MICRO, MINIATURE AND SMALL ORCHIDS

## GOODYERA PUBESCENS

**Origin:** North America

**Temperatures:** Warm to cool growing small size terrestrial / jewel orchid species

**Light:** Bright shade to bright indirect light

**Watering & fertilizing:** Regular watering and weak fertilizing year-round

**General care:** One of native North America jewel orchids is becoming popular among indoor orchid growers, but can be also planted outside in zones 4-10. Evergreen orchid with typical beautifully marbled leaves makes pretty house plant even when not in spike. Grows well under many different conditions, warm to cool, bright shade to bright indirect light. When grown in dryer zones, it prefers soil, when grown in damp zones, it can grow in moss. Should be grown potted. Great plant for terrariums, vivariums, frog encounters, glass orbs, windowsills or greenhouses and outdoors in US zones 4-10.
