

TARZANEGROUP

MICRO, MINIATURE AND SMALL ORCHIDS

LEPANTHES FILAMENTOSA

Origin: Colombia & Ecuador

Temperatures: Hot to intermediate growing micro - miniature size orchid species

Light: Bright shade

Watering & Fertilizing: Regular watering and fertilizing year-round, high humidity, only good quality water.

General care: One of the rarest micro-miniature Lepanthes species with stunning blooms, not commonly seen in collections. Grows best under warm to intermediate conditions, in shade, high humidity and good quality water. Can be grown potted or mounted, prefers warm/hot and very humid conditions. Great plant for terrariums, vivariums, glass orbs and frog encounters or outside in proper zone - we grow them in Florida outside and they do fantastic, but high constant humidity and never drying out must be provided.
