MICRO, MINIATURE AND SMALL ORCHIDS

## LEPANTHES SALTATRIX

**Origin:** Ecuador

**Temperatures:** Intermediate to hot growing miniature size orchid species

**Light:** Bright shade

**Watering & fertilizing:** Regular watering and fertilizing year-round, high humidity and good quality water.

**General care:** Super cool Lepanthes, warm/hot growing, so perfect for Florida and other hot climates. Beautiful marbled leaves produce cute blooms looking like dancing ballerina. Grows best hot to intermediate, potted or mounted, in bright shade, good air movement, moist, never letting bone dry, high humidity, good quality water and weak fertilizing. Ensure that water does not get stacked on leaves for too long. Great for terrariums, vivariums, frog encounters, glass orbs, windowsills or greenhouses or outside in proper zones.
