

TARZANEGROUP

MICRO, MINIATURE AND SMALL ORCHIDS

MACROPODANTHUS ALATUS

Origin: Asia

Temperatures: Hot to cool growing small size orchid species

Light: Shade

Watering & Fertilizing: Regular watering and fertilizing year-round, letting dry out between waterings, good air movement.

General care: By far one of our favorites! This still rare in cultivation species grows like Phalaenopsis, and produce spikes with many absolutely stunning colored and interestingly shaped blooms. Grows best under hot to cool conditions, in shade, with good air movement and letting dry out between waterings, the same like your Phalaenopsis plants. Can be grown potted or mounted. Great for outdoor growing, windowsills or greenhouses. Perfect for hot Florida outside year-round.
