MICRO, MINIATURE AND SMALL ORCHIDS

## SCHOENORCHIS SCOLOPENDRIA

**Origin:** Asia

**Temperatures:** Hot to cool growing miniature size creeping orchid species

**Light:** Bright light

**Watering & fertilizing:** Regular watering and fertilizing year-round, letting dry out between waterings

**General care:** One of my favorites and loved by all miniature orchid lovers, creeping growing habit makes this orchid attractive even when not in bloom. Easy to grow if following the culture. Grows best hot to cool, mounted with little or no moss, good air movement, good humidity letting dry out between waterings, bright shade or bright filtered light. Great for windowsills, greenhouses, glass orbs and outside in proper zones.
