

Sportfish Angler Data Collection Team

Marine Fisheries

The SADCT program is a volunteer angler program where anglers randomly collect biological data and scale samples from the targeted program species (Striped bass, black sea bass, fluke, and scup).

Biological data recorded: **total length** (measured in inches from the tip of the lower jaw when the mouth is closed to the tip of the tail), the **date of capture**, **general location**, **your name**, **fishing mode** (shore or boat), and **harvesting status** (kept/released). With the data I can then create a length at age key. Which goes into stock assessments and management models to determine if a specific species population is healthy.

If you are interested in joining the SADCT team, please provide me with:

1. **Your name**
2. **Mailing address**
3. **Phone number**
4. **Email**

I look forward to hearing from you, if you should have any questions or concerns please feel free to contact.

Cheers!

Kim
