Flood

Power outage

Corruption

Rogue employee

And more...

Incidents requiring IT DR plans

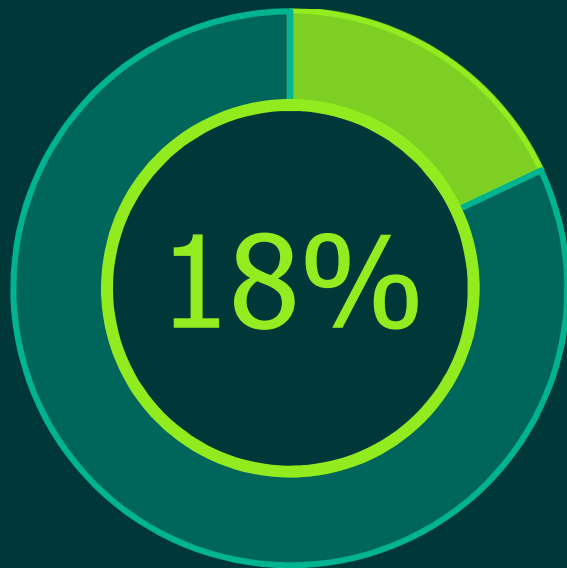

Roughly **80%** of survey respondents reported an incident during the past two years that required an IT DR plan

Incidents Requiring IT DR Plans

Base: BCM, excluding those in which activity is not included in BCM program (C01) and excluding "don't know" and "not applicable."
 Q. For the following activities, how many incidents has your organization had that required the use of a Recovery plan during the past 24 months?
 ID: 344045

Challenges

of businesses feel very prepared to **recover their data center** in the event of disaster

VEEAM

Veeam Availability Orchestrator **v2**

Non-stop operations and business acceleration for today's modern enterprise with reliable and simple-to-use BCDR orchestration, automated testing and assured compliance.

Reliable
recovery

Automated
testing

Dynamic
documentation

Reliable recovery

Ensure IT service continuity and resilience at any scale with extensible orchestration of disaster recovery and planned migrations of any app, any data at any time.

Automated testing

Prove reliability through automated testing of DR and migration plans, application patches and upgrades, DevOps and more without disruption to the organization.

What's new in v2?

Restore plans

Orchestrate and automate restores of VMware vSphere VMs backed up by Veeam Backup & Replication™ to achieve **true DR from backups**, minimizing disruption to the business caused by the downtime of critical production VMs.

Restore plans

Includes support for:

- Instant VM Recovery®
- New recovery locations
- Automated Veeam DataLabs

Scopes

Enables granular permissions at the VM group level for advanced delegation and RBAC without requiring the deployment of additional Veeam Availability Orchestrator production servers at other sites.

VM console access

Enhances user experience for additional testing, troubleshooting and verification by launching VMware VM consoles directly from the Veeam Availability Orchestrator UI.

Reporting updates

Enhanced reporting and compliance features, including the ability to define RTO and RPO properties and test against them, complete customization of all reports and achieve localization of all reports.

Thank you
