## Chestertown Armory

### **Architectural Survey File**

This is the architectural survey file for this MIHP record. The survey file is organized reverse-chronological (that is, with the latest material on top). It contains all MIHP inventory forms, National Register nomination forms, determinations of eligibility (DOE) forms, and accompanying documentation such as photographs and maps.

Users should be aware that additional undigitized material about this property may be found in on-site architectural reports, copies of HABS/HAER or other documentation, drawings, and the “vertical files” at the MHT Library in Crownsville. The vertical files may include newspaper clippings, field notes, draft versions of forms and architectural reports, photographs, maps, and drawings. Researchers who need a thorough understanding of this property should plan to visit the MHT Library as part of their research project; look at the MHT web site ([mht.maryland.gov](http://mht.maryland.gov)) for details about how to make an appointment.

All material is property of the Maryland Historical Trust.

### Describe the present and original (if known) physical appearance

The Chestertown Armory is located on the southeast edge of Chestertown in an area of mixed agricultural and medium heavy industrial uses. The brick structure is two stories tall with full basement, and emulates a medieval fortification. Attached to the rear of the 2-story main block is a narrower one-story drill hall. A modern one-story brick garage has been added at the rear of the drill hall. Very nearly the entire building has been coated with white paint; details of original brick work and trim are thereby largely obliterated.

The front (Quaker Neck Road) facade, oriented to the north is composed of two, two-bay wide sections which flank a central entranceway itself flanked by two-story towers. The side sections contain two basement windows, 4/3 casement under 4/4 casement under 4/2 panels on the first floor and 4 pane horizontal strips on the second floor. Single strip buttresses run between the windows the entire height of the side sections.

At the center of the front facade, two-story towers project slightly from the front wall plane containing 2/4 casement windows at basement level, 2/4 casement under 2/2 panel at first floor, 2/4 casement under 2 pane horizontal strip at second floor. Centered at the top of the towers are small square stone panels.

The entry is composed of double doors recessed 3-4 feet under an unpainted stone segmental arch. At second floor level 4/4 casement windows under a 4 pane horizontal strip are flanked by 2/4 casement windows under 2 pane horizontal strips. The windows are surmounted by a second segmental arch, also unpainted, projecting 1-2 feet in front of the arch over the door. A band of painted stone molding crosses the center and the center top ends slightly above the roofline of the flanking towers. A small square stone panel is centered just under the roofline of the center section.

A long asphalt topped ramp with stuccoed side walls leads from the street to the front doors.

The west side of the central block contains two windows in the southwest corner, 4/3 casement under 4 pane horizontal strips. At first floor level are two windows, also in the southwest corner, 4/4 casement under under 3/2 stationary panels. At third floor level are three windows, one per bay, 4/4 casement under 4 pane horizontal strips. Four strip buttresses, two bracketing the ends of the center block side and two between the three bays, run from water table to roof.

The east side of the center block is identical to the west side except that the basement level retains all 3 windows, and the first floor has two windows, one rear and one toward the facade. Two windows at first floor level occur in the rear and forward bays.

The rear one story drill hall over full basement is seven bays long punctuated by strip buttresses. Basement windows occur two per bay, 5/2 stationary panels with stone sills and tops under the line of stone molding corresponding to that of the water table on the front block. At first floor level are two windows per bay, 3/5 stationary panels with flat brick arches and brick sills. In the second to last bay metal stairs give access to first floor doors. The east and west sides of the drill hall are identical.

The rear wall of the drill hall reveals a lightly pitched gable roof. A one story brick garage and fenced motor compound seal the rear from the road.

**Specific dates** 1931 **Builder/Architect** unknown

**Statement of Significance (in one paragraph)** Criteria: A, C  
 Exceptions: none  
 Significance Evaluated: state

The Chestertown, Maryland Armory is primarily significant for its association with the reorganization and expansion of the National Guard system in the twentieth century. It derives additional significance from its role as a social center for its community, a function it has served continuously since its construction date. Architecturally, the building embodies the distinctive characteristics of its type, including a T shaped plan with a two-story front "head house" section and a one-story perpendicular "drill hall" extending to the rear; its facade is detailed to recall Medieval fortifications, with towers flanking the central entrance and strip buttresses. The Chestertown Armory was built in 1931 for Company G, 115th Battalion of the 29th Division of the Maryland National Guard. As part of the 29th Division, the 115th shares honors bestowed upon the group at the close of World War II, among them distinguished unit citations and the French Croix de Guerre with Palm. Various community groups rent the Armory hall for dances and cotillions, local hospital benefits, and other social functions, and the Friends of the Library hold annual trade shows there.

## DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Chestertown Armory is located on the southeast edge of Chestertown in an area of mixed agricultural and medium heavy industrial uses. The brick structure is two stories tall with full basement, and emulates a medieval fortification. Attached to the rear of the 2-story main block is a narrower one-story drill hall. A modern one-story brick garage has been added at the rear of the drill hall. Very nearly the entire building has been coated with white paint; details of original brick work and trim are thereby largely obliterated.

The front (Quaker Neck Road) facade, oriented to the north is composed of two, two-bay wide sections which flank a central entranceway itself flanked by two-story towers. The side sections contain two basement windows, 4/3 casement under 4-pane horizontal strips. At the first and second floor levels are two windows, 4/4 casement under 4/2 panels on the first floor and 4 pane horizontal strips on the second floor. Single strip buttresses run between the windows the entire height of the side sections.

At the center of the front facade, two-story towers project slightly from the front wall plane containing 2/4 casement windows at basement level, 2/4 casement under 2/2 panel at first floor, 2/4 casement under 2 pane horizontal strip at second floor. Centered at the top of the towers are small square stone panels.

The entry is composed of double doors recessed 3-4 feet under an unpainted stone segmental arch. At second floor level 4/4 casement windows under a 4 pane horizontal strip are flanked by 2/4 casement windows under 2 pane horizontal strips. The windows are surmounted by a second segmental arch, also unpainted, projecting 1-2 feet in front of the arch over the door. A band of painted stone molding crosses the center and the center top ends slightly above the roofline of the flanking towers. A small square stone panel is centered just under the roofline of the center section.

A long, asphalt topped ramp with stuccoed side walls leads from the street to the front doors.

The west side of the central block contains two windows in the southwest corner, 4/3 casement under 4 pane horizontal strips. At first floor level are two windows, also in the southwest corner, 4/4 casement under 3/2 stationary panels. At third floor level are three windows, one per bay, 4/4 casement under 4 pane horizontal strips. Four strip buttresses, two bracketing the ends of the center block side and two between the three bays, run from water table to roof.

The east side of the center block is identical to the west side except that the basement level retains all 3 windows, and the first floor has two windows, one rear and one toward the facade. Two windows at first floor level occur in the rear and forward bays.
