Work that involves diving work?	<input type="checkbox"/>	<input type="checkbox"/>

Notes:

If you answered YES to any of the questions above, you may be at risk of non-compliance with Work Health and Safety Legislation, resulting in possible enforcement action by the Regulator. The construction activities listed above are classified as High Risk Construction Work under the *Work Health and Safety Regulation 2011* and requires the preparation of a Safe Work Method Statement, otherwise known as a SWMS. The SWMS MUST be prepared *before* the high risk construction work commences. The SWMS must, amongst other things, identify the high risk work, state the hazards and risks related to the work, describe the control measures to be implemented, monitored and reviewed. It must be written in a way that is readily accessible and understandable by the persons who use it.

A copy of the SWMS must be given to the Principal Contractor before the work commences. The SWMS must take into account circumstances at the workplace, and relate to any WHS Management plan for the project (therefore the SWMS must be site-specific). All persons performing the work must do so in accordance with the SWMS and the SWMS must be reviewed and as necessary revised if control measures are revised. You can address this yourself, or contact us at Monitor Workplace Safety Pty Ltd and our qualified and experienced WHS Consultant will assist you in the process to achieve a safe and compliant workplace.

..... managing workplace safety is not necessarily as hard as having to explain why you didn't
