

ELEVATOR CONTROLLER

URC-2008

The URC-2008 Elevator Controller allows control of up to two elevator cabs with 8 floors total. Can be expanded to control up to 32 floors. It utilizes flash firmware for easy upgrades, and employs fully distributed intelligence for off-line operations. Decisions such as access level changes, schedule activation and card expiration are made by the URC-2008 controller without the need of a computer.

The panel contains on-board clock and memory backup as well as thermal overload protection. URC-2008 supports fully supervised communication via RS-485 and TCP/IP with selectable communication speed up to 56.6Kbps.

Connect to the Integra32 Server PC via IRC-2000 controllers or directly via a RS232/485 convertor, for a total of up to 16 panels per controller network.
