

Hot Tub & Spa Cleaning Directions

CLEANING DIRECTIONS WITH 1-QUART BOTTLE:

1. Fill spa to the normal full level with warm water - just above highest jet level outlet. Pour 8-ounces of ZymeAway concentrate (1/4 bottle) into the water and turn the jets on to the lowest setting, and ensure they continuously operate on low for a full 10-minutes.
2. After running for 10-minutes, turn the system OFF for 10-minutes. This will allow the enzymes time to begin the process of biodegrading the dirt, grease, grime, and debris stuck to the tubing throughout the recirculation system.
3. NOTE: If excessive foaming occurs, a few customers said to use isopropyl alcohol in a spray bottle and spray into the foam to reduce the foaming action. It is flammable so we always say use caution and keep away from children!!
4. Final Procedure: Pour an additional 8-ounces of ZymeAway concentrate into this same water and again, keeping the jets to the lowest setting and run the system for another full 10-minutes.
5. You should immediately notice debris and "gunk" emitting from the jets within the recirculating water. Use a pool skimmer (net) or large sieve to remove the bulk matter in the water and discard it into a plastic garbage bag. It is not a pretty sight, but it is no longer stuck inside the pipes or tubing or sticking to your skin.
6. Drain all remaining water and when empty, begin to clean the entire spa surfaces with a mixture of 2-oz of ZymeAway concentrate into 1-gallon of water. Pour this mixture into spray bottles and begin the cleaning and rinsing process. Spray over the entire tub surfaces, fixtures, tub, and drain areas. Gently brush this mixture into all surfaces and allow it to penetrate and lift away any film from the surfaces... for a 2-minutes. Last, rinse thoroughly with clean water and you will be good to re-fill and enjoy a relaxing hot-tub spa experience.
7. **NOTE: You should have approximately 1/2 bottle of ZymeAway concentrate remaining (if you used a quart bottle) and if you believe another cleaning is required, simply follow the above cleaning steps again. If a hot tub has not been cleaned in several months (4 or more), you will need to conduct two thorough cleaning sessions.**

Hot Tub & Spa Cleaning Directions

8. **FINAL NOTE:** You can always use 1-ounce of ZymeAway concentrate and pour it inside the water when you are enjoying the hot tub spa. The enzymes are 100% safe and will be a benefit in keeping the dirt, grease, grime, and other organic matter to a much lower level.

8oz = 1 Cup

If excessive foaming occurs use spray bottle with Isopropyl Alcohol.

Pool Skimmer
