

ClinicalPath

The impact of evidence-based oncology pathways: Proven results for cancer centers

New developments and value-based care make oncology practice more promising. Yet, it is more challenging than ever to deliver quality care and remain profitable. Predictability is your key to clinical and financial success – because predictable treatment decisions lead to more predictable outcomes and costs.

To get there, you'll need to apply evidence to every care decision and analyze the effects

of those decisions across your cancer center. To accomplish this, look to ClinicalPath for evidence-based oncology pathways in your clinical workflow and the associated analytics. Through the proven results below, learn how cancer centers like yours use ClinicalPath to

help standardize treatment, analyze and optimize their practice patterns, and run successful clinical trials programs.

Narrow the band of variability in Care Decisions. When oncology pathways are unavailable, physicians must select from multiple treatment options that

may seem equally appropriate. This causes unpredictable care variations that can increase your risk and cost. ClinicalPath's treatment recommendations are prioritized based on efficacy, toxicity and cost by a nationwide committee of oncologists, so you can give your clinicians the evidence they need in their workflow to help them make optimal treatment decisions.

STANDARDIZED TREATMENT HELPS TO REDUCE PATIENT ADVERSE EVENTS

7% On-Pathway Off-Pathway

had emergency department visits or unplanned admissions, compared to 12% of patients treated on-pathway.1 % PATIENTS VISITING ED

19% of stage 2 breast cancer patients treated off-pathway

12% On-Pathway 19% Off-Pathway

88-95%

With ClinicalPath

BIOMARKER While targeted therapies can When using ClinicalPath,

PATHWAYS SUPPORT APPROPRIATE USE OF TARGETED THERAPIES

improve patient outcomes, physicians often lack clarity around testing and treatment. A recent study found less than 25% of non-small cell lung cancer (NSCLC) patients received appropriate biomarker testing.²

ranged from 88-95%. Among suitable patients, 97% were then prescribed an appropriate targeted therapy and 3% were referred to a clinical trial.3

helped to increase adoption of appropriate hypofractionated whole breast irradiation for patients under age 50 from 4% to >95% within one year.5

AND LOWER COSTS THAN CONVENTIONAL THERAPY

to 15.8%.6 **INCREASED USE OF SINGLE FRACTIONS**

single fractions for bone metastases by 108% with

ClinicalPath, from 7.6% (in line with national rates)

The shift to value-based care requires evidence-based practice and advanced analytics. With clinical analytics from ClinicalPath, you can align your practice around recommended treatment pathways. And you can use operational analytics to improve contract negotiations and find cost-saving efficiencies.

Profile your oncology Practice Patterns at every level.

The complete, structured and accurate data from ClinicalPath will help you focus your care quality efforts to get the most benefit. **CHANGE OF TREATMENT DRUG GENERATES ANNUAL COST SAVINGS** Two health networks

annually by using ClinicalPath to enable

changes in prescribing patterns from one chemotherapy to another shown to be equally efficacious at lower cost.7 TOTAL CHEMOTHERAPY COSTS DECREASE Per-member-per-month total chemotherapy
