Solid Company • Great Management & Culture • Relocation Available

Take Your Career to the Next Level. Make a Difference.

We are retained on behalf of a Texas manufacturing operation to fill this position. Confidential client details are shared with qualified candidates during the interview process.

Foundry Engineer

FULL-TIME | EXEMPT | ENGINEERING DEPT.

Develop, document, and improve manufacturing yields by analyzing product and manufacturing methods, establishing process standards, and troubleshooting production deviations.

WHAT YOU'LL DO

- Review and advise on product and tool design for compliance, manufacturability, and cost effectiveness
- Educate process operators on procedures and process control; develop lean manufacturing methods
- Design rigging systems, fixtures, tooling, and gages
- Troubleshoot production floor issues and support timely resolution
- Document operating instructions that maintain process control
- Partner with the Quality team on key performance metrics and statistical analysis
- Lead and support continuous improvement initiatives

WHAT YOU BRING

- B.S. in a related engineering discipline
- 2–5 years of manufacturing experience preferred
- Experience with CAD (Creo, SolidWorks, or similar)
- Strong troubleshooting, project management, and communication skills
- Process capability (CP/CPK) experience and comfort presenting to cross-functional teams
