# WSAP V6 – iPhone / iOS Quick Migration Guide

**IMPORTANT – Required update for all WSAP iPhone users**

The new WSAP V6 version is distributed in a non-listed way through a direct link to the Apple App Store. Each user must verify that the latest version is installed and working before starting their next WSAP-supervised work period.

## 1 STEP 1 – Open the App Store link

**Starting Monday, September 28, 2026,** or as soon as the new version becomes available, open the WSAP App Store link provided by your supervisor or Laxson Solutions.

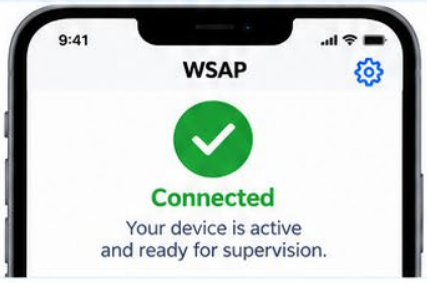

## 2 STEP 2 – Check for the update

If the button shows **Update,** tap **Update.**

If the latest version is already installed, **open WSAP.**

## 3 STEP 3 – Verify WSAP

Allow any requested permissions.

Confirm that WSAP opens normally and is connected.

Complete the recommended WSAP/SOS test according to your organization's procedure.

## 4 STEP 4 – If needed, uninstall and reinstall

If the update is not available or WSAP does not function properly, uninstall the current app.

Reopen the WSAP App Store link and reinstall the app.

Reactivate it if required.

Test it again.

**IMPORTANT** The previous WSAP version will no longer communicate with Conexgo V6.
Do not rely on WSAP for supervision until the new app has been installed, activated, connected, and tested.

For assistance, contact your supervisor or Laxson Solutions Technical Support.
