

for a much cleaner future, together!

A background image of an industrial facility, likely a refinery or chemical plant, featuring large storage tanks, complex piping, and structural steel. The image is partially obscured by a large, abstract graphic on the left side, which consists of overlapping blue and pink shapes.

# SPECIALTY CHEMICALS

specially crafted and curated industrial chemicals for effective  
cleaning and microbial reduction

## ABOUT US

**A Bangalore based Chemical Manufacturing Company that curates and crafts the perfect solutions for the Agro-commodity, Food & Beverage, Water, Brewery, Dairy and Healthcare Industries!**

**Our Specialty Chemicals are formulated to emphasize the most essential element of all - Hygiene!**

**Our three decades of expertise in the process and production industries has enlightened us that a truly safer product comes only from ensuring that the hygiene standards are immaculate and contamination is eradicated.**

**We believe that cleaning is not just an activity, but is a scientific process!**

## What is Cleaning?

*Cleaning is the process of removing dirt, dust, impurities, stains, and unwanted substances from surfaces or objects to restore their cleanliness and hygiene. It is a routine and essential practice that serves several purposes including preventing the spread of germs and disease.*

*Regular and thorough cleaning is important for maintaining a healthy and safe environment, as it helps prevent the buildup of contaminants and germs that can lead to health issues and deterioration of surfaces and objects.*

## What is Contamination?

*Contamination refers to the introduction of impurities, pollutants, or undesirable substances into a system, environment, or substance where they are not supposed to be. It can have detrimental effects on the natural world and human health.*

*Efforts to prevent contamination typically involve maintaining clean and controlled environments, following safety protocols, and implementing quality control measures to ensure that substances or systems remain free from unwanted impurities or pollutants.*

INTRODUCING

**Klensce is curated to perfect the art of cleaning  
with the right scientific process to it.**

**In simpler words, it is the science of cleaning!**

*All our chemicals are safe to use and safe for the environment*

*Kindly refer to the SDS for further information about each product.*

The background is a vibrant green with a stylized, layered design. In the center is a large, semi-transparent globe. Surrounding the globe are various elements: large, stylized leaves at the top, two white, fluffy clouds on the left and right, and a dark blue tree with blue leaves in the lower right. The bottom of the image features a blue circular shape that overlaps with a green one.

*“The objective of cleaning is not just to  
clean, but to feel happiness living  
within that environment”*

*- Marie Kondo*

*for a much cleaner future,  
together*
