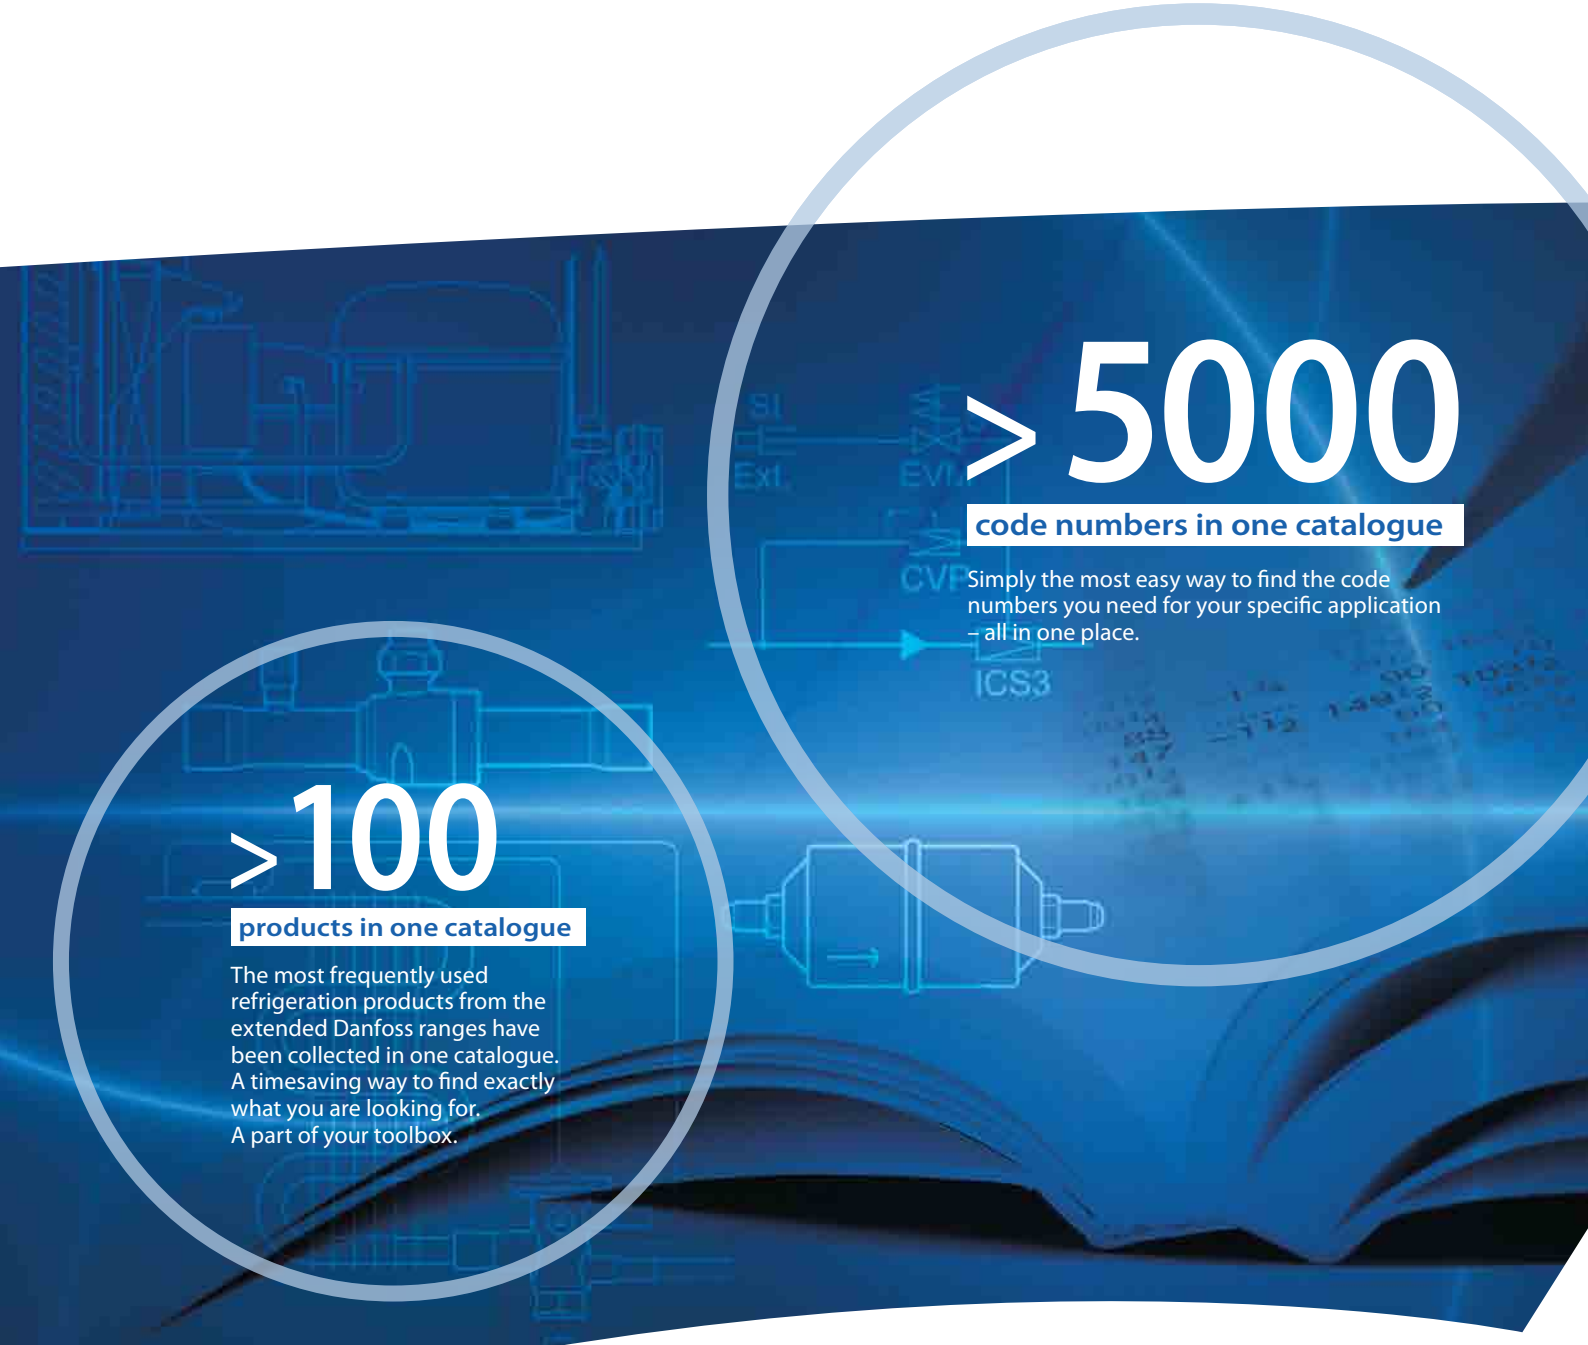
MAKING MODERN LIVING POSSIBLE

Quick Selection 2012/2013

Automatic controls, electronic controls, compressors, condensing units and packages **for all refrigerants**

This catalogue covers the most popular refrigeration products and code numbers.



>5000

code numbers in one catalogue

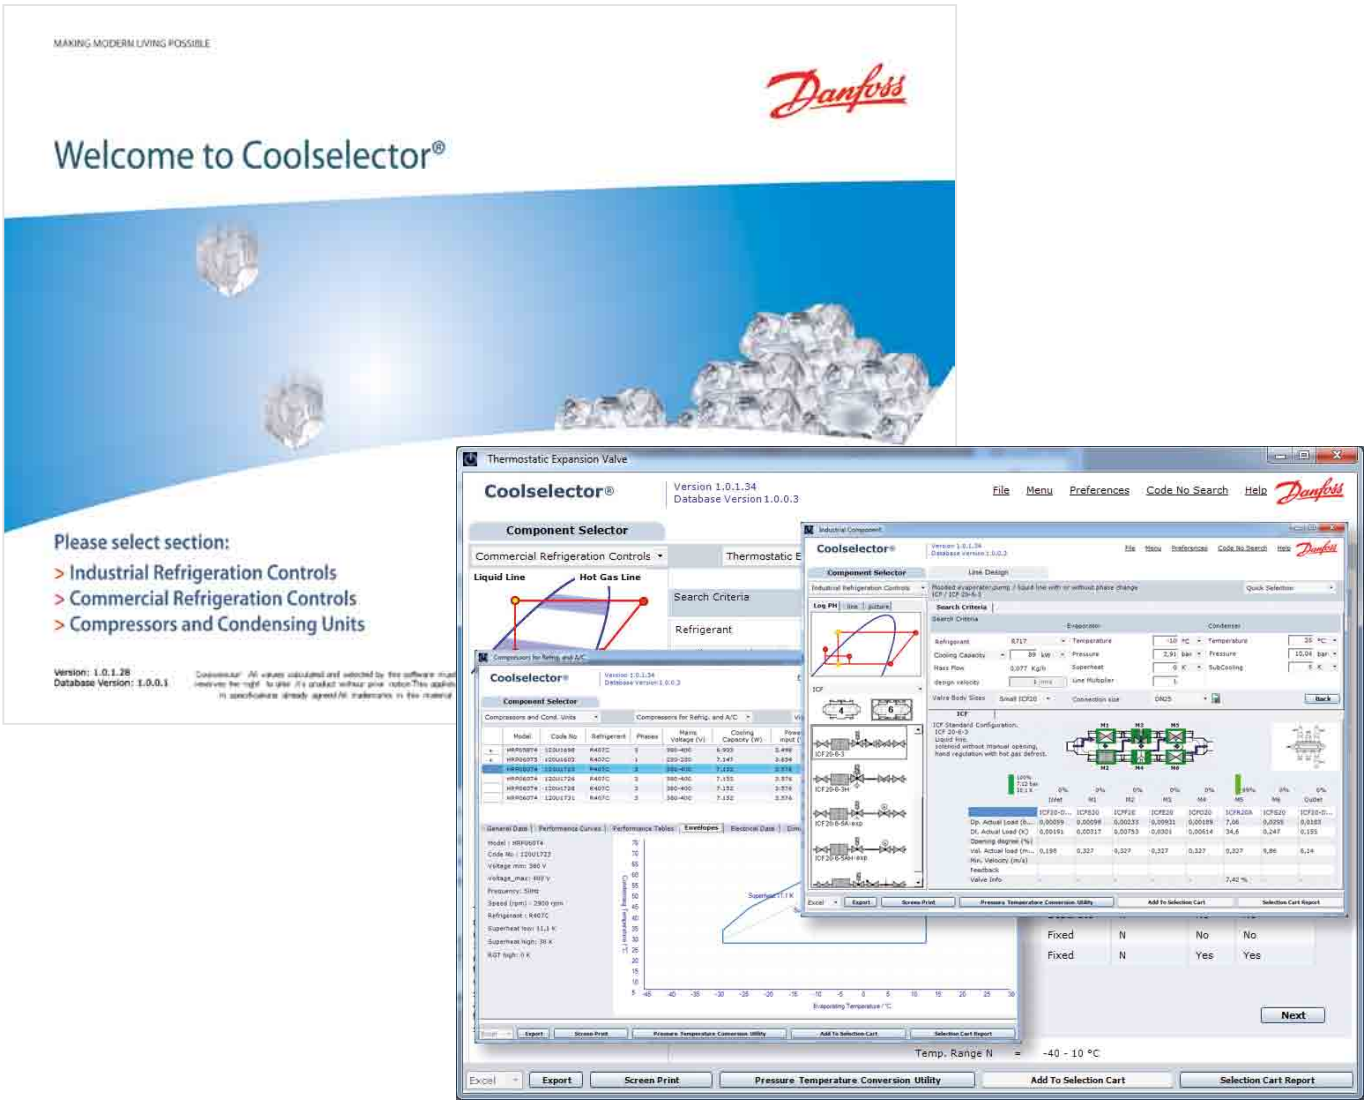
Simply the most easy way to find the code numbers you need for your specific application – all in one place.

>100

products in one catalogue

The most frequently used refrigeration products from the extended Danfoss ranges have been collected in one catalogue. A timesaving way to find exactly what you are looking for. A part of your toolbox.

www.danfoss.com.tw



Coolselector® – Select the right component the coolest way

As the world gets more complicated we all need support to make the right choices.
Danfoss helps you make the right selections also for the other components that you will need in your professional daily life.
Coolselector® calculates for you the performance of the component at your conditions, not just according to the standards.

Select the right component the coolest way

Do you pick your solenoid valve for your cold room by connection size alone?
Maybe you could actually go for a size smaller, or maybe the cold room would have done better if you had optimized the selection of that particular valve to the flow. Most professionals know that selecting a thermostatic expansion valve can turn out to be a tricky task if the conditions are not exactly standard conditions.
You will need to take superheat, sub cooling and pressure drop into consideration to find the optimal valve with the right orifice.
But also other components require consideration before selecting the best valve for the purpose. Even the solenoid valve should be checked for the specific performance under the conditions you intend to expose it to.

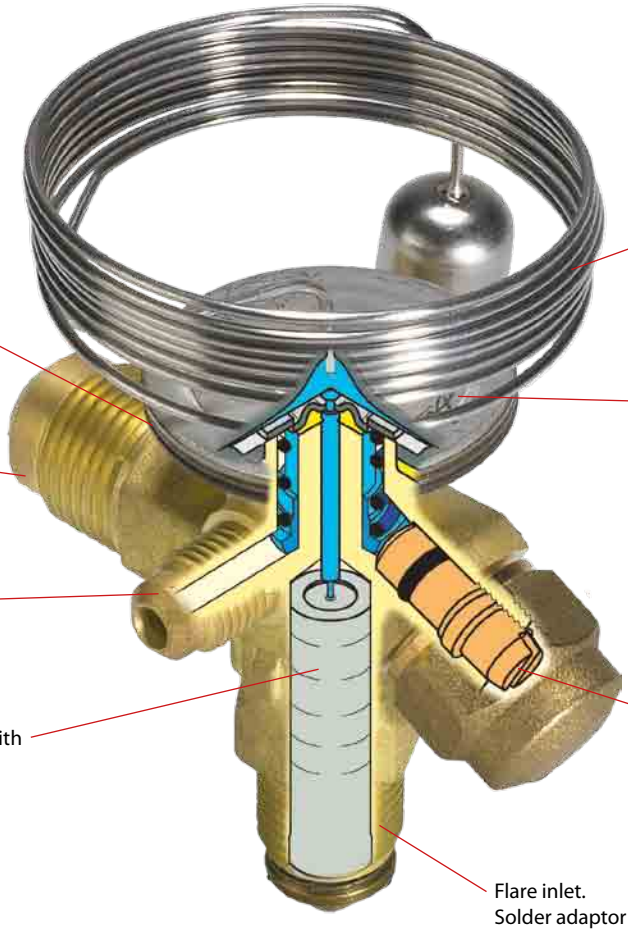
Coolselector® helps you optimize the choice of component and even tells you how the component behaves at the conditions given.
With the new version of Coolselector® you have all the components required to control a commercial refrigeration plant. Danfoss have now included the well-known compressor and condensing unit selection program RS+3 in Coolselector® which means that you no longer have to open several programs to calculate a compressor, a solenoid valve and an expansion valve. You can now do this in just one program.
The new section with compressors and condensing units also includes compressors for heat pumps which mean that you easily can select the best suited compressor for heat pump applications.
Danfoss have on purpose kept the familiar and user friendly interface from RS+3 and just extended the content in accordance with the additional compressors. Coolselector® will continue development and enhancement and offers you automatic-updates also in future.
Please do not hesitate and go to the web address: coolselector.danfoss.com to down-load the program.

Table of contents

T2/TE2 – Thermostatic expansion valves

Thermostatic expansion valves regulate the injection of liquid refrigerant into evaporators. Injection is controlled by the refrigerant superheat. Therefore the valves are especially suitable for liquid injection in "dry" evaporators where the superheat at the evaporator outlet should always be kept constant.

Features



Applications	Advantages	Facts
· Traditional refrigeration · Heat pump systems · Air conditioning units · Liquid coolers · Transport refrigeration	· Large temperature range. Equally applicable to freezing, refrigeration and air conditioning applications. · Interchangeable orifice assembly · easy stocking · easy capacity matching · better service	· Can be supplied with MOP (Max. Operating Pressure) Protects the compressor motor against excessive evaporating pressure during normal operation. · Valves for special temperature ranges can be supplied. · Flare / solder adaptor can be supplied.

The rated capacity is based on: Evaporating temperature t_e = +4.4 °C for range N, condensing temperature t_c = +38 °C, and refrigerant temperature ahead of valve t_l = +37 °C.

Solder adaptor without orifice assembly

Connection – ODF solder	Code no.
1/4 in.	068-2062
6 mm	068-2063
6 mm	068-4101[1])
3/8 in.	068-2060
10 mm	068-2061
10 mm	068-4100[1])

[1]) Including filter.

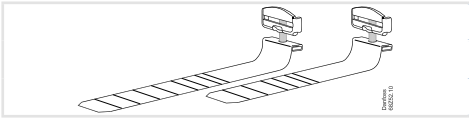
Filter

Filter type	Code no.
For flare connection	068-0003
For solder adaptor	068-0015

The adaptor is for use with thermostatic expansion valves T2 and TE2. When the adaptor is fitted correctly it meets the sealing requirements of DIN 8964.

The flare orifice in T2 and TE2 can be used with a solder adaptor when the orifice filter is replaced with a specific filter intended for solder adaptors. Only in this way the sealing requirements of DIN 8964 can be fulfilled.
Solder adaptors for filter driers (FSA) must not be used in the T2 inlet.

Bulb strap (delivered with the valve) and accessories



Type	Length	Max. diameter of suction line	Code no.
T2 / TE2 Accessories	110 mm	1 1/8" (28 mm)	068U3507
	190 mm	2" (50 mm)	067N3508

[3] Condensing temperature at bubble point.

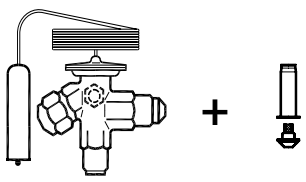
Correction factor

Refrigerant	Subcooling [K]										
	2	4	10	15	20	25	30	35	40	45	50
R134a	0.98	1	1.08	1.13	1.19	1.25	1.31	1.37	1.42	1.48	1.54
R404A/R507	0.96	1	1.10	1.20	1.29	1.37	1.46	1.54	1.63	1.70	1.78
R407C	0.97	1	1.08	1.14	1.21	1.27	1.33	1.39	1.45	1.51	1.57
R22	0.98	1	1.06	1.11	1.15	1.20	1.25	1.30	1.35	1.39	1.44

When the subcooling ≠ 4 K then:
Plant capacity / Factor = Table value

Example:
Refrigerant = R407C
Q_{nom} = 10 kW
t_e = 0°C
t_c = 55°C
Δt_{sub} = 25 K

Selection:
10 kW / 1.27 = 7.9 kW → T2, Orifice 04



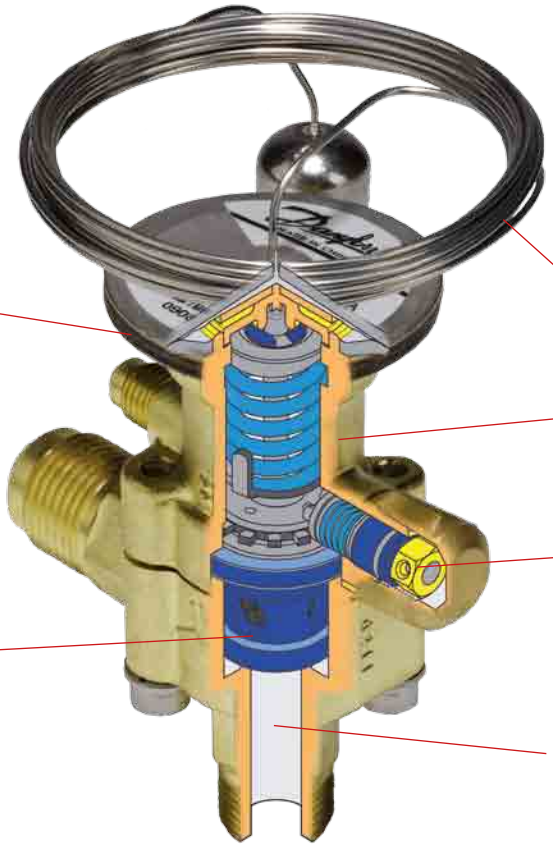
Thermostatic valve + Orifice

Notes

TE5-55 – Thermostatic expansion valves

Thermostatic expansion valves TE5-55 regulate the injection of refrigerant liquid into evaporators for medium sized plants (rated capacities from 8 kW to 182 kW for R404A/R507). Injection is controlled by the refrigerant superheat. Therefore the valves are especially suitable for liquid injection in "dry" evaporators where the superheat at the evaporator outlet should always be kept constant.

Features



Laser-welded power element in stainless steel
- longer diaphragm life
- high pressure tolerance and working pressure
- high corrosion resistance

Stainless steel capillary tube and bulb
- high corrosion resistance
- high strength and vibration resistance

Large parts program ensures minimal stocks

Easy adjustment of superheat setting

To ensure long operating life, the valve cone and seat are made of a special alloy with particularly good wear qualities.

More connection possibilities
- solder × solder
- flare × flare
- flanges
- straightway or angleway

Applications	Advantages	Facts

· Traditional refrigeration
· Air conditioning units
· Ice cube machines
· Water chillers
	· Interchangeable orifice assembly designed for:
	  · Easy assembly and mounting
	  · Optimised capacity matching
	  · Balanced port (TE55 only)
	· Large temperature range –60 to +10°C
		· Available with MOP (Max. Operating Pressure). Protects the compressor motor against excessive evaporating pressure.
		· Refrigerants: R22, R134a, R404A/R507, R407C
		· Maximum Working Pressure: 28 bar

The rated capacity is based on:
Evaporating temperature t_e = +4.4 °C
Condensing temperature t_c = +38 °C
Refrigerant temperature ahead of valve t_l = +37 °C

[1)] ODF × ODF
[2)] ODF × ODM
[3)] ODM × ODM
ODF = Internal diameter
ODM = External diameter

When the subcooling ≠ 4 K then:
Plant capacity / Factor = Table value

Example:
Refrigerant = R404A
Q_{nom} = 10 kW
t_e = -10°C
t_c = 45°C
Dt_{sub} = 25 K

Selection:
10 kW / 1.46 = 6.85 kW → TE5, Orifice 01

Thermostatic element + Orifice + Valve body

Capacities

Capacity in kW, range N -40 °C to +10 °C. Opening superheat sh= 4.4 K

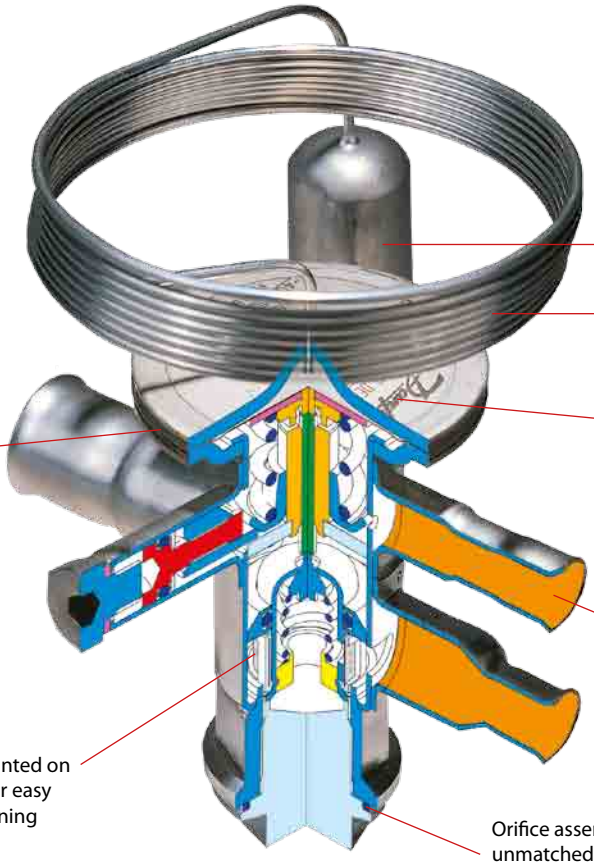
TUA/TUAE/TCAE – Thermostatic expansion valves

Thermostatic expansion valves regulate the injection of liquid refrigerant into evaporators. Injection is controlled by the refrigerant superheat. Therefore the valves are especially suitable for liquid injection in "dry" evaporators where the superheat at the evaporator outlet should always be kept constant.

Features



Applications	Advantages	Facts
· Traditional refrigeration · Heat pump systems · Air conditioning units · Liquid coolers · Ice cube machines · Transport refrigeration	· The use of stainless steel makes the valves light and strong. · Bi-metal connections for safe, fast and convenient soldering. · Stainless steel capillary tube for superior strength and ductility. · Allen key superheat setting screw is convenient and space-saving compared to the standard screwdriver adjustment used in most conventional valves.	· Can be supplied with MOP (Max. Operating Pressure) Protects the compressor motor against excessive evaporating pressure during normal operation. · Valves for special temperature ranges can be supplied. · Only 4 K opening superheat. · Bi-flow function.

[3] Condensing temperature at bubble point.

Correction factor

Refrigerant	Subcooling [K]										
	2	4	10	15	20	25	30	35	40	45	50
R22	0.98	1	1.06	1.11	1.15	1.20	1.25	1.30	1.35	1.39	1.44
R134a	0.98	1	1.08	1.13	1.19	1.25	1.31	1.37	1.42	1.48	1.54
R404A / R507	0.96	1	1.10	1.20	1.29	1.37	1.46	1.54	1.63	1.70	1.78
R407C	0.97	1	1.08	1.14	1.21	1.27	1.33	1.39	1.45	1.51	1.57
R410A	0.97	1	1.08	1.15	1.21	1.27	1.33	1.39	1.45	1.50	1.56

When the subcooling ≠ 4 K then:
Plant capacity / Factor = Table value

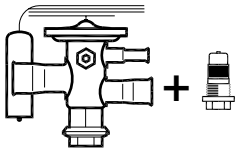
Example:
Refrigerant = R134a
Q_{nom} = 8 kW
t_e = –10 °C
t_c = 55 °C
Δt_{sub} = 25 K

Selection:
8 kW / 1.25 = 6.4 kW → TU, Orifice 09

	Orifice / Superheat	
	Interchangeable	Adjustable
A	Yes	YES
B	NO	YES
C	NO	NO

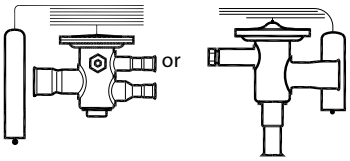
N = –40°C → +10 °C
NM = –40°C → –5 °C with MOP
NL = –40°C → –15 °C with MOP
B = –60°C → –25 °C with MOP

TUA(E)
TCAE



Thermostatic valve | Orifice

TUB(E)
TUC(E)
TCBE
TCCE



Thermostatic valve incl. orifice

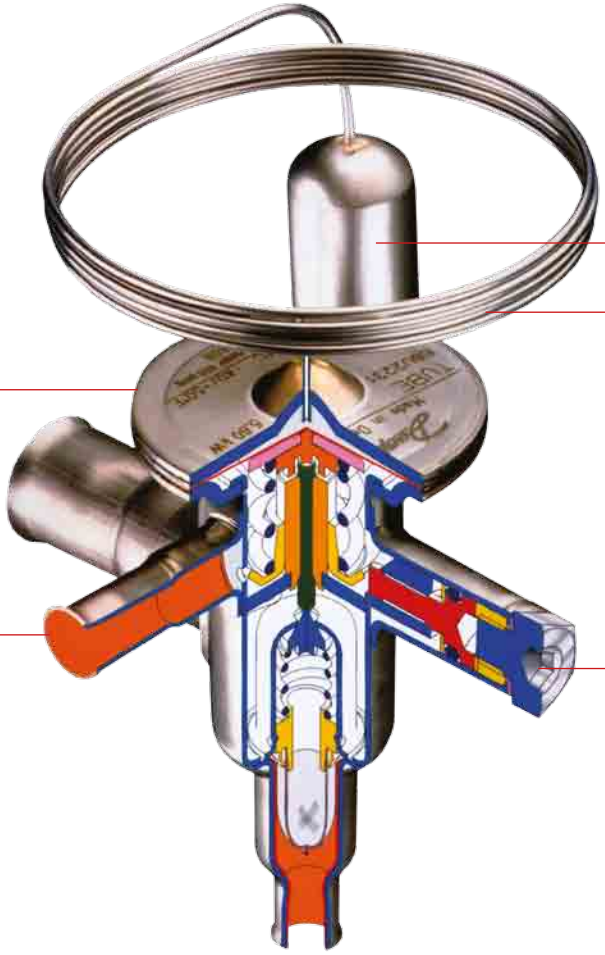
Valve types TUB(E)/TUC(E) and TCBE/TCCE can be replaced by TUA(E) and TCAE types

Notes

TUB/TUBE – Thermostatic expansion valves

The TUB / TUBE serie is delivered with fixed orifice. The thermostatic expansion valves has been developed for soldering into hermetic refrigeration systems.
TU valves are made of stainless steel and are therefore very suitable for use in the food industry.

Features



Capillary tube and bulb in stainless steel. Extremly strong and corrosion resistant.

Laser welded stainless steel thermostatic element for unsurpassed joint strength and operational lifetime

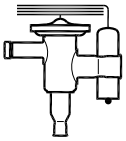
Bi-metal connections Stainless steel with rolled on copper cladding for safe, fast and convenient copper-to-copper soldering

Allen key superheat setting screw is convenient and space-saving compared to the standard screwdriver adjustment used in most conventional valves

Applications	Advantages	Facts
· Traditional refrigeration · Heat pump systems · Air conditioning units · Liquid coolers · Ice cube machines · Transport refrigeration	· The use of stainless steel makes the valves light and strong. · Bi-metal connections for safe, fast and convenient soldering. · Stainless steel capillary tube for superior strength and ductility.	· Can be supplied with MOP (Max. Operating Pressure) Protects the compressor motor against excessive evaporating pressure during normal operation. · Valves for special temperature ranges can be supplied. · Only 4 K opening superheat. · Bi-flow function.

Technical data and ordering

Ordering
Angleway
Supplied with bulb strap
Standard valve range



Range N = –40 → +10°C

Valves with inch connections have 1/4 in. pressure equalisation.
Valves with mm connections have 6 mm pressure equalisation.

[1] Rated capacity $Q_{nom.}$ is based on:
Evaporating temperature
t_e = +4.4 °C
Condensing temperature
t_c = +38 °C
Refrigerant liquid temperature
t_l = +37 °C
Opening superheat
OS = 4 K

[2] TUBE with orifice 0 and 9 and all TUB (internal pressure equalisation) cannot be used for biflow operation.

[3] For R407C plants, please select valves from the dedicated R407C program

[4] Capillary tube length 0.8 m

Valves with inch connections have ¼ in. pressure equalisation.
Valves with mm connections have 6 mm pressure equalisation.

When the subcooling ≠ 4 K then:
Plant capacity / Factor = Table value

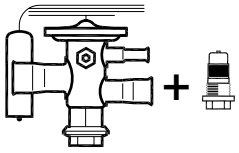
Example:
Refrigerant = R134a
Q_{nom} = 8 kW
t_e = –10°C
t_c = 55°C
Δt_{sub} = 25 K

Selection:
8 kW / 1.25 = 6.4 kW → TU, Orifice 09

	Orifice / Superheat	
	Interchangeable	Adjustable
A	Yes	YES
B	NO	YES
C	NO	NO

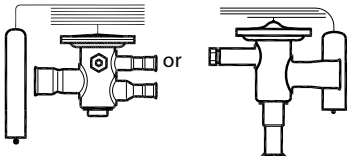
N = –40°C → +10°C
NM = –40°C → –5°C with MOP
NL = –40°C → –15°C with MOP
B = –60°C → –25°C with MOP

TUA(E)
TCAE



Thermostatic valve Orifice

TUB(E)
TUC(E)
TCBE
TCCE



Thermostatic valve incl. orifice

Valve types TUB(E)/TUC(E) and TCBE/TCCE can be replaced by TUA(E) and TCAE types

Capacities

Capacity in kW, range N -40 °C to +10 °C. Opening superheat sh= 4.4 K

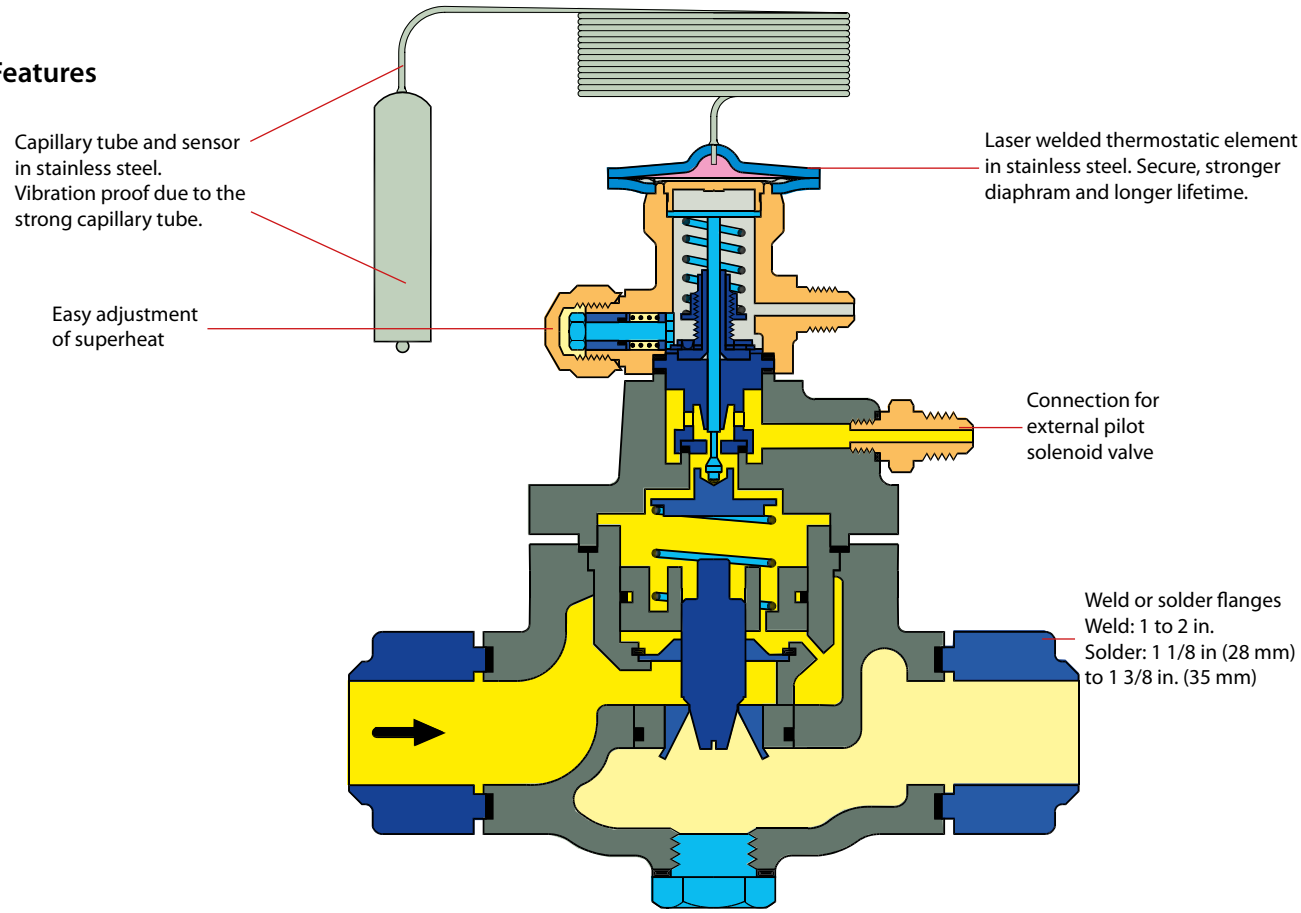
PHT – Thermostatic expansion valves

PHT thermostatic expansion valves regulate the injection of refrigerant liquid into evaporators.
Injection is controlled by the refrigerant superheat.
Therefore the valves are especially suitable for liquid injection in "dry" evaporators where the superheat at the evaporator outlet is proportional to the evaporator load should always be kept constant.

Features



Applications	Advantages	Facts
· Traditional refrigeration and freezing applications · Water coolers and air conditioning	· *Interchangeable orifice assembly* - easier stocking - easy capacity matching - better service. · *Very tight main orifice* Also used as solenoid valve (not PHT 300) · *Superheat* Static superheat SS can be adjusted with setting spindle.	· *Maximum working pressure* - PHT 85 and 125: PS / MWP = 28 bar - PHT 300: PS / MWP = 20 bar · *Rated capacities from 113 to 1944 kW* (32 to 554 TR) for R22 · Can *be supplied with MOP* (Max. Operating Pressure) Protects the compressor motor against excessive evaporating pressure · *Range*: –40 to +50°C

[3] Condensing temperature at bubble point.

Correction factor

Refrigerant	Subcooling [K]										
	2	4	10	15	20	25	30	35	40	45	50
R22	0.98	1	1.06	1.11	1.15	1.2	1.25	1.3	1.35	1.39	1.44
R134a	0.98	1	1.08	1.13	1.19	1.25	1.31	1.37	1.42	1.48	1.54
R404A	0.96	1	1.1	1.2	1.29	1.37	1.46	1.54	1.63	1.7	1.78
R407C	0.97	1	1.08	1.14	1.21	1.27	1.33	1.39	1.45	1.51	1.57

When the subcooling ≠ 4 K then:
1. Table value × Factor = Plant capacity
2. Plant capacity/Factor = Table value

Example:
Refrigerant = R134a
Q_o = 130 kW
t_o = -10 °C
t_c = 45 °C
Δt_u = 25 K

Selection:
130 kW : 1.25 = 104 kW = PHT 85, Orifice 03 ✓

Product overview
Complete Danfoss program of thermostatic expansion valves:

Thermostatic Expansion valves with exchangeable orifice

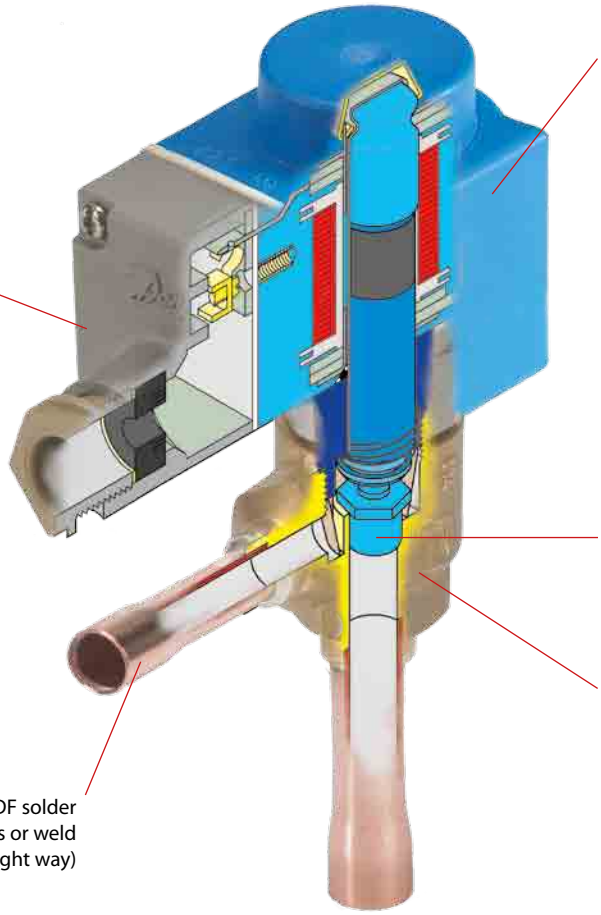
Thermostatic expansion valves – PHT overview

AKV – Electronically operated expansion valves

AKV are electrically operated expansion valves designed for refrigerating plant.
The AKV valves are normally operated by a controller from the Danfoss ADAP-KOOL® range.
The valves are operated in pulse-width modulation. This means that the valve is either completly open or completly closed.

Features



Applications	Advantages	Facts
· Traditional refrigeration · Cold rooms · Water chillers	· The AKV valves are supplied as a part programme, as follows: - Separate valve incl. exchangeable orifice - Separate coil · The valve requires no adjustment	· The AKV 10 valves cover a capacity range from 0.6 kW to 14 kW (404A/R507) and are divided into 7 capacity ranges. · The AKV 15 valves cover a capacity range from 14 kW to 85 kW (404A/R507) and are divided into 4 capacity ranges. · The AKV 20 valves cover a capacity range from 56 kW to 530 kW (404A/R507) and are divided into 5 capacity ranges. · The AKV valves can be used for HCFC, HFC and R744 (up to the stated max. working pressure) refrigerants.

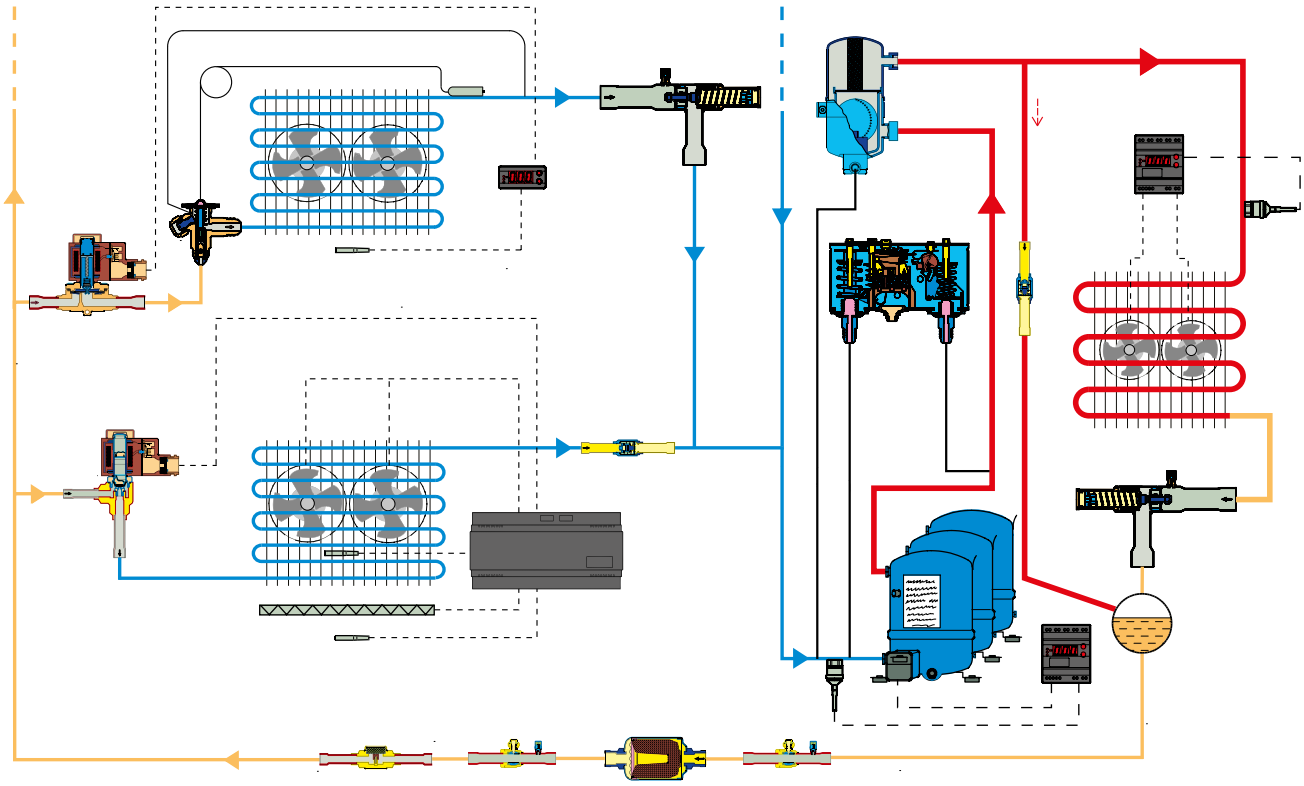
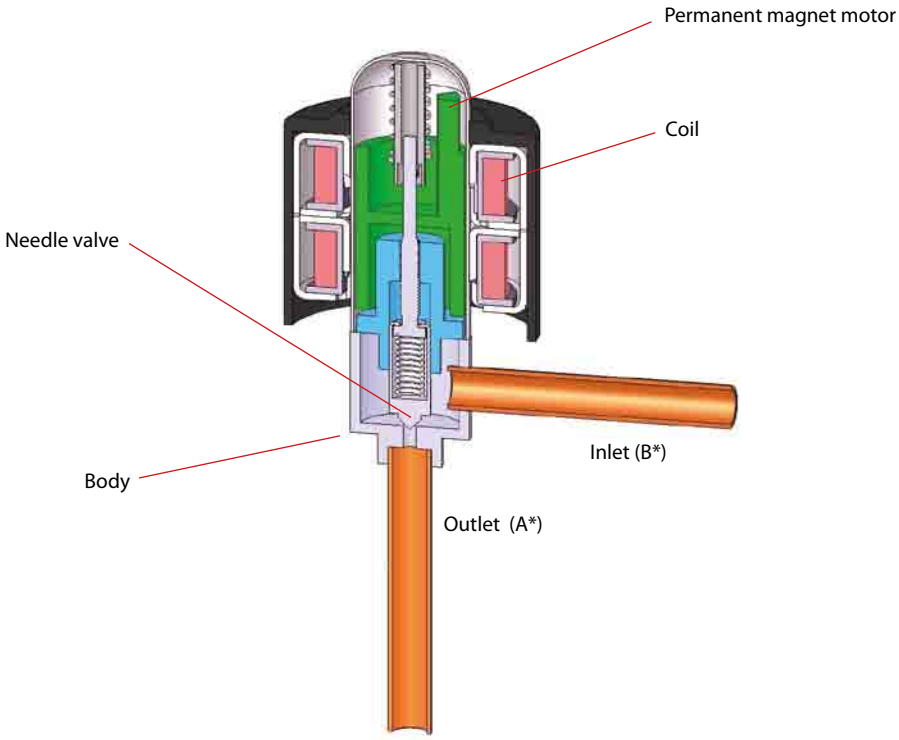
Application example



ETS 6 – Electronic expansion valves

Compact and lightweight, the current range are available with different capacities, and can be used with all common refrigerants (e.g R410A, R407C, R404A, R134a, R22). Bi-flow operation is also possible for reversible system such as heat pumps.
The valve design uses uni-polar drives, and different control solutions exist that are compatible with uni-polar drives.

Features



Cross section diagram of ETS 6 series
* Refers to refrigerant flow in cooling mode

Applications	Advantages	Facts
· Heat Pumps · Modular Air Cooled Chillers · VRF, Multi Split · Inverter Mini Split · Bus air conditioning · IT cooling	· Precision flow control with high resolution · Proven know-how and high reliability · Power saving design that enables energy efficiency. · Compact & lightweight hermetic design with removable coil · Bi-flow operation for reversible systems	· ETS 6 are designed for HFC/HCFC conditions including R410A, providing 47 bar (670 psig) working pressure. · EIM 336, EKD 316 and MCX are examples of Danfoss controllers with drivers matching the ETS 6 needs. · For manual operation and service of ETS 6 valves an AST-g service driver is available.

Technical data

Maximum working pressure	47 bar (670 psig), 48 bar (680 psig) in abnormal condition
Compatible refrigerants	HFC, HCFC (e.g. R22, R134a, R404A, R407C, R410A, R507)
Refrigerant oil	All mineral oils and ester oils (to lubricate ETS 6 valve)
Ambient temperature	-30°C to 60°C (-22 °F to 140° F)
Fluid Temperature	-30°C to 70°C (-22 °F to 158° F)
Durability	Tested for 60 Million total pulses supplies to the valve during partially open valve, which is comparable to 150,000 cycles if the valve is operated between 100 to 300 pulses open. Tested for 30,000 full stroke cycles including 20 pulse overdrive at each closing.
Ambient humidity	95% RH or less
Modulation	Permanent magnet type direct operating stepper motor
Excitation method	1-2 phase
Electrical connection	JST XHP-6 and JST XHP-5
Excitation speed	min. 30 pps (pulses per second) to max. 90 pps, recommended 31.3 pps
Operating range	0 to 480 pulses, no holding power required (NOTE: do not apply more than 520 pulses)
Full motion transit time	e.g. 16 sec @ 30 pps, 6 sec @ 80 pps
Installation position **Liquid line solenoid valve**	With coil on the upper side and the valve/coil assembly within ±15˚of the vertical axis If using a liquid line solenoid valve, it must be installed in such a way that it does not create liquid hammering in ETS 6 valve
Max. coil winding temperature	115°C (239° F)

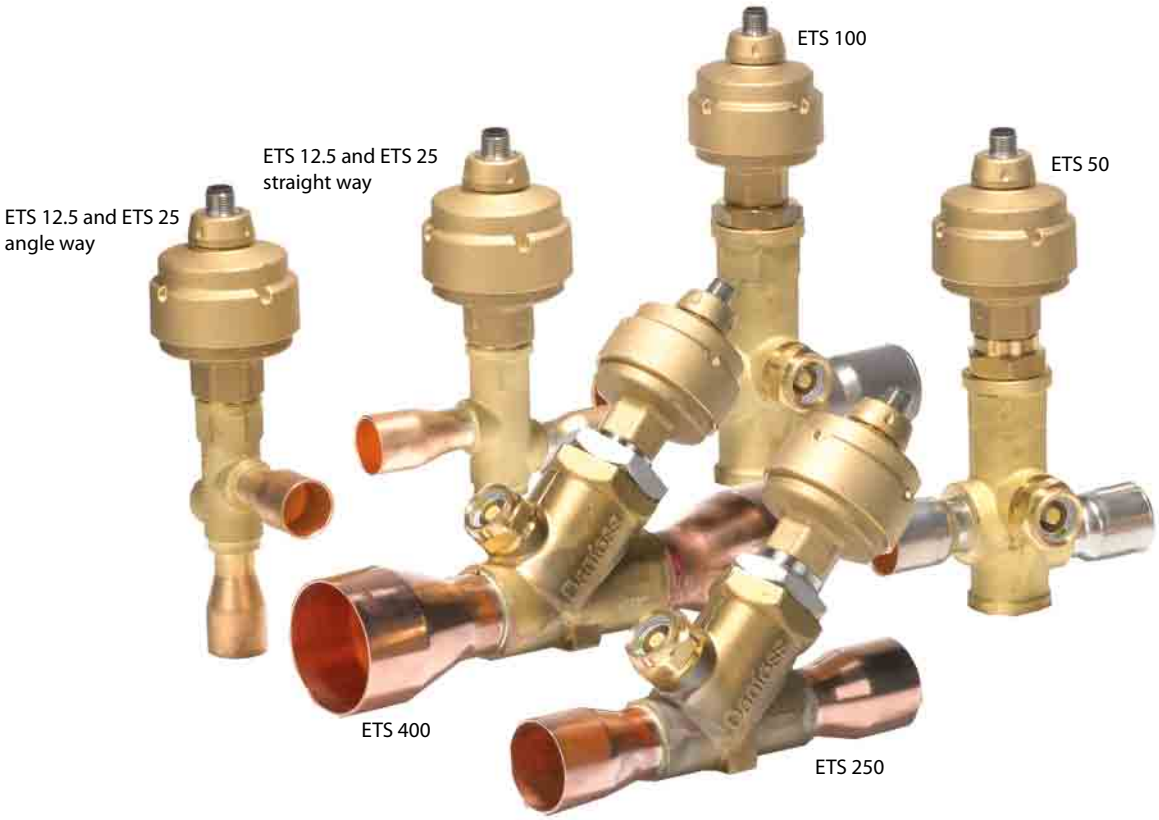
ETS 12.5 - 400 – Electronic expansion valves

ETS is a series of electrically operated expansion valves for precise liquid injection in evaporators for air conditioning and refrigeration applications.
The valve piston and linear positioning design is fully balanced, providing bi-flow feature as well as solenoid tight shut-off function in both flow directions.
The ETS needs a current or voltage driver as partner to be operated.



Applications	Advantages	Facts
· Heat pumps · Refrigeration · Air conditioning · Chillers	· Precise positioning for optimal control of liquid injection. · Balanced design (ETS 12.5 to 400) providing bi-flow operation as well as solenoid tight shut-off function in both flow directions. · Lower energy consumption · ETS 50 & ETS 100 feature improved process and productivity due to waterless brazing i.e soldering without wet cloth for cooling. · ETS 50 to 400 are all designed with built-in sight glass with moisture indicator. · Internal and external corrosion resistant design	· ETS valves are compatible with wide range of all common refrigerants, HFC, HCFC. · ETS 12.5, ETS25, ETS 50, ETS100 provides working pressure of 45.5 bar (660 psig) and ETS 250, ETS 400 provides 34 bar (493 psig). · EKC316A, 312 and EKD316 are examples of Danfoss controllers with drivers matching the ETS needs. · Equipped with M12 connector for cable connection (cable and connector assemblies as accessories) · For manual operation and service of ETS valves an AST-g service driver is available.

CCM – Electrically operated valves for CO_2

The CCM is an electrically operated valve designed specifically for operation in CO_2 systems. The valve is capable of functioning both as an expansion valve, and as a gas bypass valve with back-pressure regulation in subcritical applications.
The pressure rating allows for operation in environments where system standby capability is required without the need for auxiliary cooling systems during servicing or power outages.

Advantages and features

- Up to 90 bar (1305 psi) working pressure to accomodate CO_2 system pressures during standstill conditions.
- Precise positioning for optimal control of intermediate pressures in transcritical CO_2 systems or liquid injection in heat exchangers.
- Possibility of bi-flow operation
- MOPD up to 50 bar (725 psi)
- Combined stainless steel butt weld/solder connections for installation in copper piped systems (K65 alloy or standard) as well as steel piped systems.
- Standard M12 connector for simple and flexible connection to the motor driver.
- For manual operation and service of the CCM an AST-g service driver is available.

CCMT – Electrically operated valves for transcritical and subcritical CO_2 applications

The CCMT is an electrically operated valve designed specifically for operation in CO_2 systems. The valve is capable of functioning either as an expansion valve, as a pressure regulator for the gascooler or as a gas bypass valve with back-pressure regulation in transcritical or subcritical applications.

Advantages and features

- Designed for high pressure CO_2 systems with maximum working pressure of 140 bar / 2030 psig.

  Applicable to other common refrigerants as well. The CCMT is not applicable for flammable refrigerants and ammonia.

  The CCMT is compatible with the oil types PAG, POE and PVE
- Regulating cone ensures optimum regulating accuracy, particularly at part load.
- Patented cone and balance design
- The PEEK seat provides excellent valve tightness and robustness.
- Combined butt weld and solder connections
- Top part with built-in strainer
- MOPD up to 90 bar (1305 psi)
- Standard M12 connector for simple and flexible connection to the motor driver.
- For manual operation and service of the CCMT an AST-g service driver is available.
- Low weight and compact design.
- Easy to service. Insert easily taken out by removing top part.

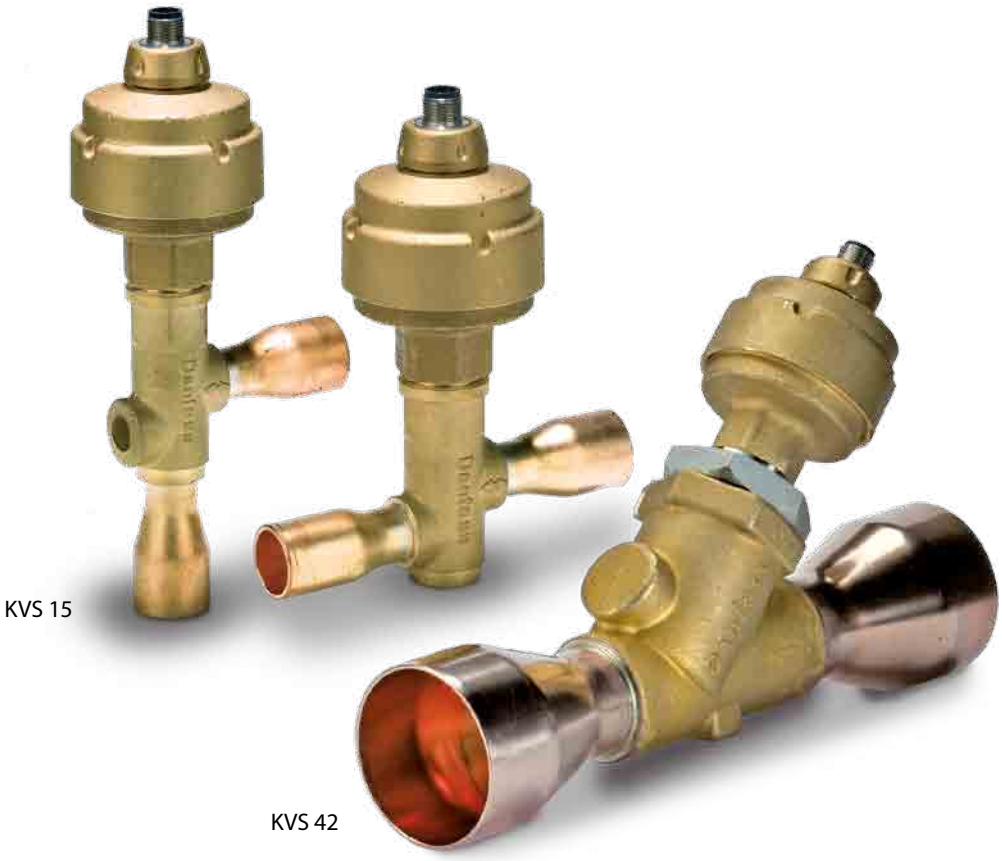
KVS – Electrically operated suction modulating control valves

KVS is a series of electrically operated suction modulating control valves for AC transport and refrigeration applications. Accurate temperature or pressure control is obtained by modulating the refrigerant flow in the evaporator with a current or voltage driver.
With an EKC 368 controller (current driver) and an AKS sensor placed in the media to be controlled, an accuracy better than ± 0.5K can be obtained. The balanced design provides bi-flow operation as well as solenoid shut-off function in both flow directions at MOPD 33 bar (478 psi).



KVS 15

KVS 42

Applications	Advantages	Facts
· Refrigeration · Air conditioning · AC transport · Supermarket	· Biflow · High resolution for precise control. · Low power consumption. · Corrosion resistant design external as well as internal. · Solenoid tight shut off.	· KVS is designed for all common refrigerants HFC, HCFC. · Balanced port design (KVS 42). · For manual operation and service of KVS valves an AST-g service driver is available. · Cable and connector assemblies as accessories.

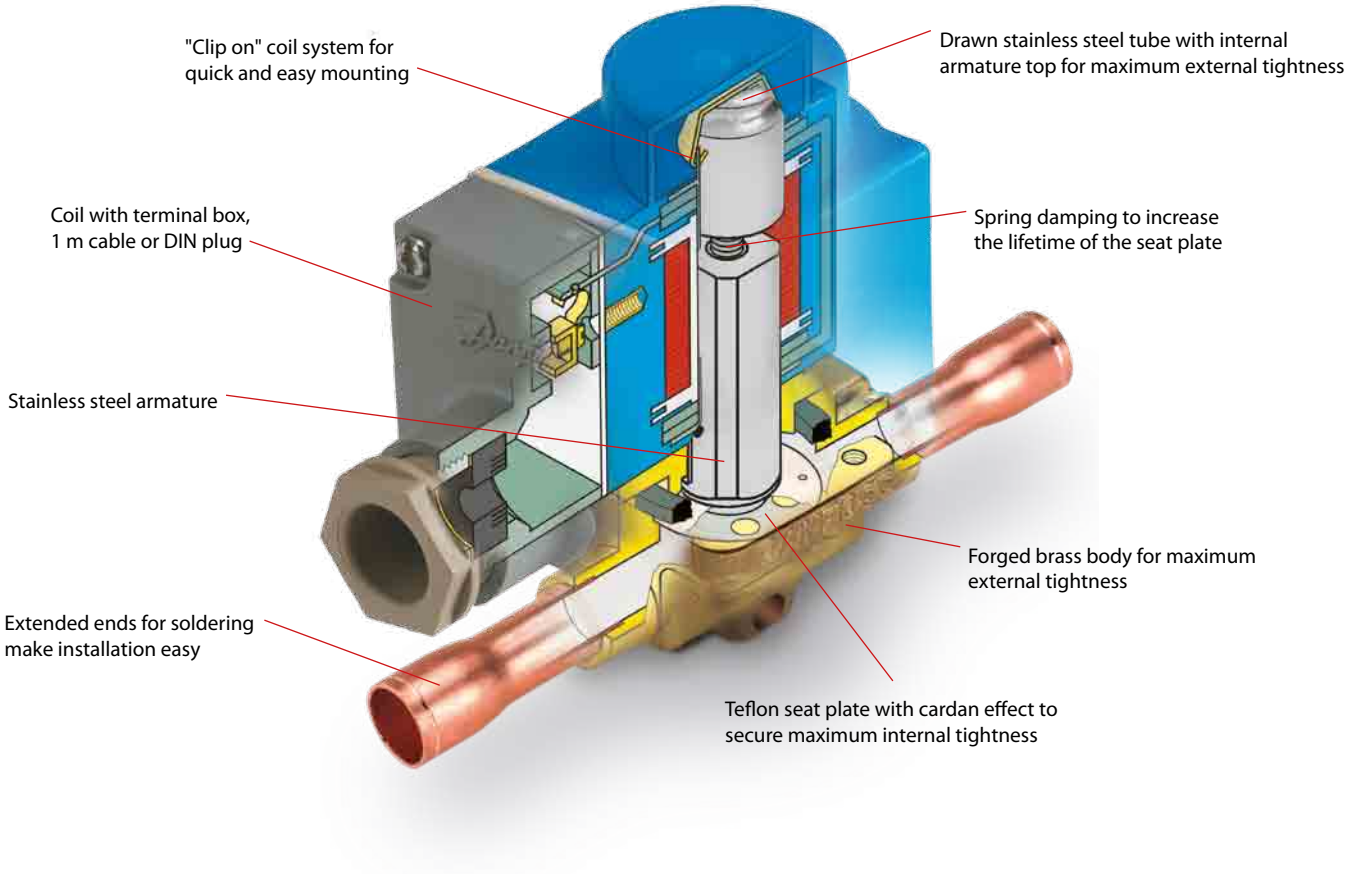
Notes

EVR/EVRH - Solenoid valves and coils

EVR valves are direct or servo-operated solenoid valves for liquid, suction and hot gas lines. They are suitable for condensing units and power packs in all refrigeration, freezing and air conditioning applications and are compatible with fluorinated refrigerants, including high-pressure refrigerants such as R410A (EVRH). The valves can be delivered as normally open and normally closed valves as well as with or without manual operation.

Features



Applications	Advantages	Facts
· Traditional refrigeration · Heat pump systems · Air conditioning units · Liquid coolers · Transport refrigeration	· Complete programme of valves and coils for every application. · Wide range of coils for a.c. and d.c. · Wide range of connection types and sizes. · Normally open or normally closed. · With or without manual operation. · High reliability and durability due to maximum internal and external tightness.	· Can be used for all fluorinated refrigerants (CFC, HCFC and HFC). · Temperature range: –40 to 105°C · Max. working pressure (MWP) 32 bar (EVR 2-6, 45.2 bar / EVR 10, 35 bar / EVR 15-40, 32 bar / EVRH 10-20, 45.2). · MOPD up to 25 bar with 12 W a.c. coil. · 100% test of functionality, internal/external leakage and electrical characteristics.

[1] The k_v value is the water flow in m^3/h at a pressure drop across valve of 1 bar, $\rho = 1000$ kg/m^3.

EVRS/EVRST – Solenoid valves and coils

EVRS and EVRST are valves made of stainless steel. EVRS 3 is direct operated. EVRS 10, 15 and 20 are servo operated. EVRST 10,15 and 20 are forced servo operated valves used in liquid, suction, hot gas and oil return lines with ammonia or fluorinated refrigerants.

Advantages and features

- Stainless steel valve body and connections
- Max. working pressure 50 barg (suitable for CO_2 subcritical).
- Used for ammonia and all fluorinated refrigerants
- MOPD up to 38 bar with 20 watt a.c. coil
- Wide choice of a.c. and d.c. coils
- Designed for temperatures of media up to 105°C
- Manual stem on EVRS and EVRST 10, EVRST 15 and EVRST 20

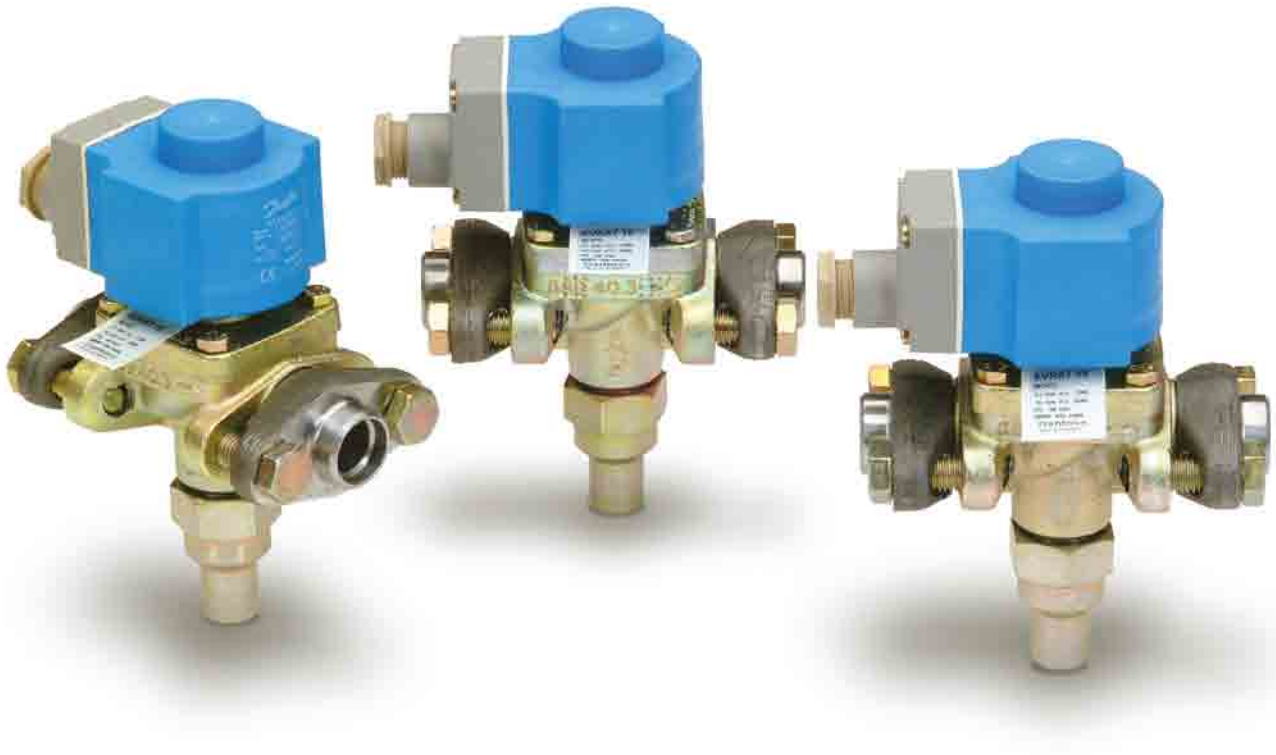
Recommended use for EVRH with high MOPD (38 bar)

EVRA/EVRAT – Solenoid valves/coils

EVRA is a direct or servo operated solenoid valve for liquid, suction and hot gas lines with ammonia or fluorinated refrigerants. EVRA valves can be supplied as complete valves or as components, i.e. valve body, flanges and coils. EVRAT has capacities similar to the EVRA but has the advantage of no opening pressure differential is needed – it will open – and stay open, also when there is no flow through that valve.



Advantages and features

- EVRA and EVRAT valves can be used for all non-flammable refrigerants, including R 717, and non-corrosive gases/liquids – assuming seals of correct material are used
- EVRA and EVRAT valves uses a teflon gasket which ensures a very high tightness across valve seat
- EVRA valves has a low pressure drop
- EVRAT valves has a minimal opening differential pressure of 0 (zero)
- The EVRA and EVRAT valves offers a wide range of flange connection dimensions in accordance with standards: DIN ANSI, SOC, SA and FPT
- The EVRA and EVRAT valve range can be used with the wide range of standard Danfoss coils
- Strainer type FA can be mounted directly on the valve body except for EVRA 32 and 40

Connections

There is a wide range of connection possibilities with EVRA 3 to 25 and EVRAT 10-20:

- Butt welding DIN (2448)
- Butt welding ANSI
  (3/8 - 1½ in. B36.10 schedule 80, 2 in. B36.10 schedule 40)
- Socket welding ANSI (B 16.11)
- Solder connection DIN (2856)
- Solder connection ANSI (B 16.22
- FPT internal thread, NPT (ANSI/ASME B 1.20.1)

EVRA 32 and 40 are supplied with integrated flanges for either:

- Welding DIN (2448) or
- Welding ANSI (B 36.10)

See "Opening differential pressure" under "Technical data" for the valve concerned.

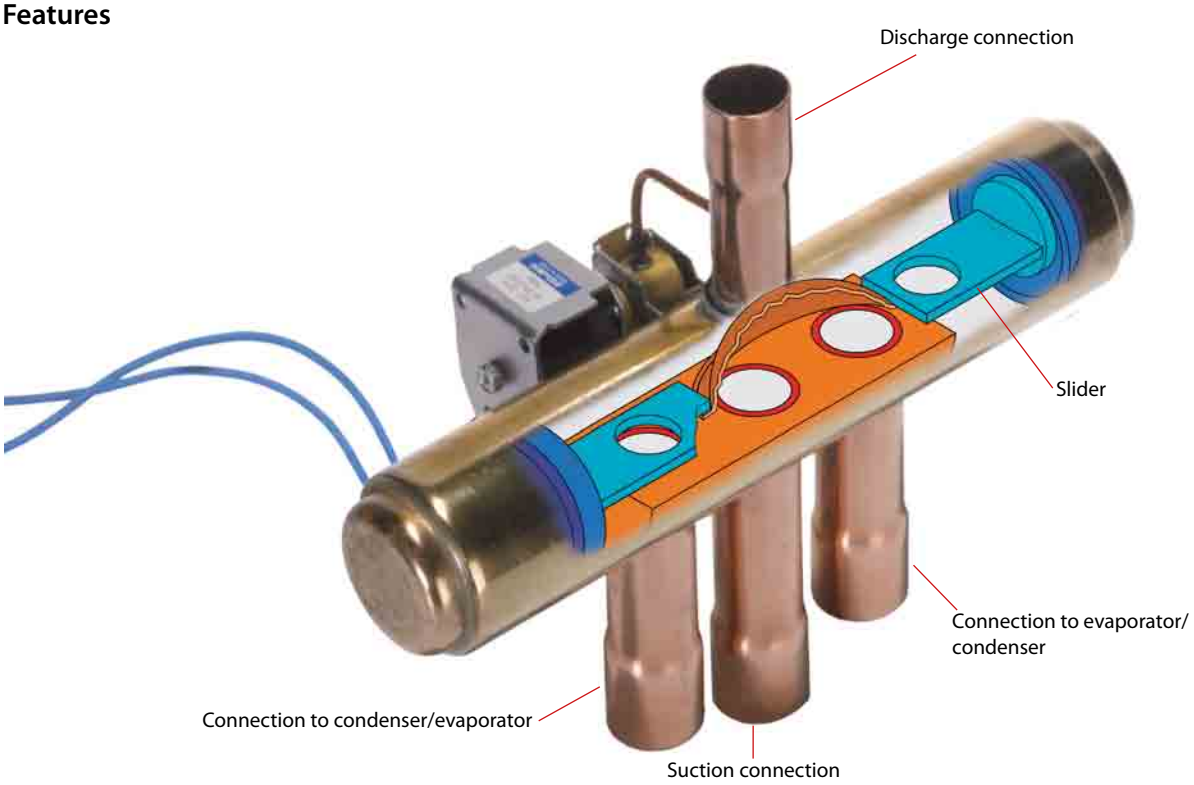
*) Indicates voltage and frequency
**) Can only be used with DIN socket
***) When replacing a coil with terminal box, it is sufficient to change the coil unit itself. Therefore, order coil with DIN plugs and protective cap.

Notes

VHV/STF – 4-way reversing valves

Pilot operated 4-way reversing valves allow an inversion of the refrigeration cycle, changing from cooling mode in summer to heating mode in winter. 4 way valves are also used in defrost cycles in order to allow hot gas to be sent into iced up evaporators. The cycle inversion is initiated by a small solenoid pilot valve, which controls the movement of a slider, and in turn governs the refrigerant flow path. The valve is connected to the discharge and suction of the compressor.

Features



Applications	Advantages	Facts
· Heat pump applications · Reversing chillers · Packaged air conditioning systems · Room air conditioning systems	· Each model can be used with R410A refrigerant as well as R407C, R134a, R404A, R22 · Different tube diameters and configurations available · Designed for instantaneous changeover with minimum pressure differential · Minimized leakage in the valve · Reduced pressure drop due to unique design (shape of internal elements)	· Wide application range for all commonly used refrigerants: (R134a, R404A, R407C, R22 and R410A) · Max. working pressure: 45 bar · Ambient temperature: -20 to 55°C · Full capacity range up to 400 kW · Largest valve available on the market (VHV-6001) · 30 years of experience and know-how

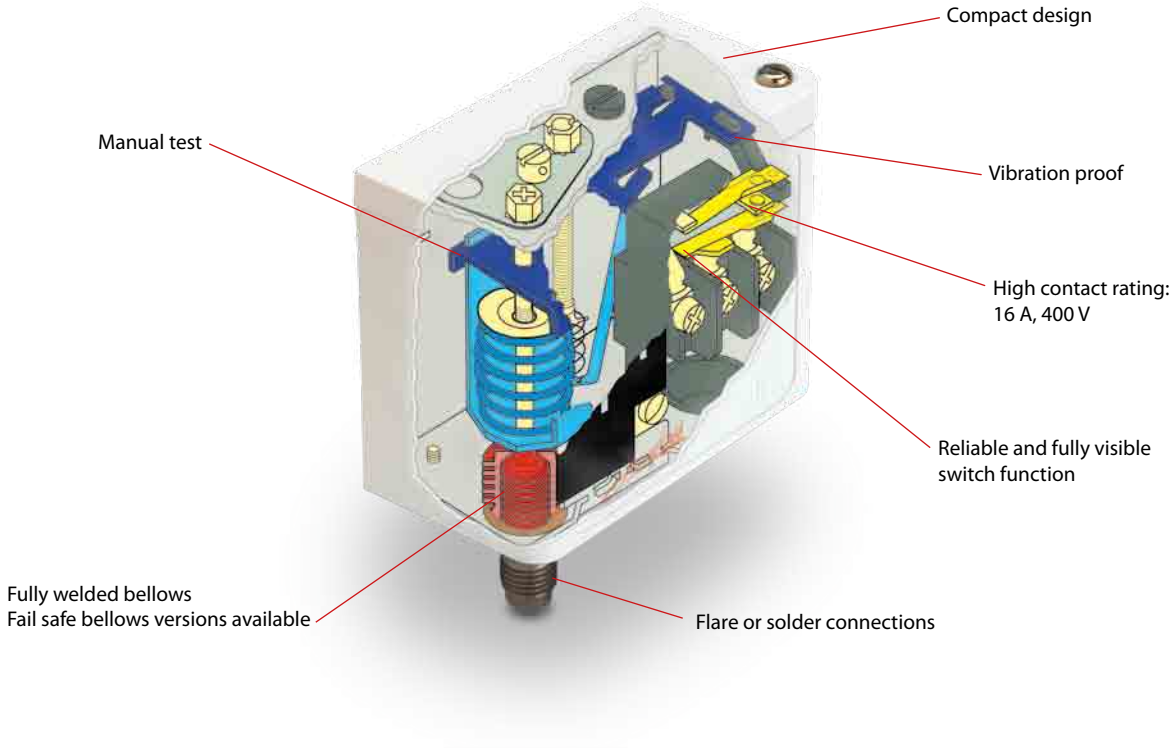
1) The nominal capacities for R407C
2) STF-2501G does not have a bracket
3) Refers to O.D.
4) STF coils can be used with all STF and VHV valves
5) Refers to I.D.
NOTE: R407C and R410A: For discharge and suction, I.D. describes exact inner diameter of valve connections. O.D. relates to the outer diameter of connection pipe in the system.

KP – Pressure controls and temperature controls

KP pressure controls are designed to protect refrigeration systems from excessively high discharge pressures, excessively low suction pressures, to start/stop compressors or to operate fans of aircooled condensers. KP temperature controls with adsorption charge are the optimum choice for frost protection of chillers. The enhanced contact system for 16 A makes it possible to operate electrical motors up to 2 kW directly, without the use of contactors.

Features



Applications	Advantages	Facts
· Traditional refrigeration · Heat pump systems · Air conditioning units · Liquid coolers · Transport refrigeration	· Easy to handle compact design with large and visible scale plates. · Vibration and shock resistant. · Accurate and reliable compressor operation due to excellent electro-mechanical function. · Easy functional check with manual test function of contact system (no tools). · Easy to install electrical connection which also facilitates rack mounting.	· Can be used for all fluorinated refrigerants. The KP-A types can be used for ammonia. · Pressure controls available with flare, solder or capillary tube connections. · Temperature controls available with capillary sensor, air sensor or cylindrical pocket sensor. · IP30 and IP44 enclosures available.

1) Sensor must always be placed colder than the temperature control housing and capillary tube. The temperature control will then regulate independent of ambient temperature.
2) Sensor can be placed warmer or colder than temperature control housing and capillary tube, but variations from +20°C ambient temperature will influence the scale accuracy.
3) With manual switch, not isolating switch.
4) Panel mounting model with top plate.

ACB – Cartridge pressure controls

The ACB series cartridge switches, are small disc type pressure controls manufactured by Danfoss Saginomiya in Poland. The core steps of the manufacturing process of these controls are carried out using precision manufacturing techniques, and within a clean-room environment. This ensures that product specifications can be guaranteed over a longer period, providing reliable performance during the whole product lifetime.

Features

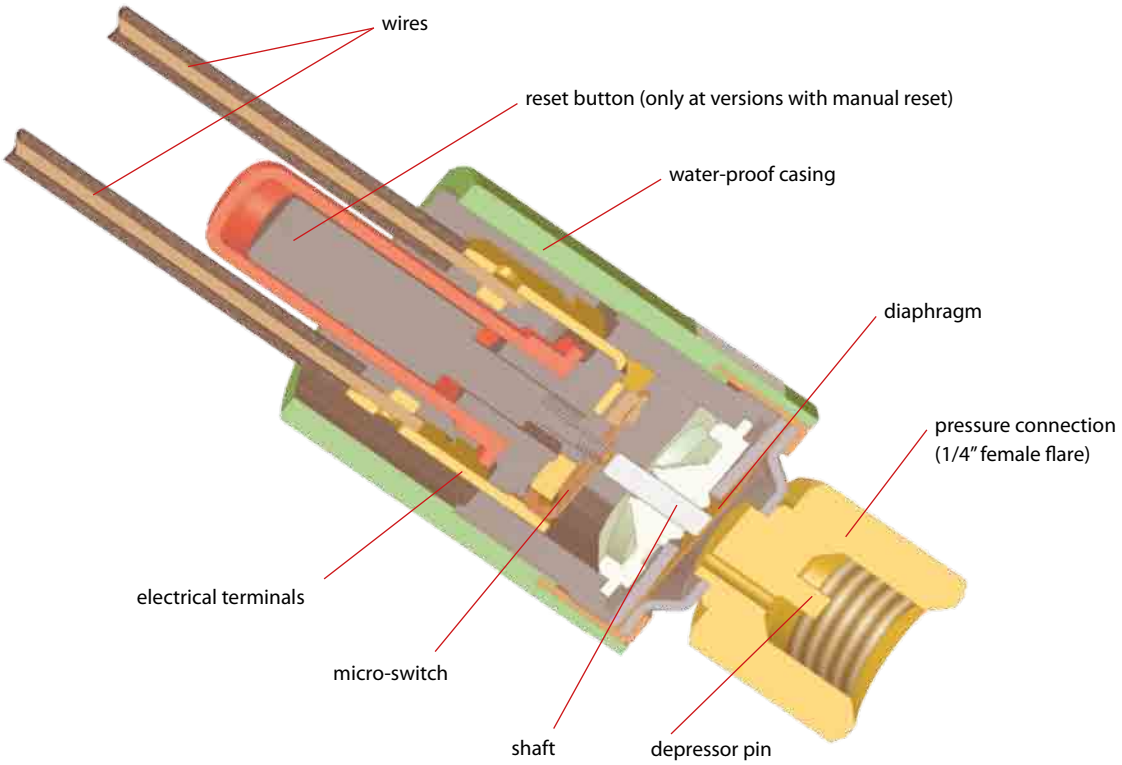

Fig.: type SPST manual reset

Applications	Advantages	Facts
· Traditional refrigeration · Heat pump systems · Air conditioning units · Liquid coolers · Transport refrigeration	· Compact and easy to install · Excellent reliability and repeatability · Wide choice of specifications: set-point, pressure connection, electrical connection · Flexible order quantity due to Euro-pean production with short lead times · Global coverage and widespread use at all major OEMs · Over 100 million pcs installed in the field	· CE, TÜV, VDE, UL and C-UL approvals (SPDT man. only CE appovals) · Contact load up to 6 A (250 V AC) · Normally Closed (NC), Normally Open (NO) or SPDT contact system · Spades or cables (1.5 m cable for standard program) · Pressure range from - 0.50 bar to 45 bar · Automatic or manual reset · IP65 (water proof version with cables) and IP40 (version with spade connec-tors) available

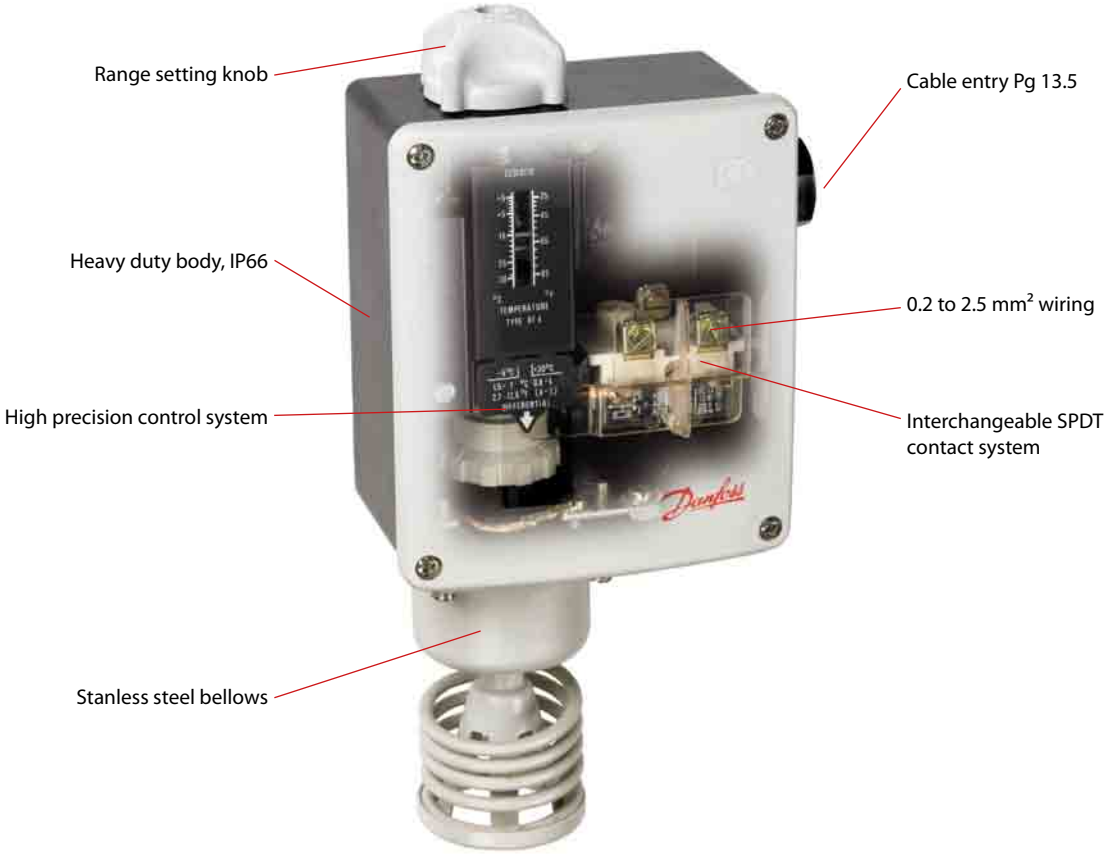
RT – Pressure controls and temperature controls

The RT series includes temperature controls and pressure controls for general applications within industrial and marine refrigeration. An RT temperature controls is fitted with a single-pole changeover switch. The position of the contacts depends on the sensor temperature and the set scale value. An RT pressure control contains a pressure operated single-pole changeover contact, the position of which depends on the pressure in the inlet connection and the set scale value.

Features



Applications	Advantages	Facts
· General applications within industrial and marine refrigeration	· Wide regulating range · Suitable for alternating and direct current · Interchangeable contact system · Special versions with gold plated contact surfaces for PLC applications · Versions for neutral zone regulation · Waterproof versions, enclosure IP66 · High stability and accuracy · Long operating life time	· Enclosure: IP66 to EN 60529 / IEC 60529, except for versions with ext. reset which are to IP54 · Insulation 400 V · Ambient temperature: −50 - 70 °C for housing · Cable connection: Pg 13.5. · Cable diameter: 6 → 14 mm. · Pressure controls for fluorinated refrigerants and R717 (NH_3)

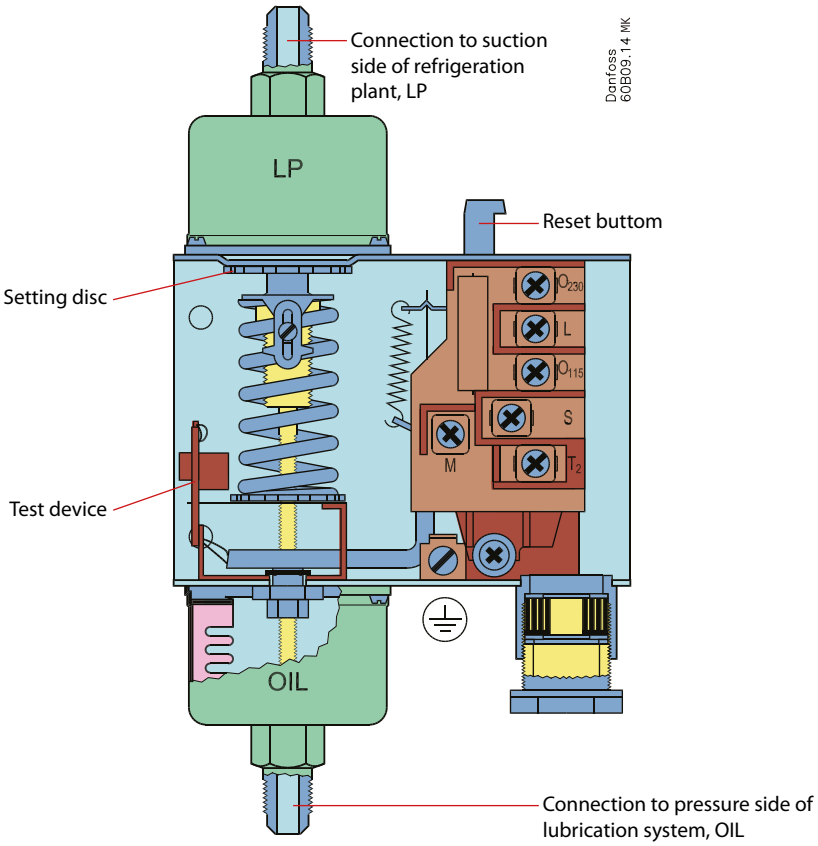
MP – Differential pressure controls

MP 54 and MP 55 oil differential pressure controls are used as safety switches to protect refrigeration compressors against low lubricating oil pressure. If the oil pressure fails the oil differential pressure control stops the compressor after a certain time period. MP 54 and 55 are used in refrigerating systems using fluorinated refrigerants. MP 55A is used in refrigerating systems with R717 (NH_3). MP 55A can also be used in systems with fluorinated refrigerant. MP 54 has a fixed differential pressure setting. It also incorporates a thermal time relay with a fixed release time setting. MP 55 and 55A have adjustable differential pressure and are available both with and without thermal time relay.

Features



Applications	Advantages	Facts
· Deep freeze, refrigeration and air conditioning plant	· Suitable for both alternating and direct current · Small contact differential · Can be used for all normal fluorinated refrigerants	· Meets the requirements of EN 60947 · Wide regulating range · Screwed cable entry for cables from 6 to 14 mm diameter · Electrical connection at the front of the unit · Small contact differential

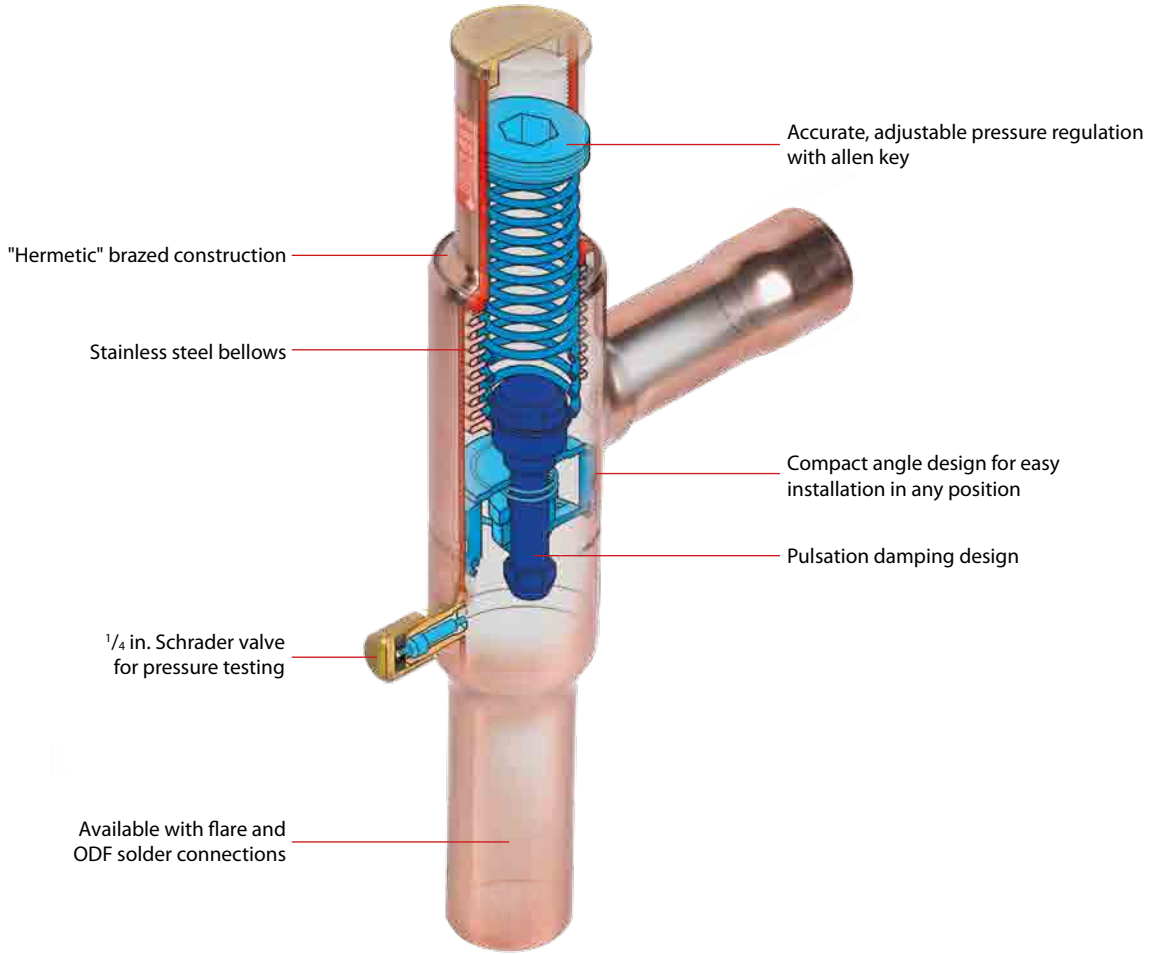
DC13: 0,2 A, 250 V

Type B without time relay:
AC15: 0,1 A, 250 V
DC13: 12 W, 125 V

KVP – Evaporator pressure regulators

The KVP is mounted in the suction line after the evaporator and is maintaining a constant evaporating pressure and thereby a constant surface temperature on the evaporator. The regulation is modulating. By throttling in the suction line, the amount of refrigerant gas is matched to the evaporator load.

Features



Applications	Advantages	Facts
· Traditional refrigeration · Air conditioning units · Transport refrigeration	· The KVP can be used to differentiate the evaporating pressures in two or more evaporators in systems with one compressor. · Protection against a too low evaporating pressure. The regulator closes when the pressure in the evaporator falls below the set value.	· Wide capacity and operating range · Regulation range: 0 to 5.5 bar · For use with HCFC and HFC refrigerants · Maximum working pressure PS = 18 bar

Technical data and ordering

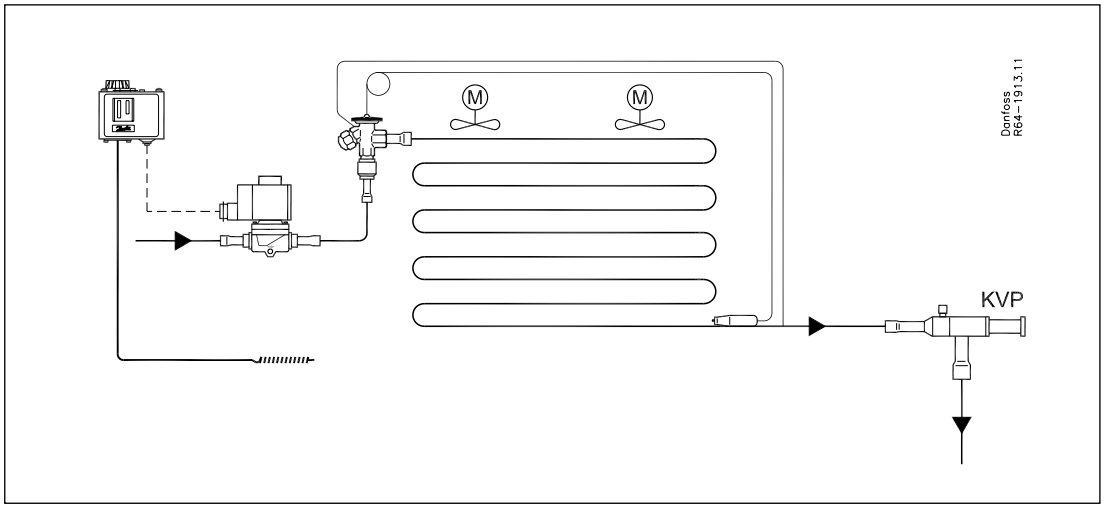
[1] Rated capacity is the capacity of the regulator at
– Evaporating temperature t_e = –10 °C,
– Condensing temperature t_c = +25 °C
– Pressure drop in regulator Δp = 0.2 bar, offset = 0.6 bar

[2] Supplied without flare nuts. Separate flare nuts can be supplied: ½ in./12 mm, code no. **011L1103**, ⅝ in./16 mm, code no. **011L1167**.

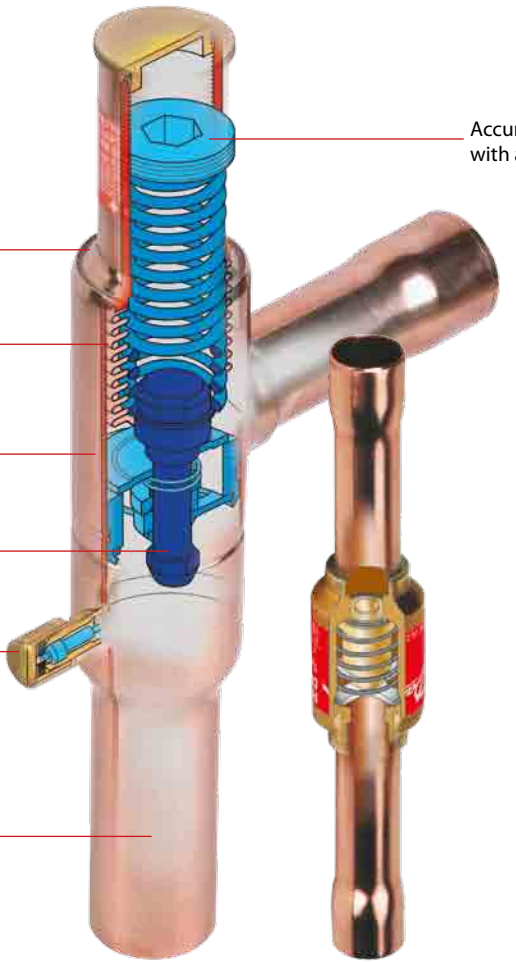
[3] The connection dimensions chosen must not be too small, since gas velocities in excess of 40 m/s at the inlet of the regulator can give flow noise.



KVR/NRD – Condensing pressure regulators

Regulator system KVR and NRD is used to maintain a constant and sufficiently high condenser and receiver pressure in refrigeration and air conditioning plant with air-cooled condensers.
KVR can also be used together with receiver pressure regulator type KVD.

Features



Applications	Advantages	Facts
· Traditional refrigeration · Air conditioning units · Transport refrigeration	· The valves are the most compact on the market. · Excellent performance because of balanced port design (equalization of force on port) · The refrigeration system can operate with very large load variations · Very easy to adjust the KVR · The NRD is non-adjustable – it always follows the actual pressure in the system · Reliable design	· Wide capacity and operating range · Regulation range: 5 to 17.5 bar · For use with HCFC and HFC refrigerants · Maximum working pressure PS = 28 bar

Technical data and ordering

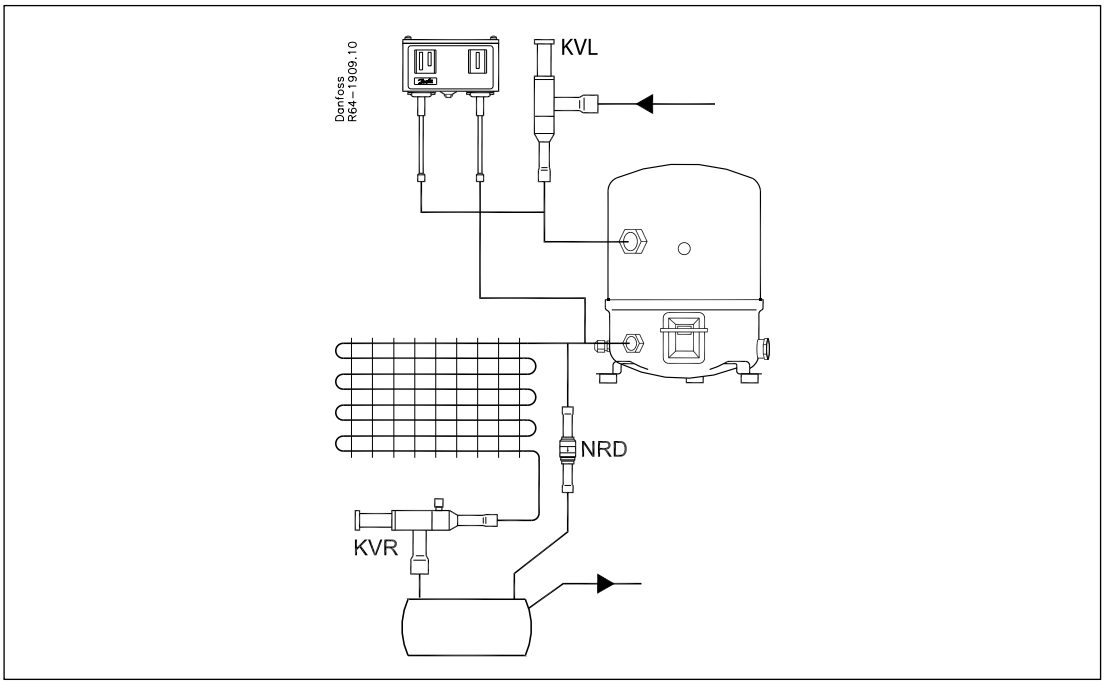
[2)] Supplied without flare nuts. Separate flare nuts can be supplied: ½ in./12 mm, code no. **011L1103**, 5/8 in./16 mm, code no. **011L1167**.

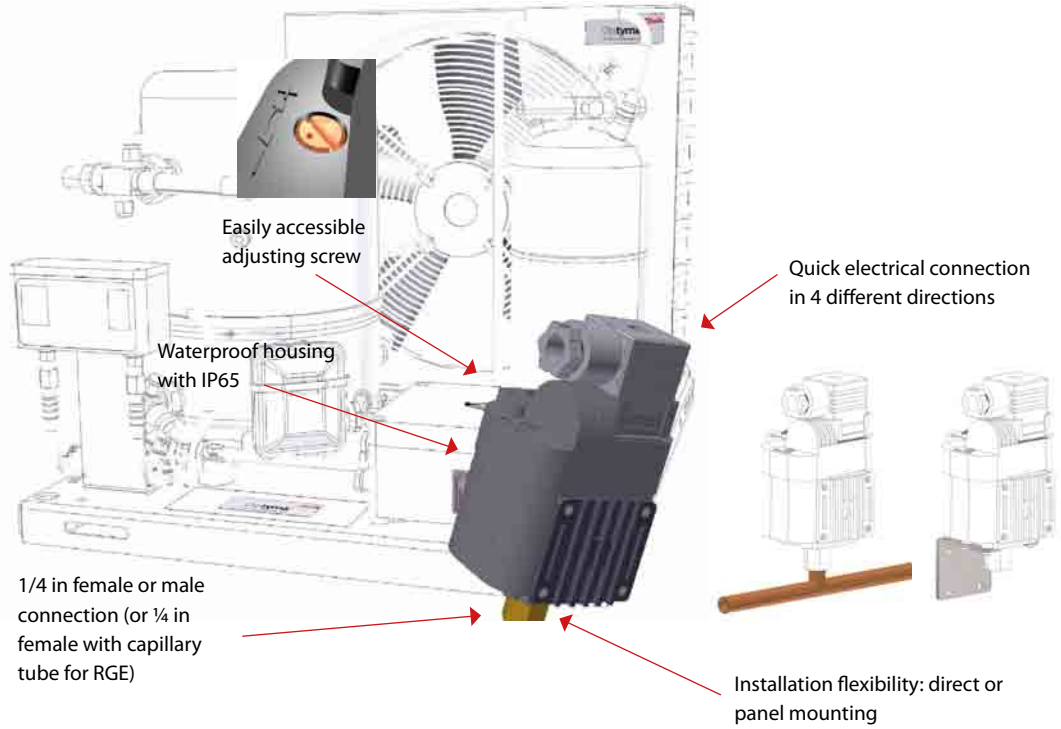
[3)] The connection dimensions chosen must not be too small, since gas velocities in excess of 40 m/s at the inlet of the regulator can give flow noise.



XGE/RGE – Condenser fan speed controls

Fan speed control is becoming increasingly widespread in different refrigeration and air conditioning units, with the benefits of reduced noise and stable condensing pressures under different climatic conditions. The XGE range is very compact and offers the ideal solution for reliable fan control for most units where small fans are used. For medium to large sized fans (single and three phase) the RGE range offers a simple and efficient fan speed control solution.

Features



Applications	Advantages	Facts
· Freezing and refrigeration condensing units · Packaged air conditioners and chillers	· Simple to install and easy setting · "All in one": senses pressure and controls fan speed · Reliable sensing mechanism · XGE: - Compact & light weight (length: 112 mm - diameter: 66 mm - weight: 180 g) - Can be directly mounted onto the refrigeration line or fixed onto a simple bracket (accessory) and screwed to a panel - Easily accessible adjusting screw on the top surface - Easy wiring and electrical connection - Specially designed heat dissipation radiator to prevent overheating	· Electrical rating from 3 to 8A (single phase) and 5 to 7A (3 phase) · For all the commonly used refrigerants, including R410A · Enclosure: IP65 (XGE) and IP54 (RGE) · Full CE / EMC approved · Dual frequency: 50/60 Hz · Max. working pressure: 47 bar · With low speed operation it is possible to select either minimum speed operation or cut-off operation

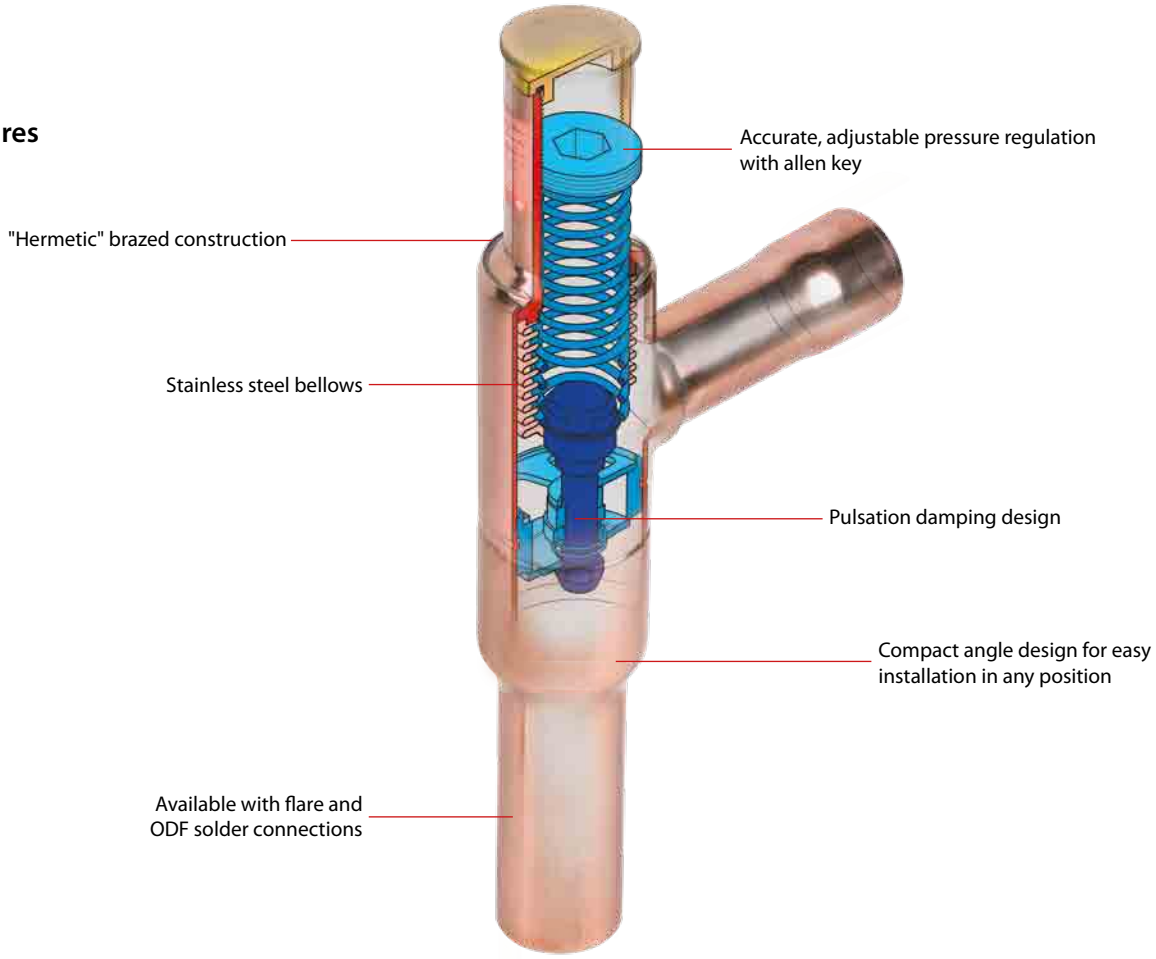
KVL – Crankcase pressure regulators

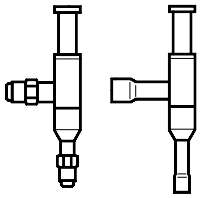
Crankcase pressure regulator type KVL is fitted into the suction line ahead of the compressor. The KVL protects the compressor motor against overload during start-up after long standstill periods or after defrost periods (high pressure in evaporator).

Features



Applications	Advantages	Facts
· Traditional refrigeration · Air conditioning units · Transport refrigeration	· Unaffected by ambient pressure variations · Bellows welded to the body for long lifetime · Accurate, adjustable pressure regulation · Easy adjustment before start up · Protects the compressor against electrical motor overloading	· Wide capacity and operating range · Regulation range: 0.2 to 6 bar · For use with HCFC and HFC refrigerants · Maximum working pressure PS = 18 bar

Technical data and ordering



Crankcase pressure regulator

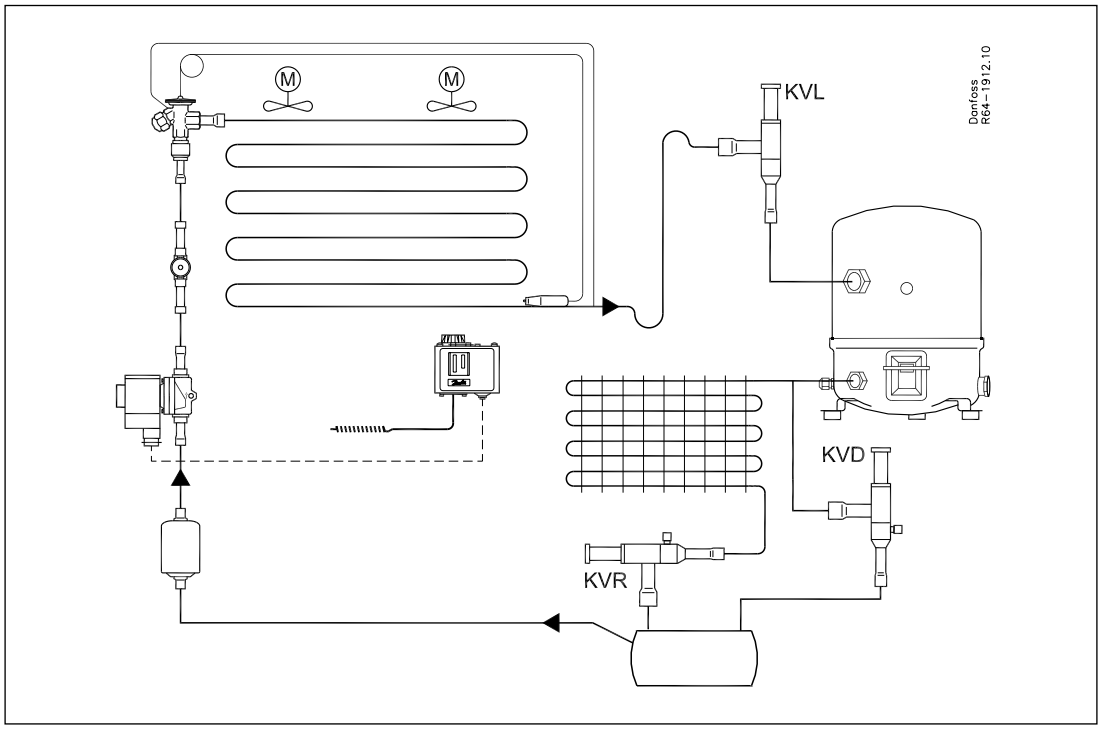
KVL 28	17.8	13.2	15.9	16.4	-	-	-	1⅛	-	034L0046
					-	-	-	-	28	034L0051
KVL 35	17.8	13.2	15.9	16.4	-	-	-	1⅜	35	034L0052

[1] Rated capacity is the capacity of the regulator at
– Evaporating temperature t_e = –10 °C,
– Condensing temperature t_c = +25 °C
– Pressure drop in regulator Δp = 0.2 bar

[2] Supplied without flare nuts. Separate flare nuts can be supplied: ½ in./12 mm, code no. **011L1103**, ⅝ in./16 mm, code no. **011L1167**.

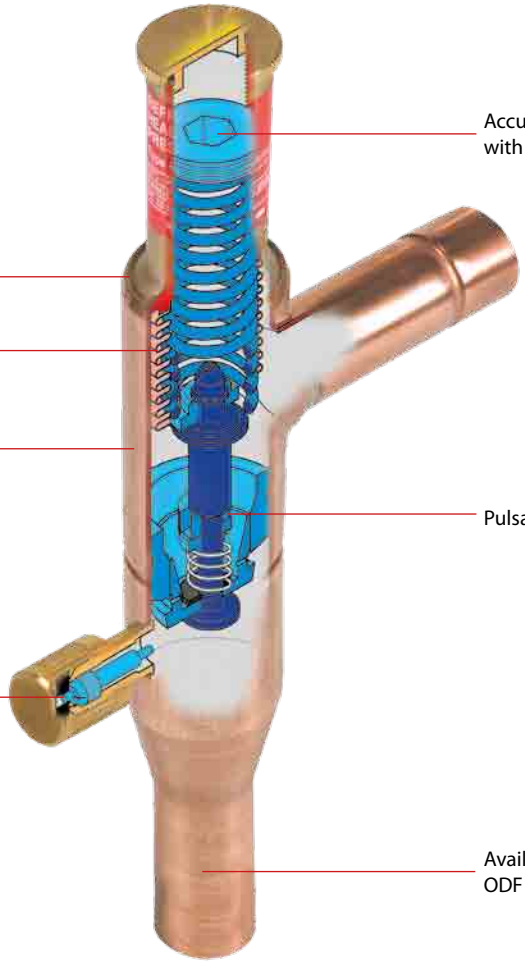
[3] The connection dimensions chosen must not be too small, since gas velocities in excess of 40 m/s at the inlet of the regulator can give flow noise.



KVD – Receiver pressure regulators

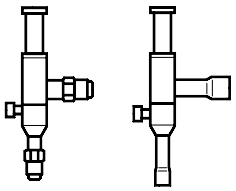
KVD is a modulating pressure regulator. It opens on falling receiver pressure and bypasses hot gas to maintain the receiver pressure at the regulator setting (adjustable).
KVD and KVR form a regulating system, used to maintain constant and adequately high condensing and receiver pressure in plant with heat-recovery, and in refrigeration and air conditioning plant with air-cooled condensers.

Features



Applications	Advantages	Facts
· Traditional refrigeration · Air conditioning units · Commercial refrigeration	· The regulator is equipped with an effective damping device against pulsations which can normally arise in a refrigeration plant. · KVD regulations is only dependent upon the outlet pressure. Pressure variations on the inlet side of the regulator do not affect the degree of opening since KVD is equipped with an equalization bellows.	· Wide capacity and operating range · Regulation range: 3 to 20 bar · Max. working pressure PS = 28 bar · Can be used as a relief valve from high pressure to suction side · For use with HCFC and HFC refrigerants

Technical data and ordering



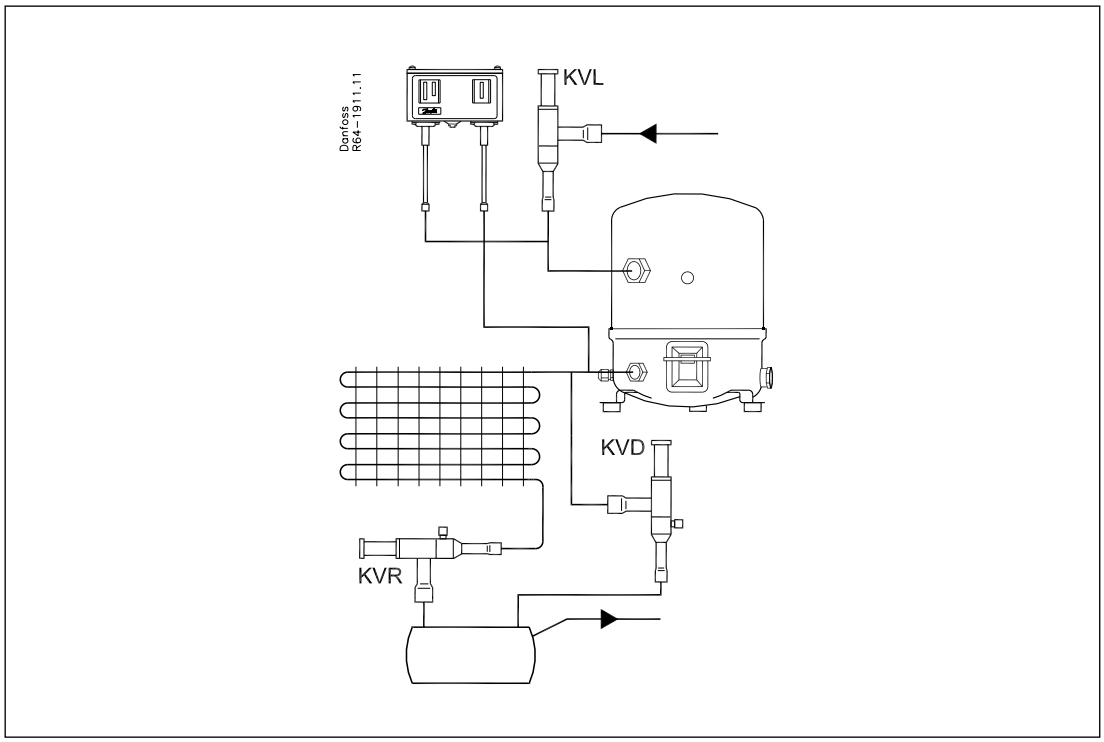
Receiver pressure regulators

Type	k_v value m^3/h [1]	Flare connection [2] [3]		Code no.	Solder, ODF connection [3]		Code no.
		in.	mm		in.	mm	
KVD 12	1.75	½	12	034L0171	½	-	034L0173
	1.75	-	-	-	-	12	034L0176
KVD 15	1.75	⅝	16	034L0172	⅝	16	034L0177

[1] The k_v value is the flow of water in m^3/h at a pressure drop across valve of 1 bar, $\rho = 1000$ kg/m³.

[2] Supplied without flare nuts. Separate flare nuts can be supplied: ½ in./12 mm, code no. **011L1103**, ⅝ in./16 mm, code no. **011L1167**.

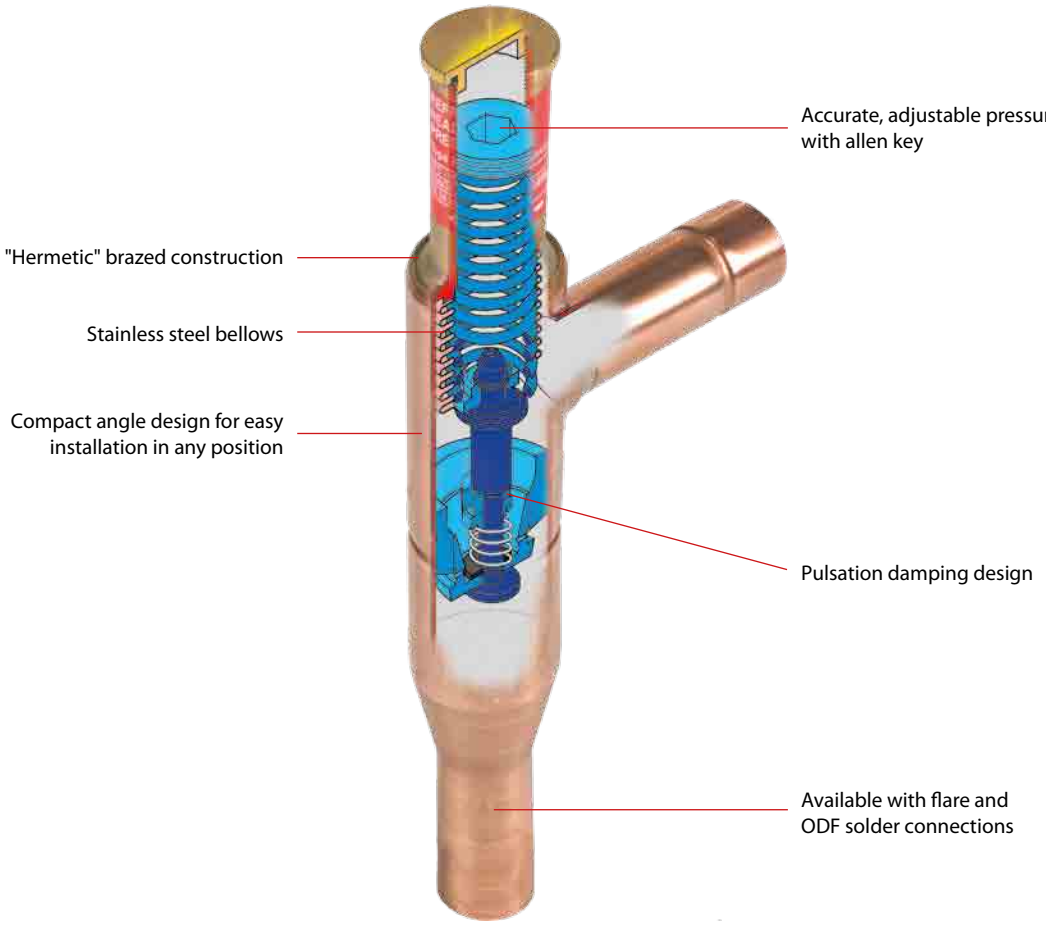
[3] The connection dimensions chosen must not be too small, since gas velocities in excess of 40 m/s at the inlet of the regulator can give flow noise.



KVC – Capacity regulators

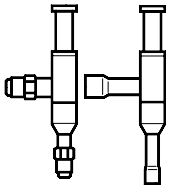
KVC is a capacity regulator used for the adaption of the compressor capacity to the actual evaporator load. Placed in a bypass between high- and low pressure sides of the refrigeration system, KVC imposes a lower limit on the compressor suction pressure by supplying the low pressure side with replacement capacity in the form of hot gas/cool gas from the high pressure side.

Features



Applications	Advantages	Facts
· Traditional refrigeration · Air conditioning units · Transport refrigeration · Commercial refrigeration · Compressed air driers	· KVC regulations is only dependent upon the outlet pressure. Pressure variations on the inlet side of the regulator do not affect the degree of opening since KVC is equipped with an equalization bellows. · The regulator is also equipped with an effective damping device against pulsations which can normally arise in a refrigeration plant. · Compact angle design for easy installation	· Wide capacity and operating range · Regulation range: 0.2 to 6 bar · Maximum working pressure PS = 28 bar · For use with HCFC and HFC refrigerants · Medium temperature: - 45 up to 130 °C

Technical data and ordering



Capacity regulators

Type	Rated capacity in kW [4]				Flare connection [1] [2]		Code no.	Solder connection [2]		Code no.
	R22	R134a	R404A/R507	R407C	in.	mm		in.	mm

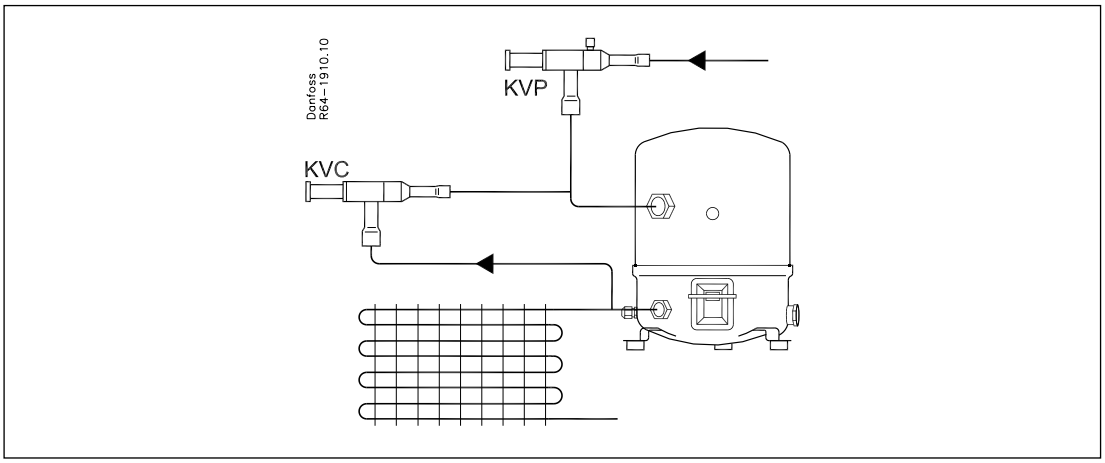
					-	-	-	-	12	034L0146
KVC 15 [3]	14.9	9.4	13.6	16.4	5/8	16	034L0142	5/8	16	034L0147
KVC 22 [3]	19.1	12.0	17.4	21.0	-	-	-	7/8	22	034L0144

[1] Supplied without flare nuts. Separate flare nuts can be supplied: ½ in./12 mm, code no. **011L1103**, 5/8 in./16 mm, code no. **011L1167**.

[2] The connection dimensions chosen must not be too small, since gas velocities in excess of 40 m/s at the inlet of the regulator can give flow noise.

[3] If the discharge temperature becomes too high in relation to the compressor specification, the installation of an injection valve in a bypass between liquid line and compressor suction line is recommended.

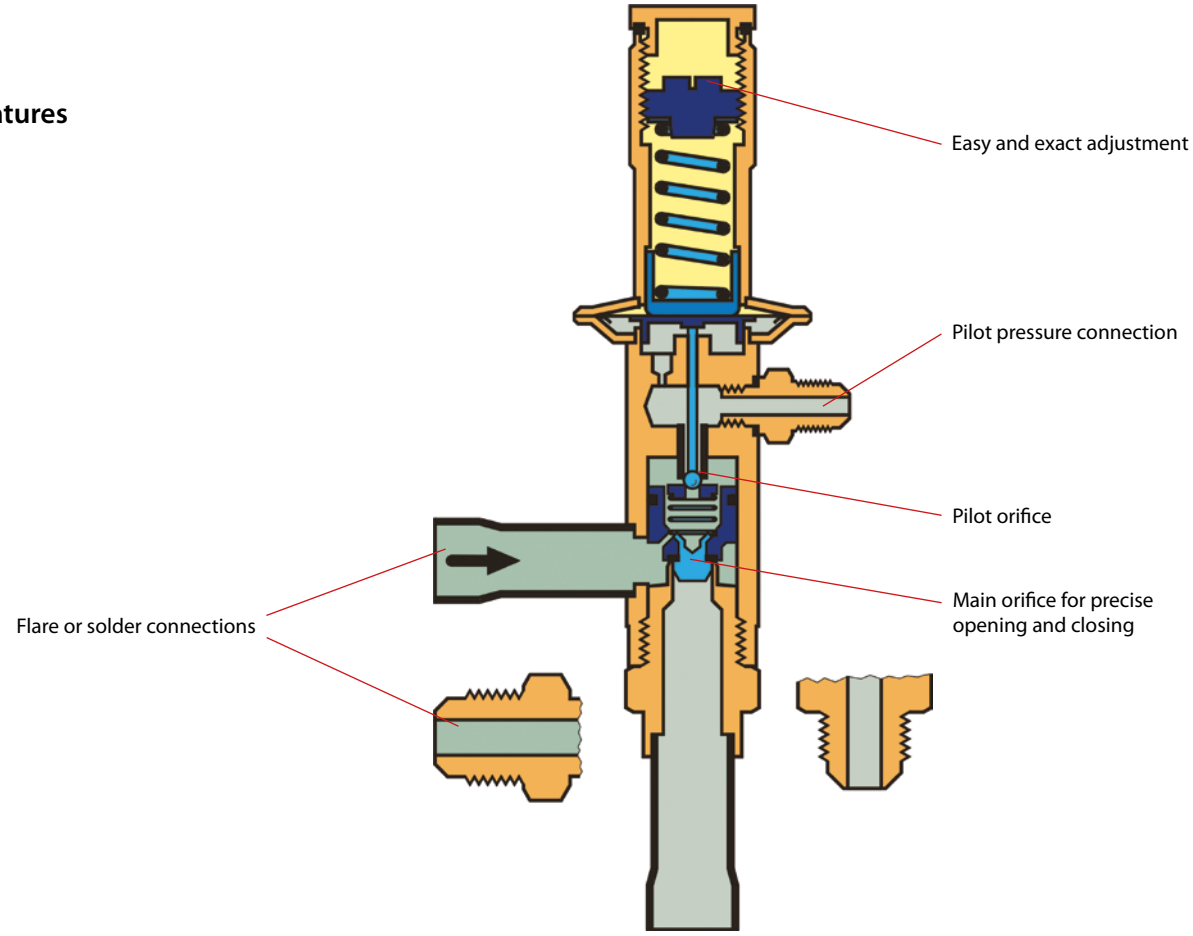
[4] Rated capacity is the capacity of the regulator at:
– Evaporating temperature t_e = –10 °C,
– Condensing temperature t_c = +25 °C



CPCE – Capacity regulator

CPCE capacity regulators adapt compressor capacity to actual evaporator load. They are designed for installation in a bypass line between the low and high pressure sides of the refrigeration system, for hot gas injection between evaporator and thermostatic expansion valve. Injection should be arranged to occur through an LG liquid-gas mixer.

Features



Applications	Advantages	Facts
· Traditional refrigeration · Air conditioning units · Commercial refrigeration · Compressed air dryers · Transport refrigeration	· Avoids high suction superheats by combining hot gas injection with expansion valve characteristics · Can also protect against too low an evaporating temperature, i.e. avoids evaporator icing · LG can be used for hot gas defrosting or reverse cycle systems · Superior control accuracy	· The regulator increases evaporator gas velocity thus ensuring better oil return to compressor · Direct connection to system suction line regulates hot gas injection independent of evaporator pressure drop · LG provides homogenous mixing of the liquid and hot gas refrigerant injected into the evaporator · Can be used for HCFC and HFC refrigerants · Max. working pressure PS = 28 bar

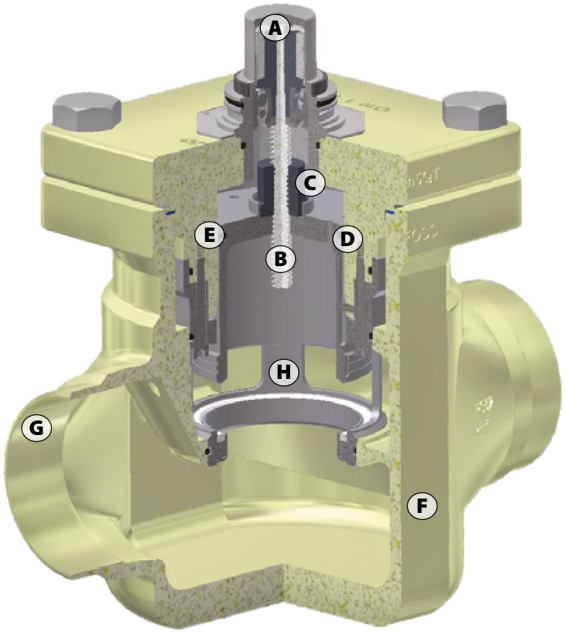
ICM – Flexline™ Motor valves

Danfoss' extensive experience has been used to create a new valve concept which sets new and improved standards with respect to the demands required from control and injection valves.
ICM valves are manufactured with a series of unique features.

Features



ICM

- **A** Hermetic sealed magnet coupling
- **B** Spindle
- **C** PEEK nut
- **D** Teflon piston sealing
- **E** Pressure balanced piston
- **F** Low temperature steel housing, approved for 52 bar
- **G** Direct weld connections
- **H** Optimized regulating cone

The Flexline™ platform is synonymous of flexibility within industrial refrigeration components.

Based on a modular design concept each product features a variety of benefits, including flexible selection, easy installation and maintenance.

The products in the Flexline™ series are: ICV control valves, ICF valve stations and SVL line components.

Advantages and features

- Designed for industrial refrigeration applications for a maximum working pressure of 52 bar/754 psig.
- Modular Concept
  - Each valve body is available with several different connection types and sizes
  - Valve overhaul is performed by replacing the function module
  - Possible to convert ICM motor valve to ICS servo valve.
- Low weight and compact design.
- Low temperature steel body
- Direct coupled connections

  Connection types include butt weld, socket weld, solder and threaded connections.
- V-port regulating cone ensures optimum regulating accuracy particularly at part load.
- Manual opening possible via ICAD or Multifunction tool.
- Cavitation resistant valve seat.
- Magnet coupling - real hermetic sealing.

Facts

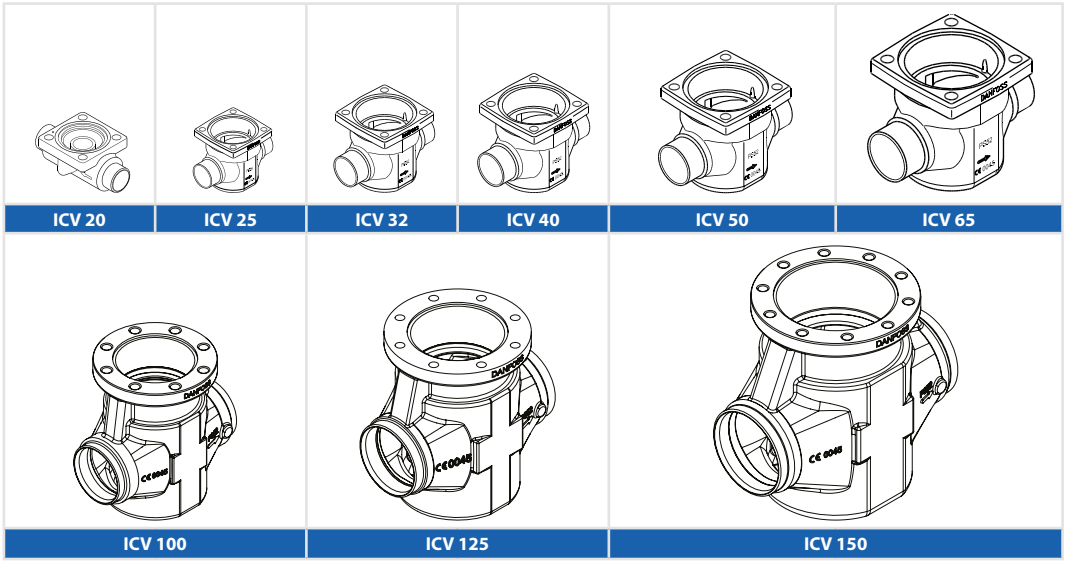
- Refrigerants:
  Applicable to all common refrigerants including R717 and R744 (CO_2) and non- corrosive gases/liquids.
  Use with flammable hydrocarbons cannot be recommended; please contact Danfoss.
- Temperature range
  –60/+120 °C (–76/+248°F).
- Surface protection
  The external surface is zinc-chromated to provide good corrosion protection.
- Pressure range
  The valve is designed for:
  Max. working pressure: 52 bar g (754 psig)
- Max. openening pressure differential (MOPD)
  – ICM 20-32: 52 bar (750 psi)
  – ICM 40: 40 bar (580 psi)
  – ICM 50: 30 bar (435 psi)
  – ICM 65: 20 bar (290 psi)
  – ICM 100: 20 bar (290 psi)
  – ICM 125: 20 bar (290 psi)
  – ICM 150: 20 bar (290 psi)

The ICM concept

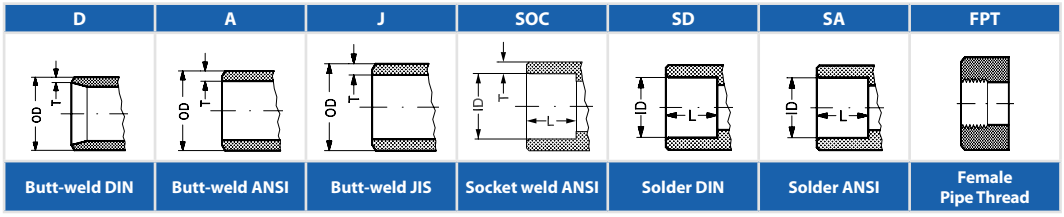
The ICM concept is developed around a modular principle. This gives the possibility of combining function modules and top covers with special valve body size that is available in a variety of connection possibilities.

The valve body

There are nine valve bodies available.

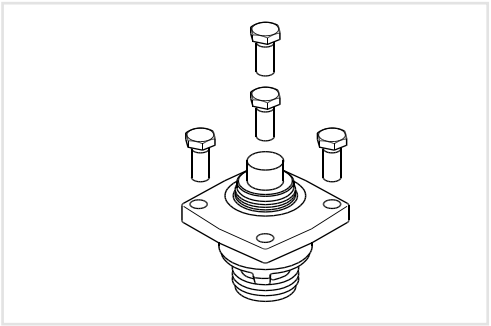


Valve bodies in the sizes ICV 20-ICV 65 are available with a range of undersizes through oversized connection sizes and types. ICV 100-ICV 150 are available in butt-weld DIN and butt-weld ANSI nominal sizes.



The function module / top cover

Each body may be fitted with multiple function module / top cover to give different capacities.



Type	Valve body size	k_v (m^3/h)	C_v (USgal/min)
ICM20A-33	20	0.2	0.23

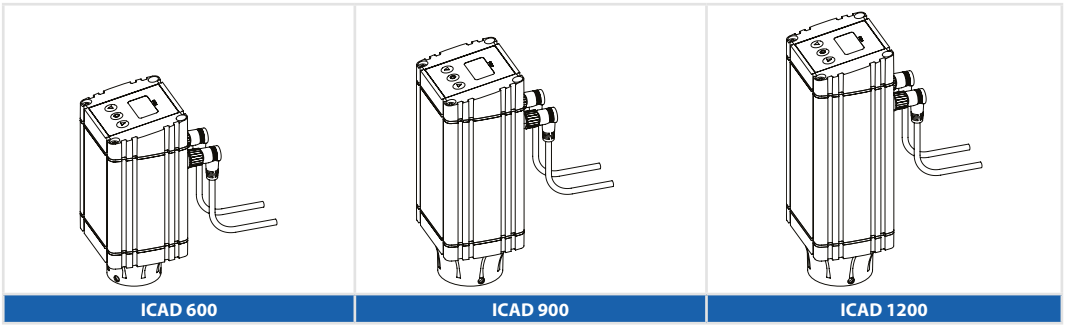
ICM 25-B		12	13.9
ICM 32-A	32	9	10.4
ICM 32-B		17	20
ICM 40-A	40	15	17
ICM 40-B		26	30
ICM 50-A	50	23	27
ICM 50-B		40	46
ICM 65-A	65	35	41
ICM 65-B		70	81
ICM 100-B	100	142	167
ICM 125-B	125	223	260
ICM 150-B	150	370	430

The actuator

A magnetic coupled actuator is easily installed. Three actuators cover the entire ICM program



Ordering the ICM valve

For correct selection of the ICM motor valve please use the Danfoss calculation Software. The software is free of charge.

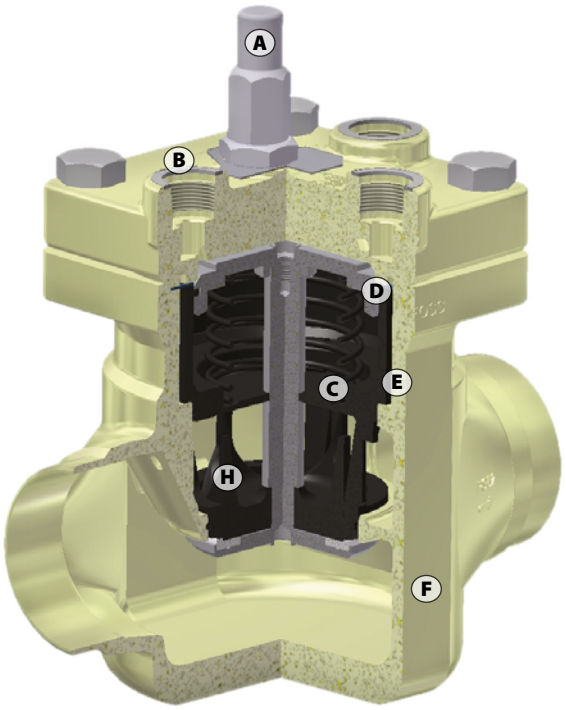
Can be ordered as parts programme (separate ordering of valve body, function / top cover and actuator).

Notes

ICS – Flexline™ Servo valves

Danfoss' extensive experience has been used to create a new valve concept which sets new and improved standards with respect to the demands required from control and injection valves.
ICS valves are manufactured with a series of unique features.

Features



ICS

- (A) Manual opening stem
- (B) Top cover for 1-3 pilots
- (C) Function module
- (D) Steel piston ring
- (E) Surface treated insert
- (F) Low temperature steel housing, approved for 52 bar
- (G) Direct weld connections
- (H) Optimized regulating cone

The Flexline™ platform is synonymous of flexibility within industrial refrigeration components.

Based on a modular design concept each product features a variety of benefits, including flexible selection, easy installation and maintenance.

The products in the Flexline™ series are: ICV control valves, ICF valve stations and SVL line components.

Advantages and features

- Designed for industrial refrigeration applications for a maximum working pressure of 52 bar/754 psig.
- Modular Concept
  - Each valve body is available with several different connection types and sizes
  - Valve overhaul is performed by replacing the function module
  - Possible to convert ICS servo to ICM motor valve
- Low weight and compact design.
- Low temperature steel body
- Direct coupled connections

  Connection types include butt weld, socket weld, solder and threaded connections.
- V-port regulating cone ensures optimum regulating accuracy particularly at part load.
- Manual operating spindle.
- The ICS valve is a multifunction valve where 1 or up to 3 pilot valves can be mounted into the pilot ports.

Facts

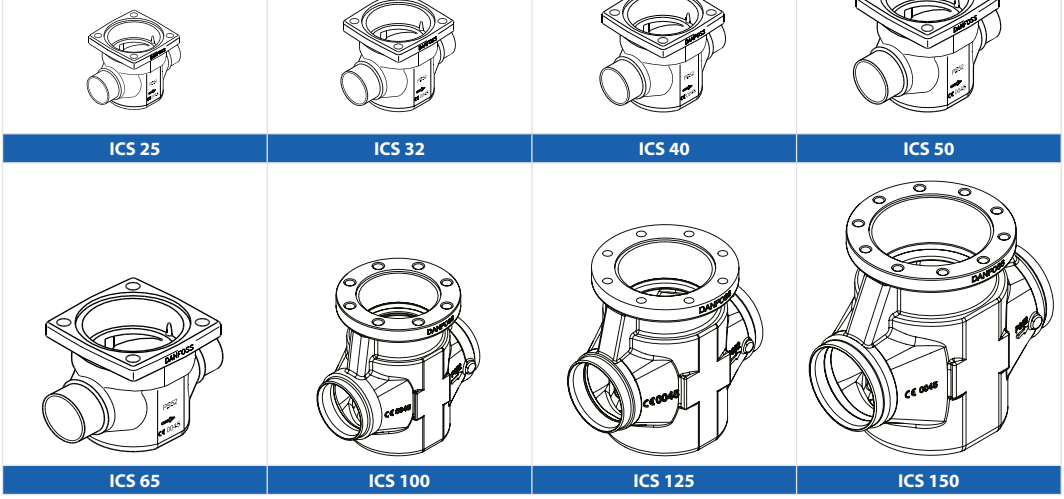
- Refrigerants:
  Applicable to all common refrigerants including R717 and R744 (CO_2) and non- corrosive gases/liquids.
  Use with flammable hydrocarbons cannot be recommended; please contact Danfoss.
- Temperature range
  –60/+120 °C (–76/+248°F).
- Surface protection
  The external surface is zinc-chromated to provide good corrosion protection.
- Pressure range
  The valve is designed for:
  Max. working pressure: 52 bar g (754 psig)

The ICS concept

The ICS concept is developed around a modular principle. This gives the possibility of combining function modules and top covers with valve bodies, which are available in many different sizes and with a variety of connection possibilities.

The valve body

There are eight valve bodies available.



ICS 25	ICS 32	ICS 40	ICS 50
ICS 65	**ICS 100**	**ICS 125**	**ICS 150**

Valve bodies in the sizes ICV 20-ICV 65 are available with a range of undersizes through oversized connection sizes and types.
ICV 100-ICV 150 are available in butt-weld DIN and butt-weld ANSI nominal sizes.

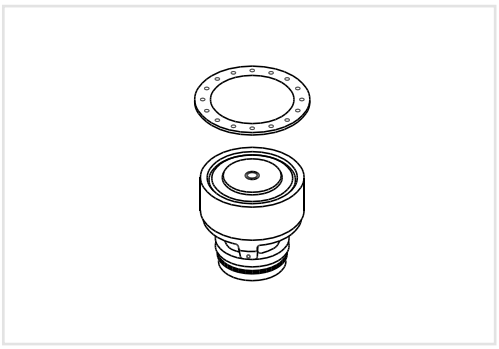
D	A	J	SOC	SD	SA	FPT
						Butt-weld DIN	**Butt-weld ANSI**	**Butt-weld JIS**	**Socket weld ANSI**	**Solder DIN**	**Solder ANSI**	**Female Pipe Thread**

The top cover

Each valve body may be fitted with a 1 pilot or 3 pilot top cover (except ICS 100-150 – only available as 3 pilots version).

The function module

In ICS, multiple inserts (function modules) are available to give different capacities.



Type	Valve body size	k_v (m^3/h)
ICS 25-5	25	1.7
ICS 25-10		3.5
ICS 25-15		6.0
ICS 25-20		8
ICS 25-25		11.5
ICS 32	32	17
ICS 40	40	27
ICS 50	50	44
ICS 65	65	70
ICS 80	80	85
ICS 100	100	142
ICS 125	125	207
ICS 150	150	354

Ordering the ICS valve

For correct selection of the ICS motor valve please use the Danfoss calculation Software. The software is free of charge.

Can be ordered as parts programme (separate ordering of valve body, top cover and function module).

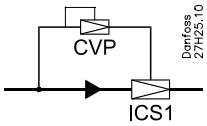
*) Including one blanking plug

ICS application examples

There are several combination possibillieties; here you will see an overview of the most important ICS application possibillities.

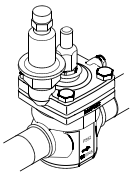
Example no. 1-1

Constant pressure regulation.
–0.66 to 7 bar g
(19.5 in. Hg to 102 psig).



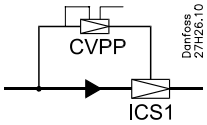
Products

1 × ICS 1 Pilot
1 × CVP (LP)



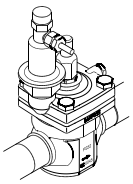
Example no. 1-2

Differential pressure regulation.
0 to 7 bar g (0 to 102 psig).



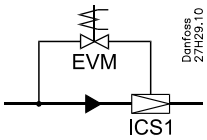
Products

1 × ICS 1 Pilot
1 × CVPP (LP)



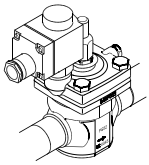
Example no. 1-5

On/off regulation (solenoid valve).



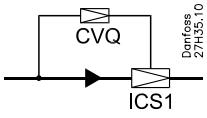
Products

1 × ICS 1 Pilot
1 × EVM
1 × coil



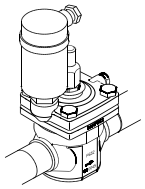
Example no. 1-11

Electronically controlled media temperature regulation.
–1 to 8 bar g
(0 in. Hg to 116 psig).



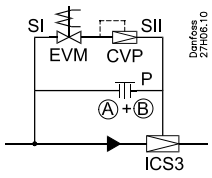
Products

1 × ICS 1 Pilot
1 × CVQ



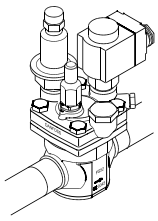
Example no. 3-1

Constant pressure regulation combined with electrical shut off.
–0.66 to 7 bar g
(19.5 in. Hg to 102 psig).

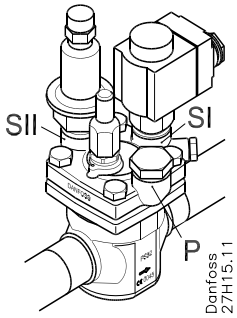


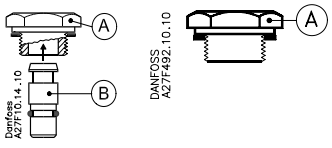
Products

1 × ICS 3 Pilots
1 × blanking plug
1 × CVP (LP)
1 × EVM
1 × coil



The ICS valve will be fully open if the pilot valve in P is fully open, irrespective of the degree of opening of pilot valves SI and SII.
The ICS valve will be fully closed if the pilot valve in P is fully closed and at least one of the valves in SI or SII is fully closed at the same time. The relation between the pilot valves in ports SI, SII and P is shown in the table below.





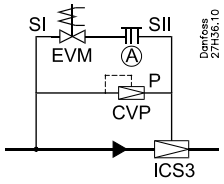
Blanking plug A + B Blanking plug A

Pilot valve port			ICS valve
SI	SII	P	
Open	Open	Closed	Open
Open	Open	Open	Open
Open	Closed	Closed	Closed
Open	Closed	Open	Open
Closed	Open	Closed	Closed
Closed	Open	Open	Open
Closed	Closed	Closed	Closed
Closed	Closed	Open	Open

ICS application examples (continued)

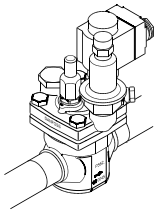
Example no. 3-2

Constant pressure regulation combined with electrical wide open.
–0.66 to 7 bar g
(19.5 in. Hg to 102 psig).



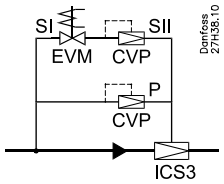
Products

1 × ICS 3 Pilots
1 × blanking plug
1 × CVP (LP)
1 × EVM



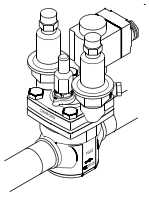
Example no. 3-4

Constant pressure regulation with change-over between two preset evaporating pressures.
–0.66 to 7 bar g
(19.5 in. Hg to 102 psig).



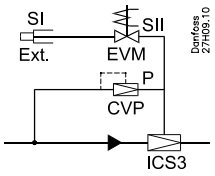
Products

1 × ICS 3 Pilots
2 × CVP (LP)
1 × EVM
1 × coil



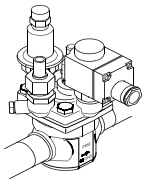
Example no. 3-5

External control pressure with electrical shut off combined with constant pressure regulation.
–0.66 to 7 bar g
(19.5 in. Hg to 102 psig).



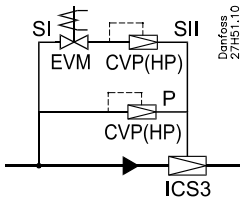
Products

1 × ICS 3 Pilots
1 × nipple for external control pressure
1 × CVP (LP)
1 × EVM
1 × coil



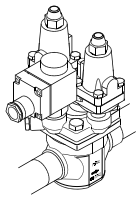
Example no. 3-18

Constant pressure regulation with change-over between two preset evaporating pressures.
–0.66 to 28 bar g
(19.5 in. Hg to 406 psig).



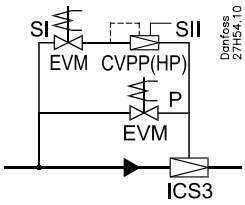
Products

1 × ICS 3 Pilots
2 × CVP (HP)
1 × EVM
1 × coil



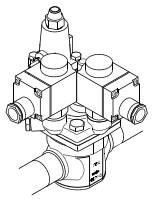
Example no. 3-21

Differential pressure regulation combined with electrical wide open and shut off.
0 to 22 bar g
(0 to 319 psig).



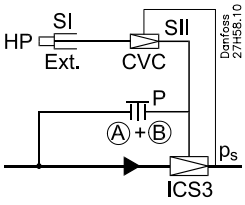
Products

1 × ICS 3 Pilots
1 × CVPP (HP)
2 × EVM
2 × coils



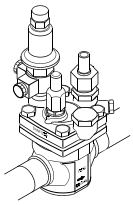
Example no. 3-25

Crankcase pressure regulation (max. suction pressure regulation) at low pressure drops across the valve.
–0.45 to 7 bar g
(13.3 in. Hg to 102 psig).



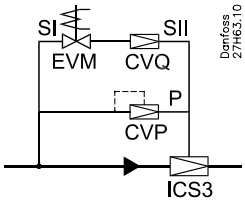
Products

1 × ICS 3 Pilots
1 × blanking plug
1 × nipple for external control pressure
1 × CVC



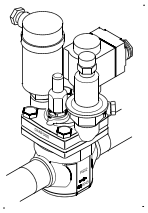
Example no. 3-31

Electronically controlled media temperature regulation combined with electrical shut off and changeover to constant pressure regulation.
–1 to 8 bar g
(0 in. Hg to 116 psig).



Products

1 × ICS 3 Pilots
1 × CVQ
1 × CVP (LP)
1 × EVM
1 × coil



Notes

Pilot valves for servo operated main valves

Each pilot valve is designed to give the optimum control accuracy within the specific function range of the valve.
Several pilot valves can be mounted in series and/or in parallel on a ICS or PM main valve to give a very large number of functions.
Mounted in a CVH housing, the pilot valves can be used in external lines, either as independently operating valves or as external control valves for the main valve.

Advantages and features

The range of pilot valves consists of:

- Constant-pressure pilot valve, type CVP (LP) and CVP (HP)
- Differential-pressure pilot valve, type CVPP (LP) and CVPP (HP)
- High pressure pilot valve, type CVP (XP) ideal for CO_2 hot gas defrosting
- Pressure-operated pilot valve with reference pressure connection, type CVC
- Electronically operated constant-pressure pilot valve, type CVQ (pressure-dependent)
- Solenoid pilot valve, type EVM (NC)
- Solenoid pilot valve, type EVM (NO)
- Housing, type CVH for pilot valves, for mounting in external pilot lines

- Applicable to all common non flammable refrigerants including R 717 and non corrosive gases/liquids dependent on sealing material compatability.
- The pilot valves can be screwed direct into the main valve, thus avoiding the necessity of welding, soldering and separate pilot lines.
- The pilot valves can be mounted direct in a ICS or PM main valve or be connected via an external pilot line and a CVH housing.
- All pilot valves can be used on all sizes of main valves.
- Extremely accurate pressure and temperature control.
- Several pilot valves can be connected in series or in parallel to provide many functions in the same ICS or PM main valve.

Technical data and code numbers

Technical data

	Valve type	MWP	k_v-value	Temperature range	Pressure range	Code no.
Low-pressure version						
	CVP (LP)	17 bar g	0.40 m³/h	–50 to 120°C	0 bar g to 7 bar g	027B1100

	EVM (NO)	52 bar g	0.12 m³/h		MCPD: 19 bar g	027B1131

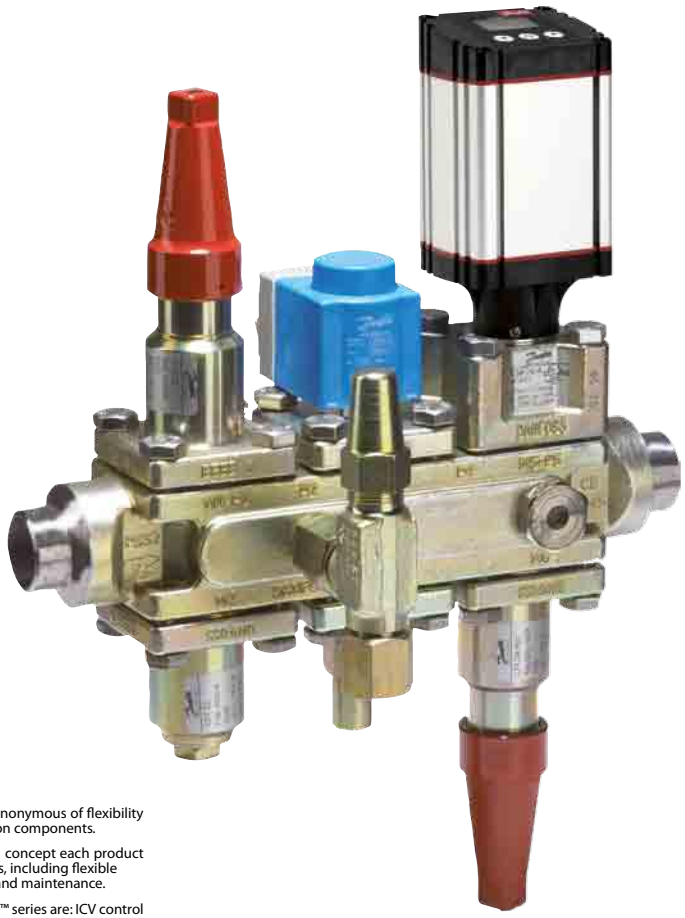
CVQ electrical data

	CVQ	17 bar g	0.45 m³/h		–1 bar g to 5 bar g	027B1139
	CVQ	17 bar g	0.45 m³/h		0 bar g to 6 bar g	027B1140
	CVQ	17 bar g	0.45 m³/h		1.7 bar g to 8 bar g	027B1141

Supply voltage	24V a.c. ±10%
Frequency	50 to 60 Hz
Power consumption, operation start	50 VA 75 VA
Enclosure	NEMA 3 / IP55
Cable entry	Pg 13.5
Ambient temperature, operation transport	–30 to 50°C (–22 to 122°F) –50 to 70°C (–58 to 158°F)
CE -marking	EMC-Directive 89/336/EEC, EMC-Directiv 89/336/ EN 50081-1 and EN 50082-1

ICF – Flexline™ Valve stations

The ICF valve station is an innovative solution that provides the full functionality of a conventional valve station in a single compact unit. This solution not only provides a number of advantages in the design phase of a refrigeration plant but also in the installation, service and maintenance.



The Flexline™ platform is synonymous of flexibility within industrial refrigeration components.

Based on a modular design concept each product features a variety of benefits, including flexible selection, easy installation and maintenance.

The products in the Flexline™ series are: ICV control valves, ICF valve stations and SVL line components.

Advantages and features

- Applicable to all common non-flammable refrigerants including R744 and R717.
- The main components of the ICF solution are:
  - A housing
  - A maximum of four or six function modules
- Designed for low and high pressure refrigerants and can be used in liquid lines, compressor injection and hotgas lines
- The ICF concept is designed to fulfil global refrigeration requirements. For specific approval information, please contact Danfoss
- One code number equals one application solution
- Modular concept: Each housing is available with several different connection types and sizes
- The ICF is leak tested at high pressure and its functions are tested under factory controlled conditions
- The ICF valve is a compact valve train ready for the jobsite. No need to disassembly prior to installation under normal welding procedures
- Down time during service is reduced to a fraction compared to conventional valve trains. The unique design of the ICF ensures a quick pump down and faster access to valve modules.
- Valve service is performed by replacing the function module
- Standard side ports to fit service valves, pressure transmitters, sight glasses
- Direct Weld Connections (no leaks through flanges)
- Available with different connection types including ANSI and DIN, Socket weld
- Low temperature steel housing
- High capacities low pressure drop
- Compact design
- Low weight design

Technical data and application examples

Technical data

Refrigerants	Applicable to all common non-flammable refrigerants including R717, R744 (CO_2) and non-corrosive gases/ liquids dependent on sealing material compatibility.
Temperature range	–60/+120°C (–76/+248°F).
Presssure range	The ICF is designed for max. working pressure: 52 bar g (754 psig)
Modules	4 or 6
Connections	Butt weld, DIN (EN 10220): 20D (3/4") to 40D (1½") Butt weld, ANSI (B 36.10) : 20A (3/4") to 40A (1½") Socket weld, ANSI (B 16.11): 20SOC (3/4") to 40SOC (1½")
Housing ICF 20	**Small frame**  ICF 20-4  ICF 20-6
Housing ICF 25-40	**Large frame**  ICF (25-40)-4  ICF (25-40)-6
Side ports	Number of side port are depending on on model and connection type

Accessories

- Stop valve (for sideport)
- Blind plug
- Connectors
- Sight glass
- Weld connector
- ICAD and ICAD accessories
- Coils

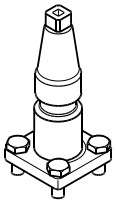
Description of the function modules for ICF 20

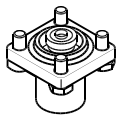
ICFS 20
Stop valve module
This module has the function of a stop valve, and has a red cap.

ICFR 20A
Manual regulating valve module
This module has the function of a hand regulating valve, and has a yellow cap.



ICFS 20 / ICFR 20A

ICFC 20
Check valve module
This module has the function of a check valve.

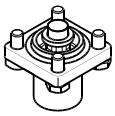


ICFC 20

ICFF 20 / ICFF 20E
Filter module
This module functions as a filter.

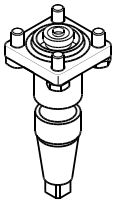
Filter size (ICFF 20):
ICF with DIN and ANSI connections: Pleated 150µ (100 mesh) /45 cm² (7.0 in²)

ICF with SOC connections (ICFF 20E):
Pleated 250µ (72 mesh) / 160 cm² (24.8 in²)



ICFF 20 / ICFF 20E

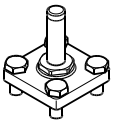
ICFN 20
Stop/check valve module
This module has the function of a combined stop and check valve, and has a red cap.



ICFN 20

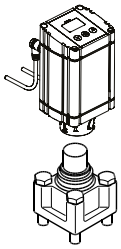
ICFE 20
Solenoid valve module
This module has the function of a normally closed solenoid valve for controlling the refrigerant flow.

ICFA 20
Electronic expansion valve module
This module has the function of an electronic pulse width modulating (PWM) expansion valve.



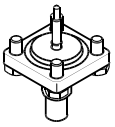
ICFE 20 / ICFA 20

ICM 20-A, B or C
Motor valve module
This module is a stepper motor actuator valve for on/off and modulating control of the refrigerant flow.



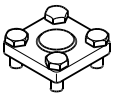
ICM 20-A, B or C

ICFO 20
Manual opening module
This module facilitates the manual opening of the solenoid valve (type ICFE).



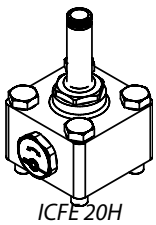
ICFO 20

ICFB 20
Blank top cover
This provides a blanking cover for unused module ports.



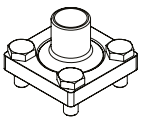
ICFB 20

ICFE 20H
Solenoid valve module with integrated manual opener
This module has the function of a normally closed solenoid valve for controlling the refrigerant flow.



ICFE 20H

ICFW 20
Welding module 20 DIN or ¾" SOC
This module is used for drain connection during hot-gas defrosting - in case of high capacity.

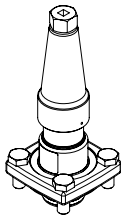


ICFW 20

Please note:
At about 10% of maximum mass flow of
ICFE 20H, the pressure differential correspond to about 0.07 Bar (1 psi). ICFE 20H will start to open at these conditions.
At a pressure differential of minimum 0.2 Bar (2.9 psi) ICFE 20H will be 100 % open.

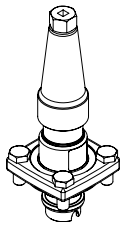
Description of the function modules for ICF 25-40

ICFS 25-40
Stop valve module
This module has the function of a stop valve, and has a red cap.



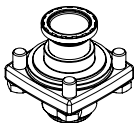
ICFS 25-40

ICFR 25-40, A or B
Manual regulating valve module
This module has the function of a hand regulating valve, and has a yellow cap.



ICFR 25-40

ICFC 25-40
Check valve module
This module has the function of a check valve.

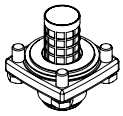


ICFC 25-40

ICFF 25-40 / ICFF (25-40)E
Filter module
This module functions as a filter.

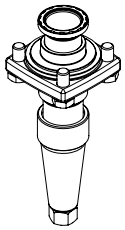
Filter size:
ICF with DIN and ANSI (ICFF 25-40) connections: Pleated 150µ (100 mesh) / 160 cm^2 (24.8 in^2)

ICF with SOC connections (ICF (25-40)E):
Pleated 250µ (72 mesh) / 330 cm^2 (51.2 in^2)



ICFF 25-40 / ICFF (25-40)E

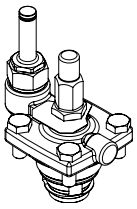
ICFN 25-40
Stop/check valve module
This module has the function of a combined stop and check valve, and has a red cap.



ICFN 25-40

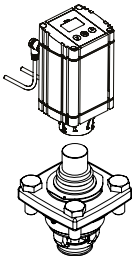
ICFE 25-40
Solenoid valve module
This module has the function of a normally closed solenoid valve for controlling the refrigerant flow.

It has a built-in manual opening function.



ICFE 25-40

ICM 25-A or B
Motor valve module
This module is a stepper motor actuator valve for on/off and modulating control of the refrigerant flow.

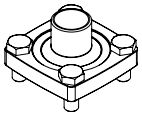


ICM 25-A or B

Please note:
At about 10% of maximum mass flow of ICFE 25-40, the pressure differential correspond to about 0.07 Bar (1 psi). ICFE 25-40 will start to open at these conditions.

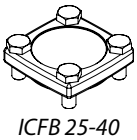
At a pressure differential of minimum 0.2 Bar (2.9 psi) ICFE 25-40 will be 100 % open.

ICFW 25-40
Welding module, 25 DIN or 25 (1") SOC
This module is used for drain connection during hot-gas defrosting - in case of high capacity.



ICFW 25-40

ICFB 25-40
Blank top cover
This provides a blanking cover for unused module ports.

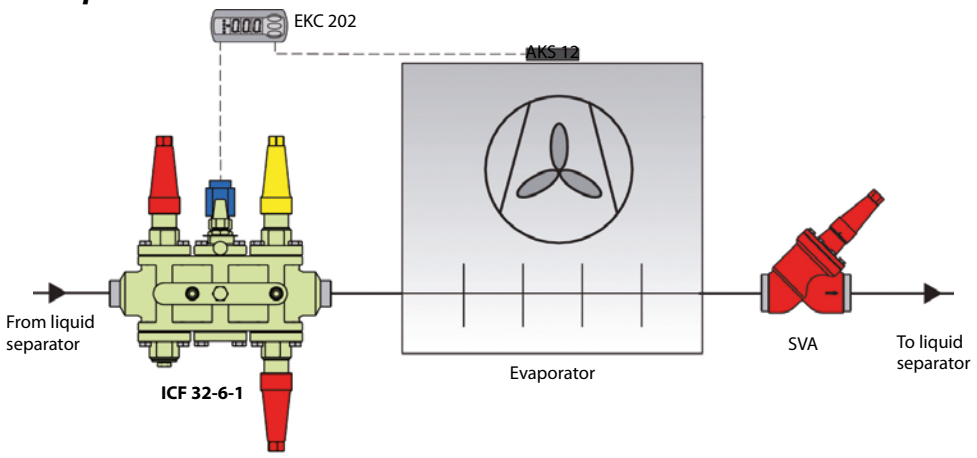


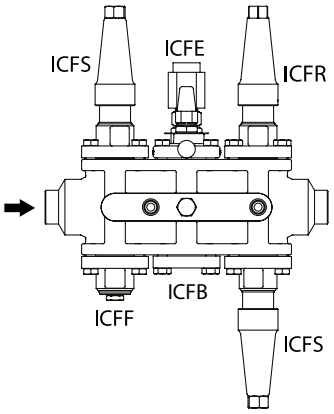
ICFB 25-40

Application example A

A valve combination for a flooded evaporator operating on/off from a thermostat and with electric defrost is required. Manual override of the solenoid valve is requested. Common ICF configurations for this kind of application:
ICF20-6-1, ICF25-6-1A, ICF32-6-1B, ICF40-6-1B, ICF20-4-10/H, ICF25-4-10, ICF32-4-10, ICF40-4-10.
Depending on capacity and size **ICF 32-6-1A with 32mm butt weld DIN connection**, code number **027L4006** could be used.

Example A





ICF32-6-1A
027L4006

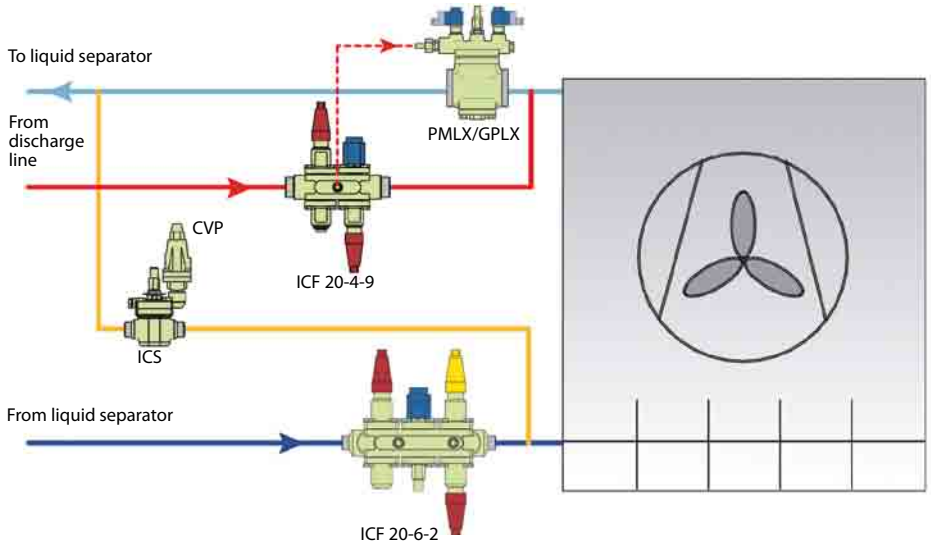
Not all valves are shown. Not to be used for construction purposes.

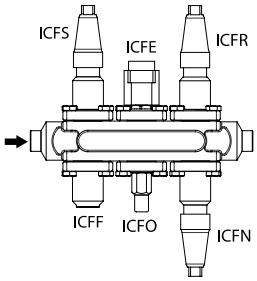
Application example B

Evaporator with soft opening gas powered valve PMLX in the suction line and hot gas defrost featuring: **ICF pumped liquid** and ICF Hot gas valve stations. ICS+CVP as a defrost regulator (OFV optional depending on capacity).
ICF pumped liquid configurations vary according to capacity and size: ICF20-6-2, ICF20-6-3H, ICF25-6-3A, ICF32-6-3B, ICF40-6-3B.
Depending on capacity and size **ICF 20-6-2 with 25mm butt weld DIN connections**, code number **027L3011** could be used.

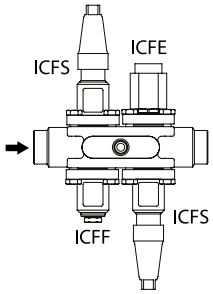
On the same evaporator ICF Hot gas Valve station with side port to power PMLX/GPLX. Depending on capacity: ICF20-4-9, ICF20-4-9H, ICF25-4-9, ICF32-4-9, ICF40-4-9.
Depending on capacity and size **ICF 20-4-9 with 32 mm DIN butt weld connections**, code number **027L3068** could be used.

Example B





ICF 20-6-2
027L3011



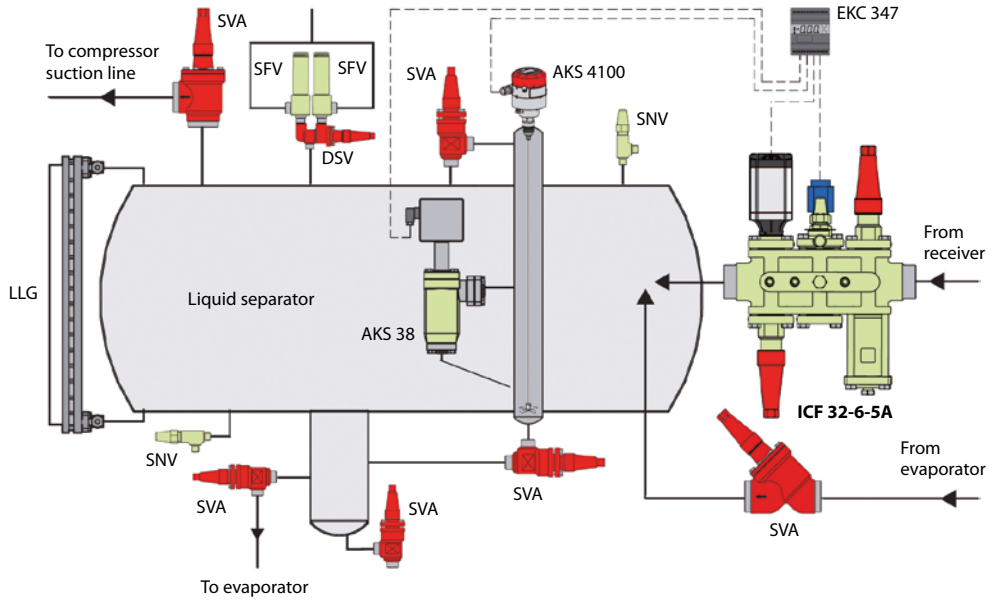
ICF 20-4-9
027L3068

Not all valves are shown. Not to be used for construction purposes.

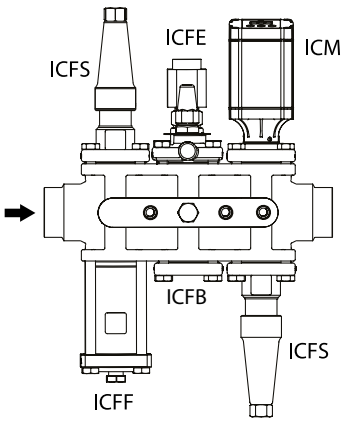
Application example C

A valve combination for liquid injection to separator with electronic injection valve is required. It is requested to have a solenoid valve in front of the control valve.
Depending on capacity and size **ICF 32-6-5A with 32 mm socket weld connections**, code number **027L4044** could be used.

Example C



Not all valves are shown. Not to be used for construction purposes.

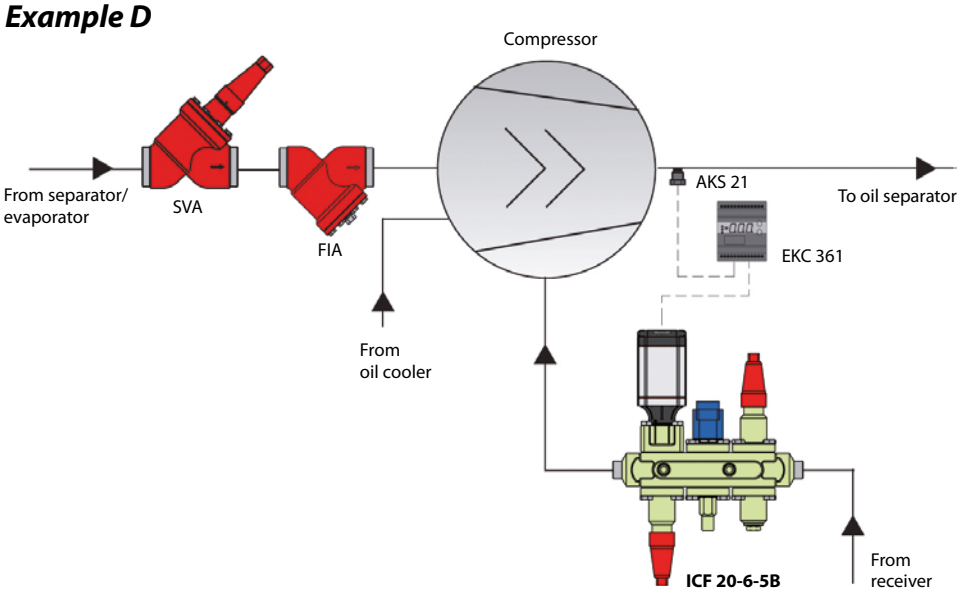


ICF 32-6-5A
027L4044

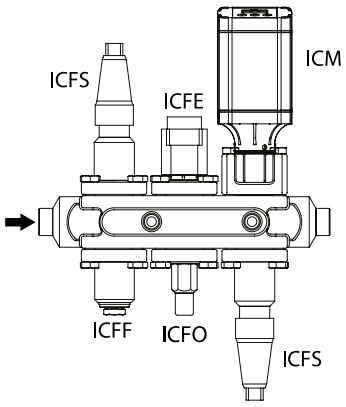
Application example D

A valve combination for compressor liquid injection with electronic injection valve is required. It is a required to have a solenoid valve in front of the control valve.
For this application **ICF 20-6-5** is recommended. Verify cone size (A33;A;B66;B) of motorized valve based on compressor side port inlet pressure, oil rejection capacity and liquid inlet pressure. Depending on capacity and size **ICF 20-6-5B with 25 DIN butt well connection**, code number **027L3042** could be used.

Example D



Not all valves are shown. Not to be used for construction purposes.

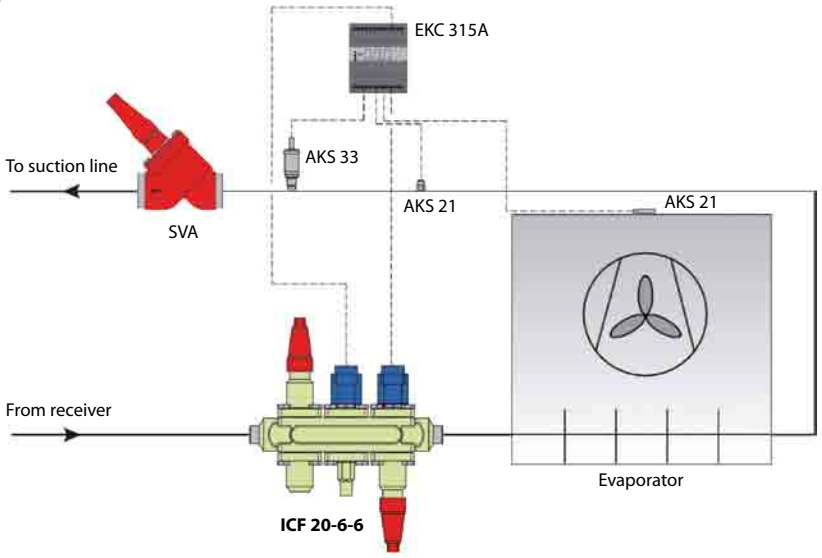


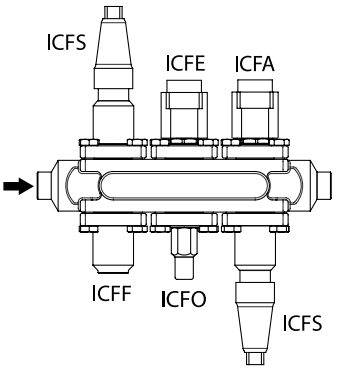
ICF 20-6-5B
027L3042

Application example E

A valve combination for an electronically controlled DX evaporator without hotgas defrost is required.
Depending on capacity and size **ICF 20-6-6 with 20mm DIN butt weld connections**, code number **027L3053** could be used.

Example E





ICF 20-6-6
027L3053

Not all valves are shown. Not to be used for construction purposes.

Notes

AKS 4100/4100U – Liquid level sensors

The AKS 4100/4100U liquid level sensor is designed specifically to measure liquid levels in a wide range of refrigeration applications.
The liquid level sensor is based on a proven techhology called Time Domain Reflectometry (TDR) or Guided Micro Wave.
AKS 4100/4100U liquid level sensor can be used to measure the liquid level of many different refrigerants in vessels, accumulators, receivers, standpipes, etc.

Advantages and features

- Approved and qualified by Danfoss for refrigeration applications
- One product covering several probe lengths (cable version)
- A single product for all commonly used refrigerants (cable version)
- Cable version requires less top-end clearance for installation and service
- Proven operation with all refrigerants in combination with oil
- No need to clean cable version when fully covered by oil
- The cable version is very compact and easy to handle, ship, install and use with different lengths and refrigerants
- Changes of the liquid dielectric constant (εr) do not affect operation.
- 5000 mm (197 in.) probe length with cable version
- 2-wire loop powered; no separate transformer needed
- Multi language HMI.
  Level and setting readout in mm,cm,m(ft, in.)

Technical data

Supply Voltage	14-30 V d.c. Min/Max. Value for an output of 22 mA at the terminal.	
Ambient temperature supply voltage limitations	-40°C/+80°C(–40°F / +176°F) : 16-30 V d.c. -20°C/+80°C(–4°F / +176°F) : 14-30 V d.c.	
Load	RL [Ω] ≤ ((Uext -14 V)/20 mA) – Default (Error output set to 3.6 mA) RL [Ω] ≤ ((Uext -14 V)/22 mA) – (Error output set to 22 mA)	
Cable gland	AKS 4100 PG 13, M20×1.5 ; (cable diameter: 6-8 mm (0.24-0.31in.) AKS 4100U ½ in. NPT	
Refrigerant temperature	–60°C/100°C (–76°F/212°F)	
Ambient temperature	–40°C / +80°C (–40°F / +176°F) For HMI : –20°C / +60°C (–4°F / +140°F)	
Process pressure	–1 barg / 100 barg (–14.5 psig / 1450 psig)	
Terminals (spring loaded)	0.5-1.5 mm^2 (~20-15 AWG)	
Enclosure:	IP66/67 (~NEMA type 4X)	
Mechanical connection Cable version/Coaxial version	AKS 4100:	G1 in. pipe thread. Aluminium gasket included
	AKS 4100U:	¾ in. NPT
Refrigerants	The listed refrigerants are qualified and approved by Danfoss	
	R717 / NH_3	–40°C / +50°C (–40°F / +122°F)
	R744 / CO_2	–50°C / +15°C (–58°F / +59°F)
	HCFC:	R22 –50°C / +48°C (–58°F / +118°F)
	HFC:	R404A –50°C/ +15°C (–58°F / +59°F) R410A –50°C /+15°C (–58°F / +59°F) R134a –40°C /+50°C (–40°F /+122°F)
The listed refrigerants may be used in the complete temperature range of AKS 4100/4100U, however, the accuracy may be affected if the above listed temperature range is exceeded.		
Other refrigerants within the groups of HCFC and HFC can be detected and measured if the following conditions are fulfilled:		
Reference conditions	Dielectric constant Cable version to be used in R717 / NH3, HCFC and HFC εr, liquid > 5.6	
The coaxial version is mandatory for R744 / CO_2 εr, liquid > 1.3 and marine applications.		
The coaxial version can also be used R717 / NH_3, HCFC and HFC.		

Ordering

Cable version - AKS 4100/4100U

Description	Code number With HMI	Code number Without HMI*
AKS 4100 with 5 m (197 in.) Ø2 mm (Ø0.08 in.) stainless cable and counterweight	084H4501	084H4500

AKS 4100U - Coaxial		85	084H4535	084H4529

Accessories

Description	Code number
AKS 4100/4100U HMI Service/Display unit with rear cover and mounting bracket	084H4540
AKS 4100/4100U HMI Display	084H4548

Description	Code number
AKS 4100/4100U Signal Converter **without** HMI, excluding cable gland	084H4541

* When ordering without HMI please observe:
Each AKS 4100/AKS 4100 must always be programmed via the HMI display unit.

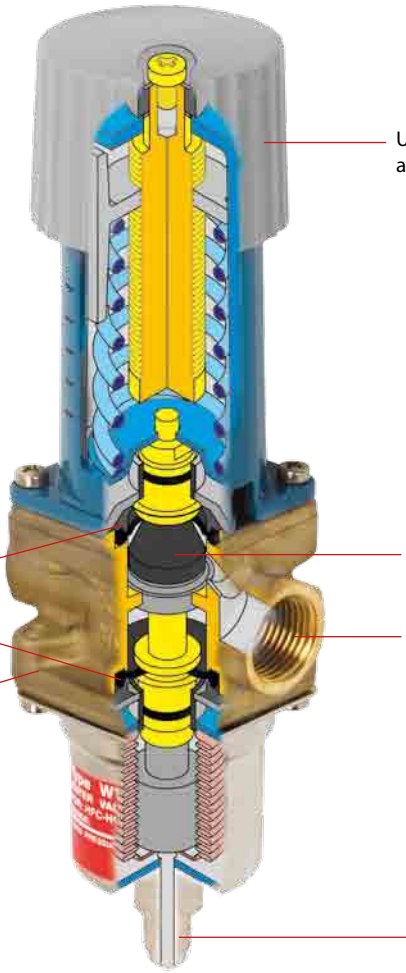
The HMI display unit can be ordered separately and there are two possibilities:
- 084H4540 AKS 4100/4100U HMI display unit with rear cover and mounting bracket. The mounting bracket is very useful when the AKS 4100/4100U have to be programmed. The same AKS 4100/4100U HMI display unit can be used to programme more AKS 4100/4100U and both Cable and Coaxial versions.
- 084H4548 AKS 4100/4100U HMI display unit (usually spare part).

Notes

WVFX, WVO and WVS – Pressure controlled water valves

Water regulating valves type WVFX, WVO and WVS are used to regulate the flow of water in refrigeration plant with water-cooled condensers.
The water valve modulates the water flow to maintain the condensing pressure at a constant level during operation. When the refrigeration plant is stopped, the cooling water flow is shut off automatically.
Valves guarantee constant proportional regulation of condensing pressure.

Features



Applications	Advantages	Facts
· Traditional refrigeration · Air conditioning units · Other applications with water-cooled condenser	· WVFX 10 - 25 can be supplied in stainless steel housing for sea water applications. · Exact pressure control - high accuracy of WVO valves up to 0.2 bar. · Reliable design - factory setting is maintained during whole life cycle · Insensitive to dirt - fit and forget solution · High permissible water pressure (MWP) - 16 bar - can be used with water towers. · Low flow version - 0,63 m^3/h (available on request)	· Below 20% of max. capacity the WVS valves will act as an on-off regulators. · WVFX 10 → 40 are direct actuated valves. · WVS 32 → 100 are servo-operated valves. · Max. condensing pressure up to 45.2 bar · Very wide media temperature range from -25 up to 130 °C · Versions with capillary tube available on request

Technical data and ordering

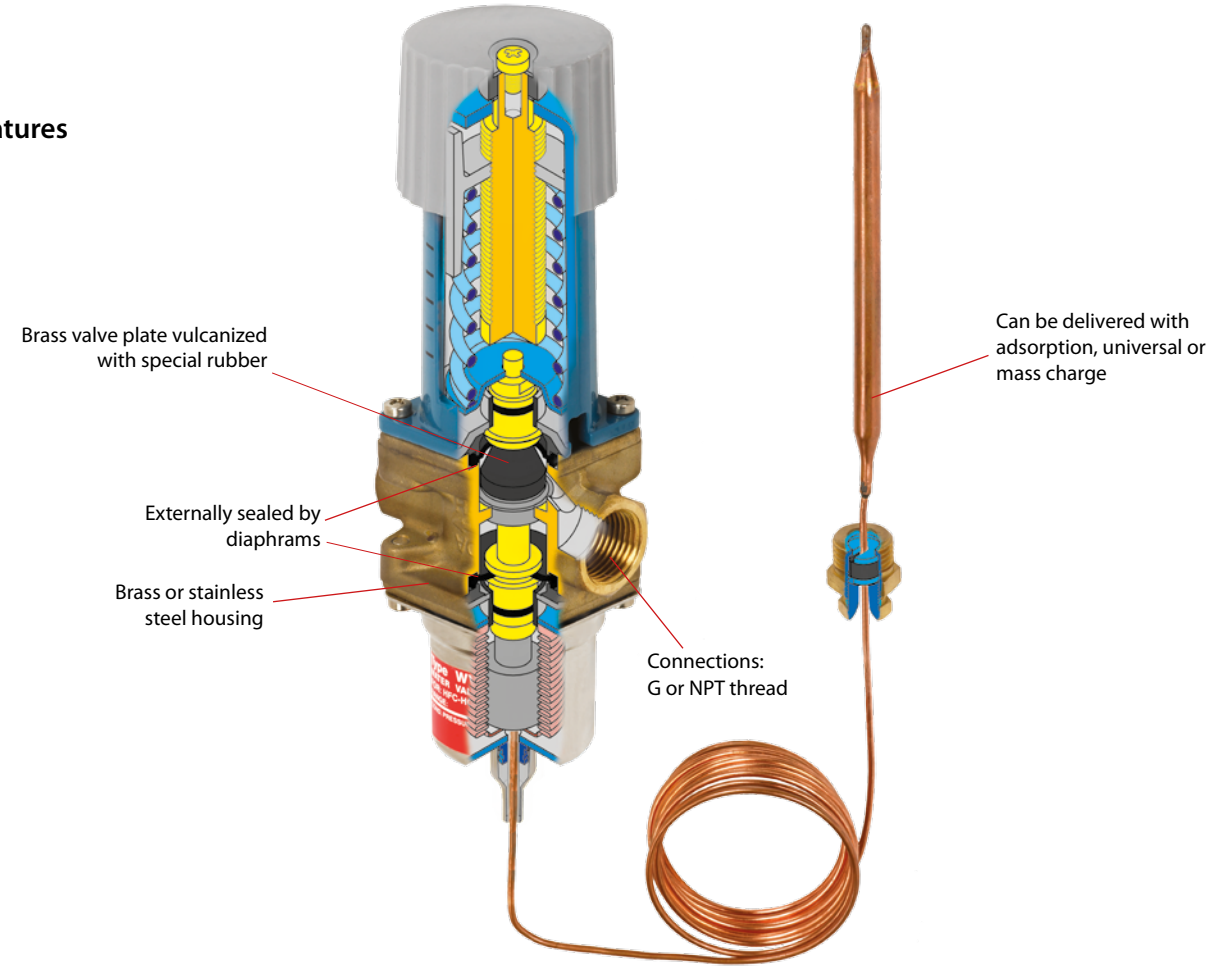
[1]) The k_v value is the flow of water in m^3/h at a pressure drop across valve of 1 bar, $\rho = 1000$ kg/m^3.

AVTA – Thermostatic water regulating valves

Thermostatic water regulating valves are used for proportional regulation of water flow quantity, depending on the setting and the sensor temperature.
The valves are self-acting, i.e. they operate without the supply of auxiliary energy such as electricity, or compressed air.
The required temperature is maintained at constant level with lowest possible water consumption in the condenser.

Features



Applications	Advantages	Facts
· Traditional refrigeration with water cooled condenser · Cooling of industrial processes	· Insensitive to dirt – fit and forget solution · Insensitive to pressure variations · Needs no power supply - self acting · The valve can be placed in any position · Operates from zero differential pressure · Unique option of hand regulation	· Differential pressure: 0 to 10 bar · Max. working pressure: 16 bar · Max. pressure on sensor: 25 bar · Opens on rising sensor temperature · The regulation range is defined for the point at which the valve begins to open · AVTA are direct actuated valves

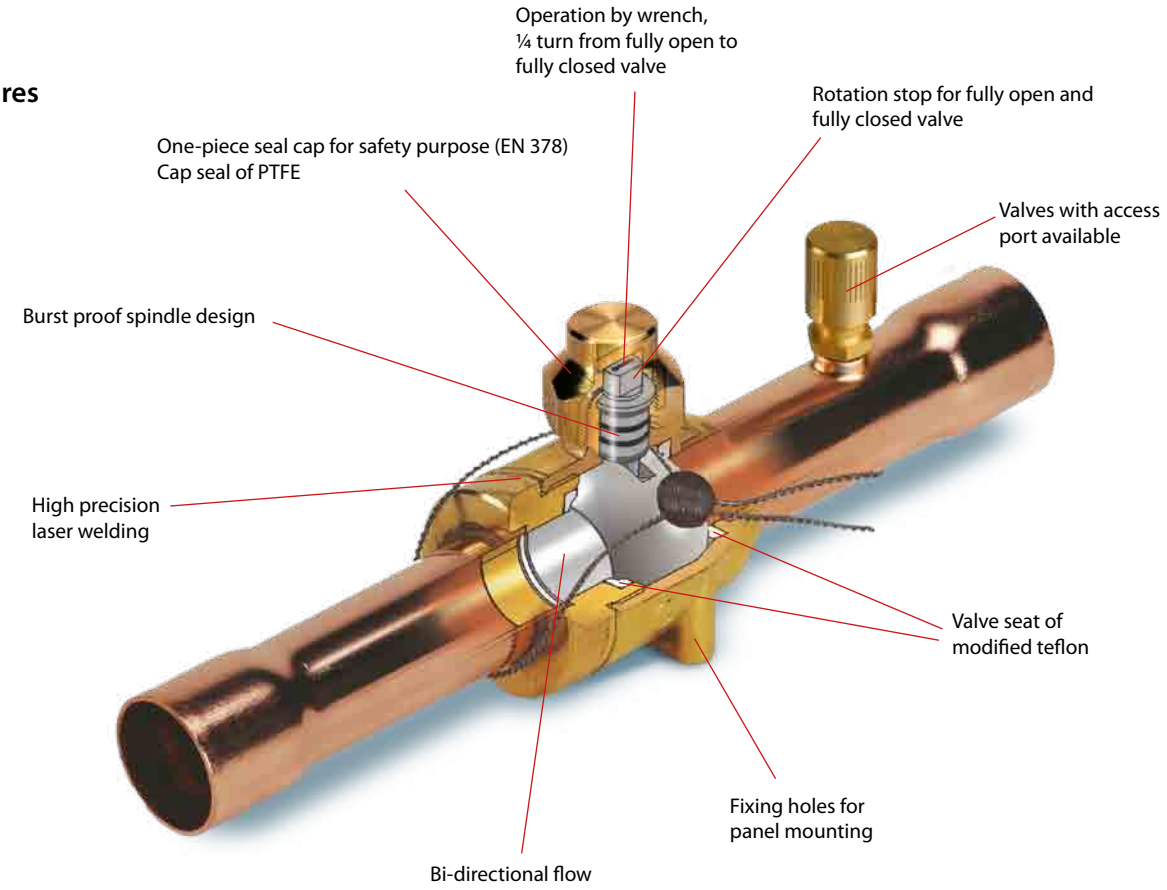
GBC - Ball valves

GBC ball valves are manually operated shut-off valves suitable for bi-directional flow. Ball valves are used in liquid, suction and hot gas lines in refrigeration, freezing and air conditioning systems. The GBC bi-directional ball valves can be delivered with or without external access port. The valves have one-piece wire seal cap to prevent unintentional cap removal or tampering between services.

Features



Applications	Advantages	Facts
• GBC valves are used in liquid, suction and hot gas lines in all refrigeration and air-conditioning systems with fluorinated refrigerants	· Full flow with minimum pressure drop · Bi-directional flow, i.e. valve orientation is unimportant · Slimline design ensures easy operational handling · Burst proof spindle design prevents liquid from being trapped internally · Valve seat of modified teflon to secure maximum tightness and a long lifetime · The available access port helps in reducing cost if service of the system is necessary · Ball status indicator on spindle top indicating open or closed position. · Laser welded construction. · Holes for panel mounting.	· GBC can be used for all fluorinated refrigerants (CFC, HCFC, HFC) · Temperature range: -40 to +150 °C · Max. working pressure (PS/MWP) - GBC 6s to 42s with/without access port: 45 bar (650 psig) - GBC 54s without access port: 45 bar (650 psig) - GBC 54s with access port: 35 bar (500 psig) - GBC 67s to 79s with/without access port: 35 bar (500 psig) · Test pressure: 65 bar (940 psig) · Approvals: UL, CE

Ordering

The product range consists of following valve types: one with and one without access port.
Both versions can be supplied in inch or millimeter sizes from 1/4 in. to 3 1/8 in. (6 mm to 79 mm). All valves have holes for panel mounting.

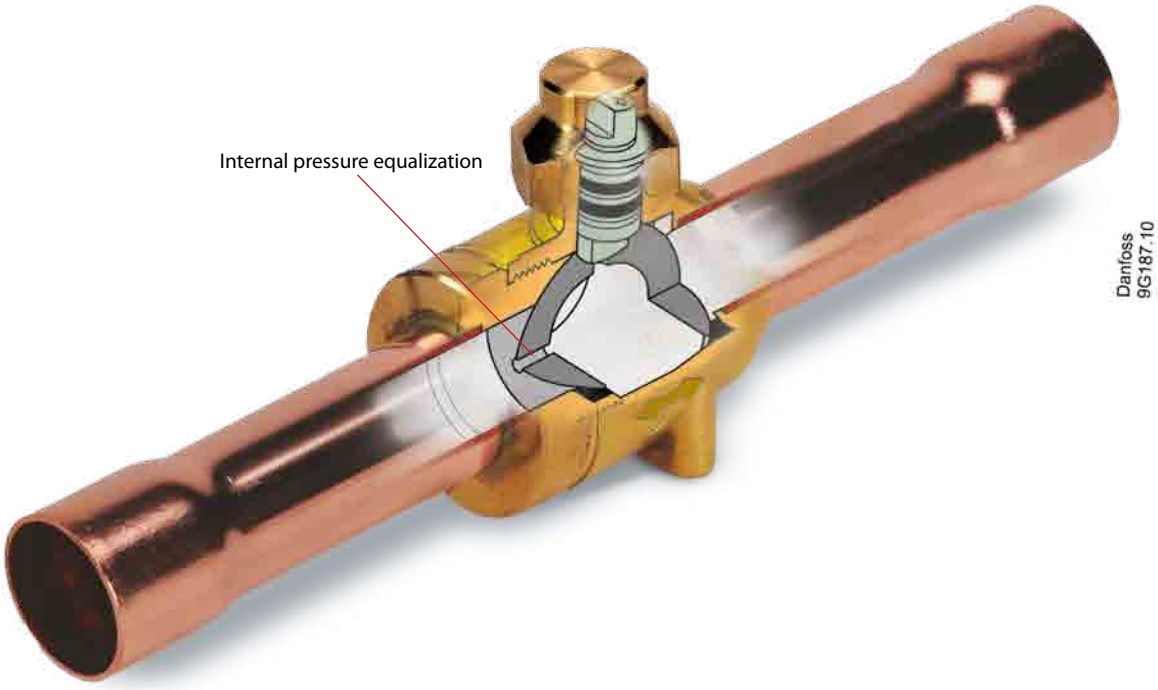
GBC – Ball valve for CO_2

Danfoss ball valves, type GBC for CO_2 are manually operated shut-off valves only for single-flow direction. These ball valves give maximum flow in the fully open position. They are designed for operation within a broad temperature range.

Features



Applications	Advantages	Facts
• The valves can be used for applications in liquid, suction and hot-gas lines in refrigeration and air-conditioning systems.	· Slimline body – easier to install and service · ¼ turn from fully open to fully closed. · Rotation stops at fully open and fully closed positions. · Indicator on spindle top shows degree of opening. · Precision laser welded construction. · Burst-proof spindle design. · Valve seal of low friction, tight-sealing modified PTFE Teflon®. · Drilled and tapped for panel mounting. · To release entrapped liquid via hole in the ball.	· Refrigerants R 744 (CO_2) · Temperature range –40 → +150 °C (–40 → +300 °F) · Max. working pressure (PS/MWP) 45 bar (653 psig) · Max. test pressure 65 bar (943 psig) · Flow direction: Single-flow · Approval: UL, CE

Ordering

The GBC for CO_2 offers the product can be supplied in inch and millimeter sizes from 1/4 in. to 1 5/8 in. (6 mm to 42 mm).
All valves have holes for panel mounting.

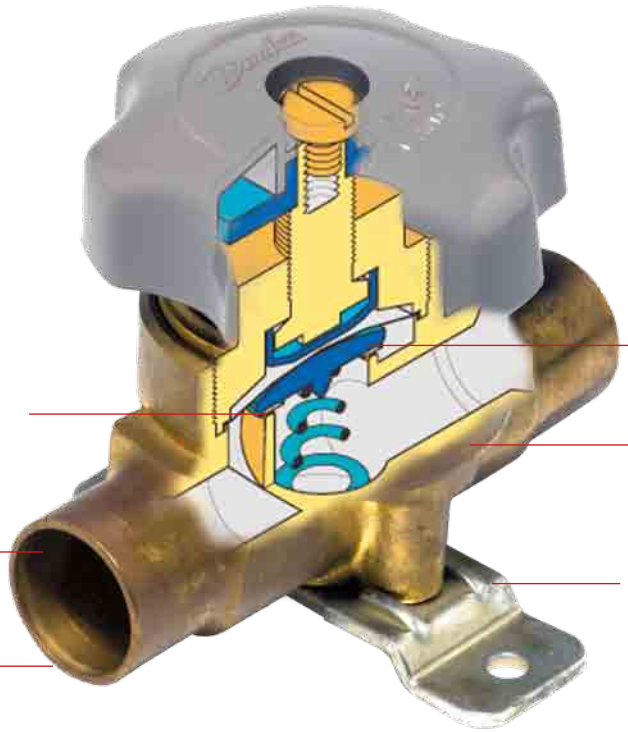
BM – Shut-off valves

The BM is a manual shut-off valve designed for installation in the liquid, suction and hot gas lines of refrigeration plant.

Features



Applications	Advantages	Facts
· Traditional refrigeration	· Fitted with three stainless steel diaphragms which ensure long operating life. · Valve plate of polyamide nylon to give complete shut-off with minimum torque. · Valve cover with counter-seat to prevent the ingress of moisture in fully open position.	· Can be used for all fluorinated refrigerants (CFC, HCFC, HFC) · Temperature range: -55 °C to +100 °C · Max. working pressure PS = 28 bar · Max. test pressure p'= 30.8 bar · Approvals: UL

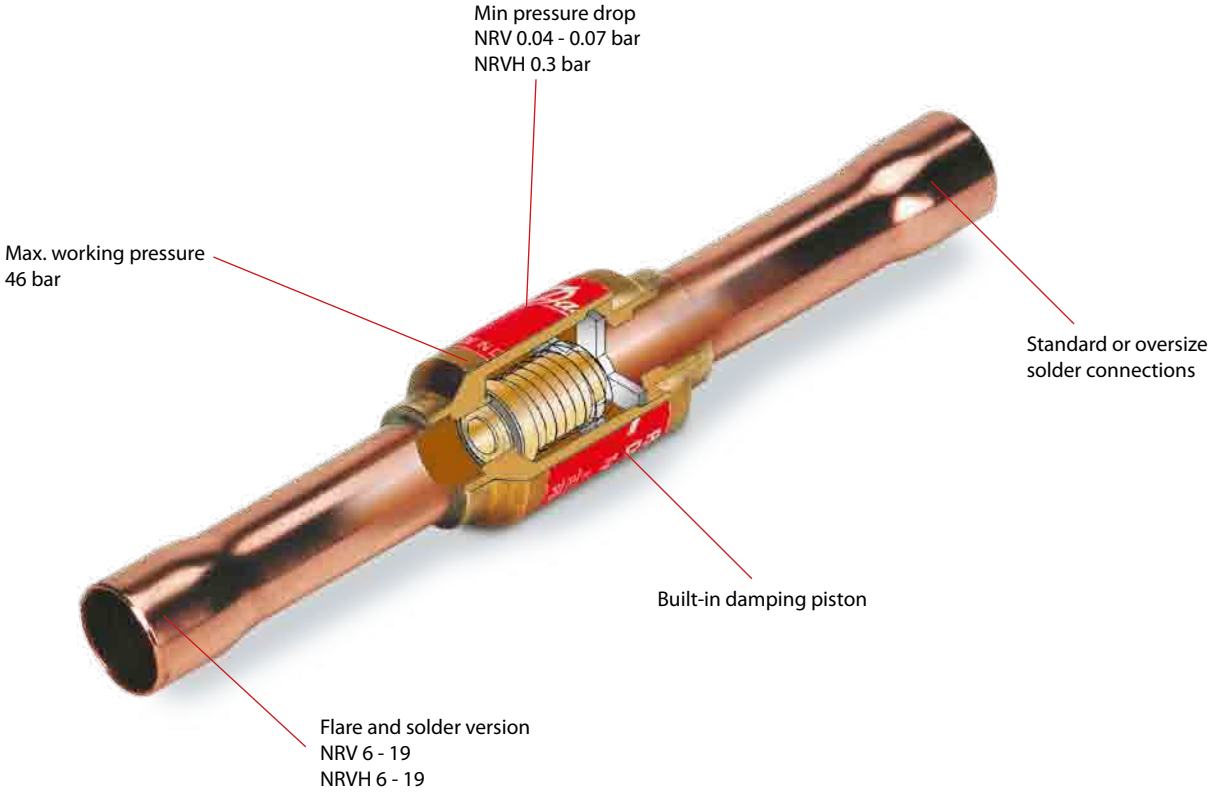
NRV/NRVH – Check valves

NRV and NRVH check valves can be used in liquid, suction and hot gas lines in refrigeration and air conditioning plants with fluorinated refrigerants. The valves ensure the correct flow direction and prevent back-condensation from a warm part of the system to the cold evaporator. A built-in damping piston makes the valves suitable for installation in lines where pulsation can occur, e.g. in the discharge line from the compressor.

Features



Applications	Advantages	Facts
· Traditional refrigeration · Heat pump systems · Air conditioning units · Liquid coolers · Transport refrigeration · UL approved	· For flourinated refrigerants · Resonance problems can be avoided at partial load in the refrigeration plant. · Oversize connections provide flexibility in use. · Prevents back-condensation from warm to cold system part. · Ensures correct flow direction.	· In refrigeration plants with compressors connected in parallel, it is advantageous to use NRVH, since the spring is stronger than in NRV. · Both straightway and angleway versions. · Max. working pressure PS/MWP = 46 bar · Max. test pressure p' = 60 bar · Temperature of the medium –50 - 140°C / –60 - 285°F

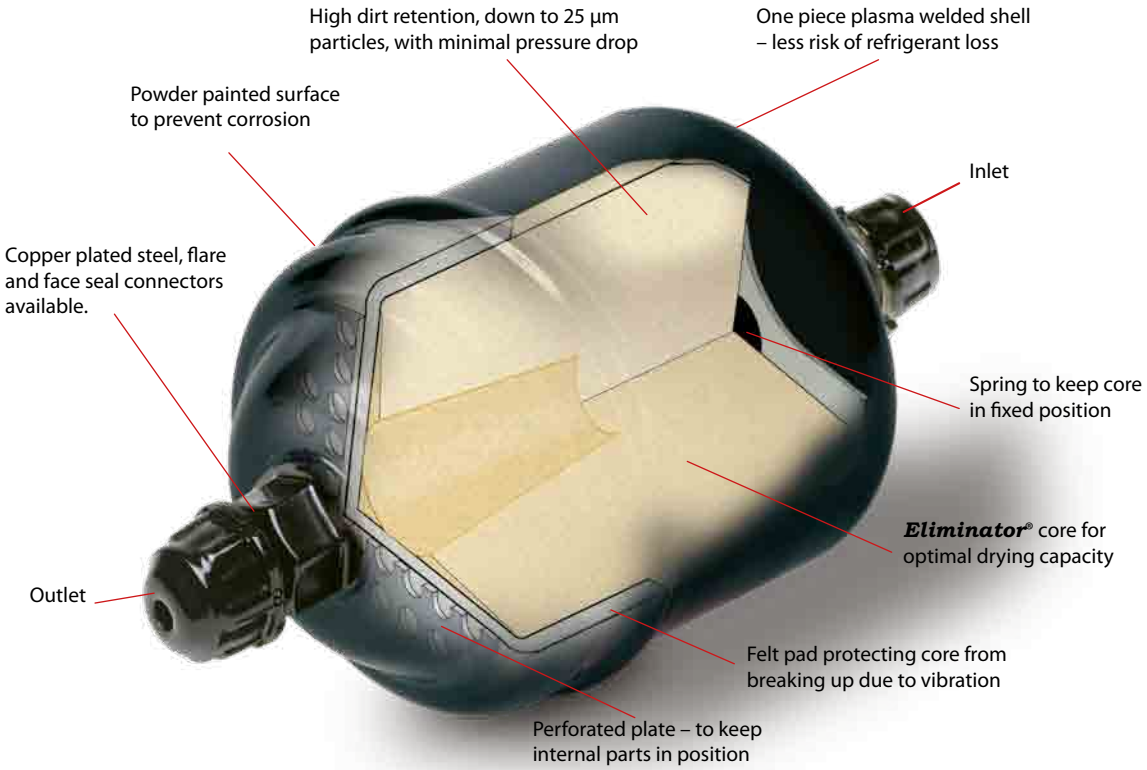
NRV 35s [3]			1⅝	020-1061	42	020-1027	0.04		
NRVH 35s [3]			1⅝	020-1073	42	020-1035	0.30		

[1] Δp = the minimum pressure at which the valve is completely open.
The NRVH with a stronger spring is used in the discharge line from compressors connected in parallel.
[2] The k_v value is the flow of water in m^3/h at a pressure drop across valve of 1 bar, $\rho = 1000\ kg/m^3$.
[3] Oversize connections.

DCL – Liquid line filter driers

The DCL liquid line filter driers protect refrigeration and air conditioning systems from moisture, acids and solid particles thus, eliminating harmful chemical reactions and abrasive impurities.

Features



Applications	Advantages	Facts
· Traditional refrigeration · Air conditioning units · Transport refrigeration	· 4 times better moisture adsorption capacity than traditional filter driers with activated alumina, at both high and low humidity levels. · High drying capacity avoiding the risk of acid formation in the refrigeration system. · Copper plated solder connections – no need of wet cloth during installation · Wide range with sizes from 3 to 75 cubic inches. · Powder paint surface for 500 hrs in salt spray (shell body)	· 80% 3Å molecular sieve with 20% activated alumina core. · Optimized for HCFC refrigerants with mineral or alkyl benzene oils and compatible with HFC refrigerants (R134a, R404A, R410A, etc.). · Thermally stable up to 120 °C · Minimal amount of binder, resistant to systems chemicals, assuring a stable core and long life. · MWP (PS): 46 bar (667 psig).

[1]) Drying capacity is based on following moisture content test standards before and after drying:
R134a: From 1050 ppm W to 75 ppm W.
If drying to 50 ppm W is required, reduce stated capacities by 15%.
R404A, R507: From 1020 ppm W to 30 ppm W.
R407C: From 1020 ppm W to 30 ppm W.
R410A: From 1050 ppm W to 60 ppm W.
R22: From 1050 ppm W to 60 ppm W in accordance with ARI 710-86

[2]) Given in accordance with ARI 710-86 for t_e = −15 °C (5°F), t_c = 30 °C (85°F) and Δp = 0.07 bar (1 psig).

[3]) Wire mesh in filter drier outlet

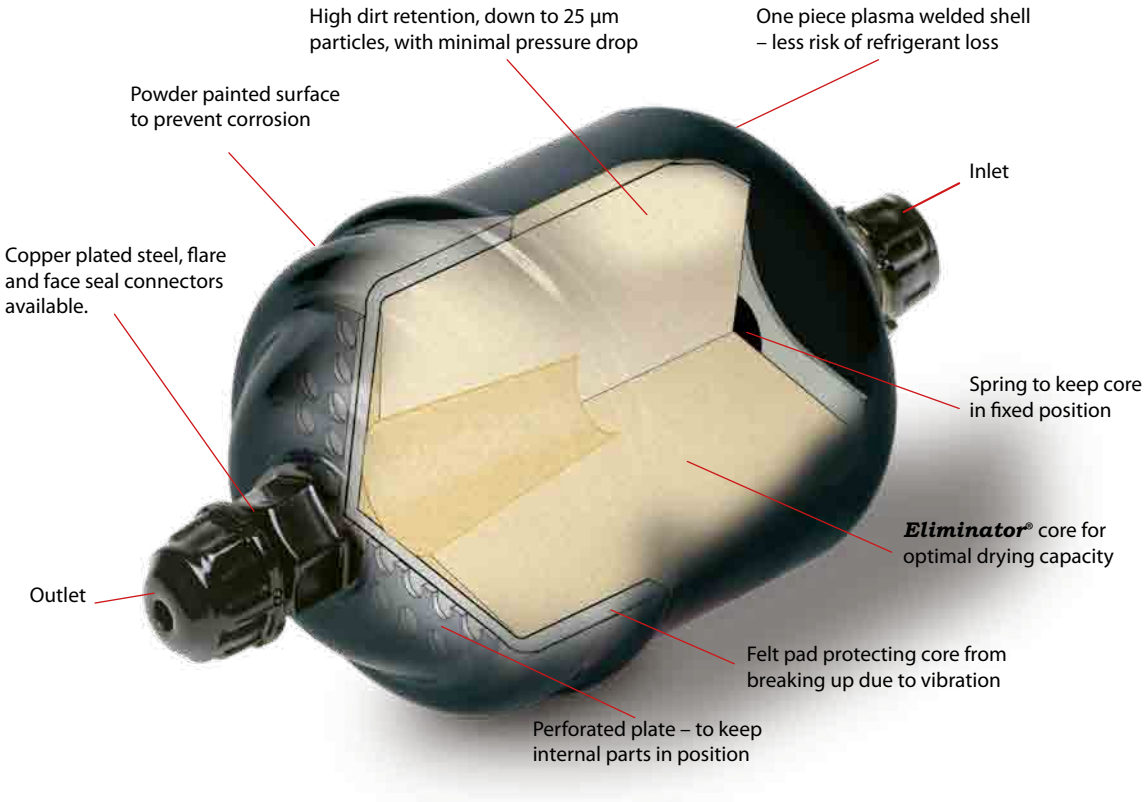
DML – Liquid line filter driers

The DML liquid line filter driers protect refrigeration and air conditioning systems from moisture, acids and solid particles. The 100% solid molecular sieve core assures a high drying capacity and prevents acid formation in the system.

Features



Applications	Advantages	Facts
· Traditional refrigeration · Air conditioning units · Transport refrigeration	· High drying capacity avoiding the risk of acid formation in the refrigeration system. · All Danfoss filter driers have end caps designed for greater protection and easy removal. · Wide range with sizes from 3 to 75 cubic inches. · Powder paint surface for 500 hrs in salt spray (shell body)	· 100% 3Å molecular sieve core. · Optimized for HFC refrigerants (R134a, R404A, R410A, etc.) with POE and PAG oils. Compatible with R22. · MWP (PS): 46 bar (667 psig). · HCFC & HFC refrigerants. · Available with flare- or solder connectors (copper-plated steel). · Wide range with sizes from 3 to 75 cubic inches.

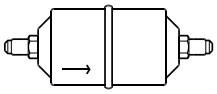
Solder version



Flare version

[1] Drying capacity is based on following moisture content test standards before and after drying:
R134a: From 1050 ppm W to 75 ppm W. If drying to 50 ppm W is required, reduce stated capacities by 15%.
R404A, R507: From 1020 ppm W to 30 ppm W.
R407C: From 1020 ppm W to 30 ppm W.
R410A: From 1050 ppm W to 60 ppm W.
R22: From 1050 ppm W to 60 ppm W in accordance with ARI 710-86.

[2] Given in accordance with ARI 710-86 for t_e = −15 °C (5°F), t_c = 30 °C (85°F) and Δp = 0.07 bar (1 psig).

[3] Wire mesh in filter drier outlet.

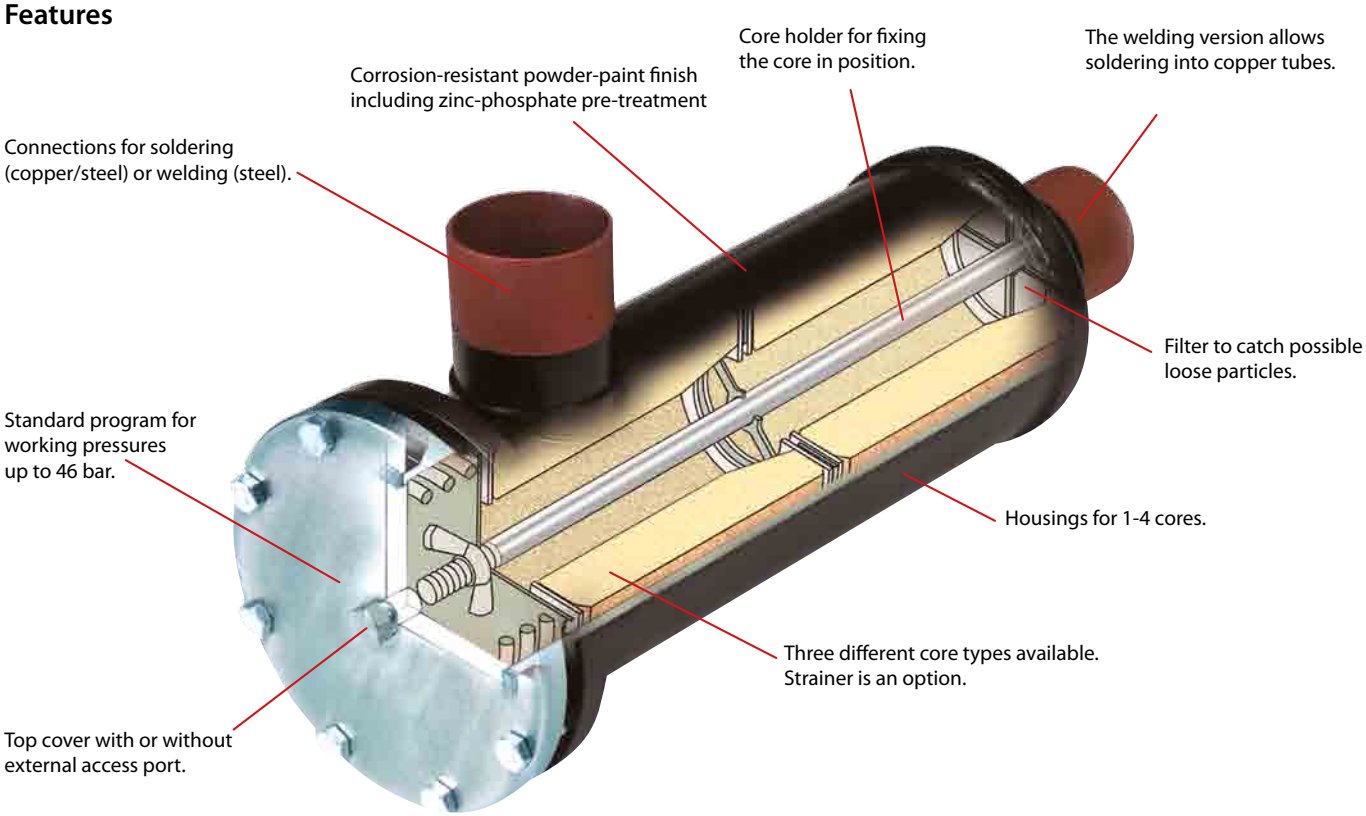
DCR – with replaceable solid core

DCR filter driers protect refrigeration, freezing and air conditioning systems from moisture, acids and solid particles. DCR filter driers, with exchangeable solid core, are for use in liquid and/or suction lines.
DCR filter driers are available both in high-pressure versions suitable for plants with R410A and CO_2 refrigerants, and in standard-pressure versions for use with fluorinated refrigerants.

Features



Applications	Advantages	Facts
· For refrigeration plants with fluorinated refrigerants or CO_2.	· Highly efficient dirt retaining capabilities on both the suction and the liquid line. · Can be used in all environments, corrosion resistant powder-painted finish in shell (body) for 500 hrs in salt spray, according to ASTM B117, ISO 12944-6 (Blistering). · The core holder requires minimum free space to remove the core for replacement. · For convenient filter drier commissioning, cover is designed to remain in place while cores, cover and housing are assembled. · Can be installed in any position.	· **48 - DM** core for liquid line application (100% molecular sieve for HFC). Provides high moisture adsorption at low and high condensing temperatures. Effective protection against impurities. · **48 - DC** core for liquid line application (80% molecular sieve and 20% activated alumina for HCFC). Effectively adsorbs moisture and acid in the system. · **48 - DA** core for suction line after a compressor burn-out (30% molecular sieve and 70% activated alumina for HCFC/HFC). · **48 - F** strainer - compatible with all refrigerants: - Retains dirt particles larger than 15 µm. - For use direct in DCR housings. - Utilized in the suction or liquid line.

[1] Drying capacity is based on the following moisture contents before and after drying:
R22: From 1050 ppm W to 60 ppm W in accordance with ARI 710-86.
R134a: From 1050 ppm W to 75 ppm W. If refrigerant is to be dried to 50 ppm W, reduce the stated capacities by 15%.
R404A, R407C & R507: From 1020 ppm W to 30 ppm W.
R410A: From 1050 ppm W to 60 ppm W.

[2] Liquid capacity given in accordance with ARI 710-2002 evaporating temperature t_e = –15 °C, condensing temperature t_c = +30 °C and pressure drop across filter drier Δp = 0.07 bar.

Capacities

Drying capacity [g of water] [3] — 48-DA

Type	Number of cores	Evaporating temperature t_e [°C]												Acid capacity [4] [g]

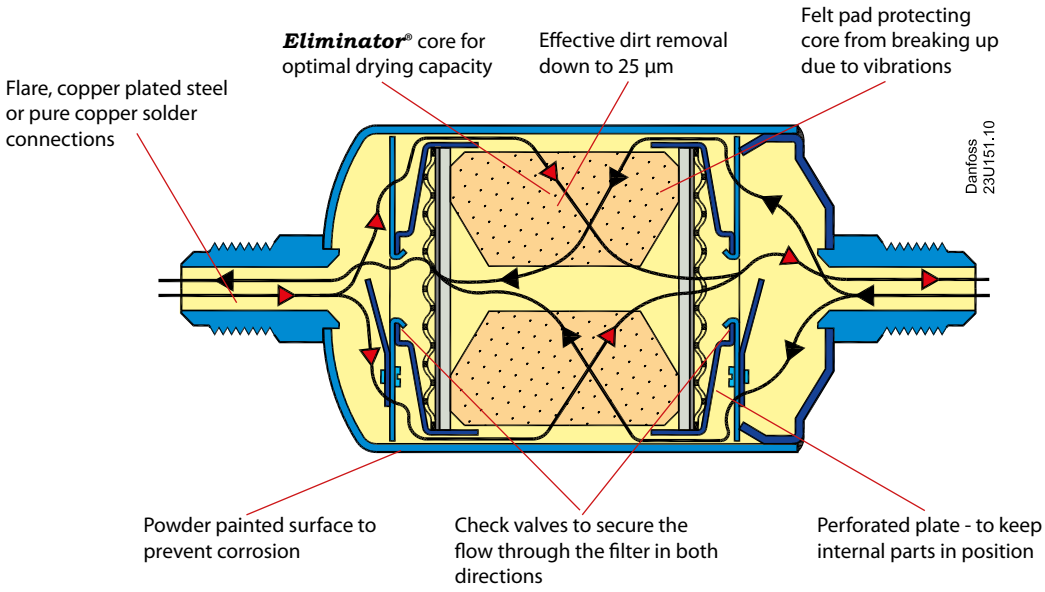
DMB – Bi-flow filter driers

Bi-flow filter driers have built-in check valves which ensure that refrigerant liquid always flows through the filter driers from the outer side of the filter core towards the center. Thus all dirt particles are retained irrespective of flow direction.
DMB filter driers ensure fast and effective adsorption of moisture as well as organic and inorganic acids.

Features



Applications	Advantages	Facts
· Traditional refrigeration · Heat pumps · Air conditioning units	· No dirt released by reversing the flow direction · The check valves are not sensitive to dirt and give minimum restriction, irrespective of flow direction · When building heat pump systems, the use of Bi-flow filters can, save up to ten solder connections. This reduces production costs and the number of potential leakage points.	· DMB filter driers contain a solid core consisting of 100% 3Å Molecular Sieve. · DMB filter driers are especially suitable for heat pumps with HFC refrigerant and polyolester oil with additives · Optimum flow characteristics and dirt retention · Optimized for HFC refrigerants.

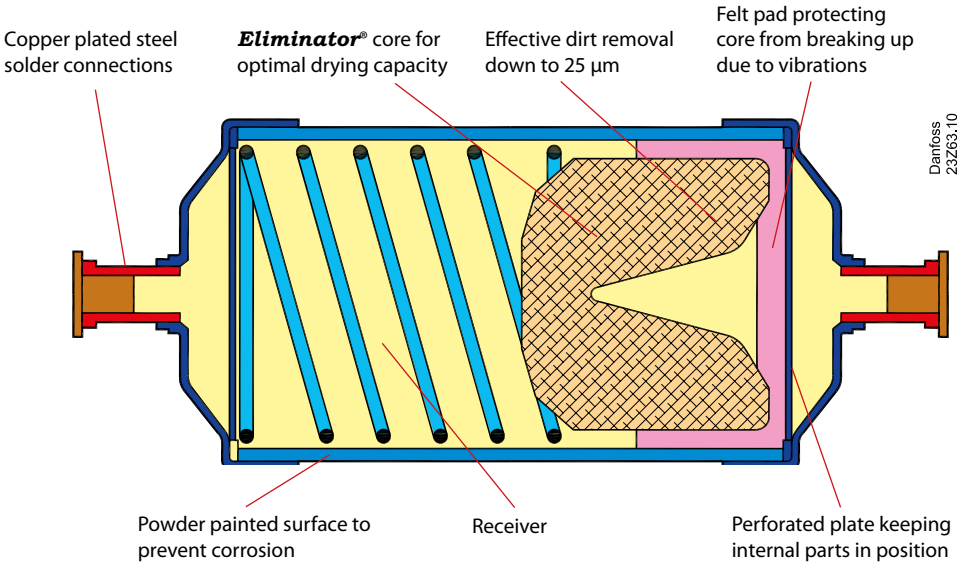
[1]) Drying capacity is based on following moisture content test standards before and after drying:
R134a: From 1050 ppm W to 75 ppm W. If drying to 50 ppm W is required, reduce stated capacities by 15%.
R404A, R507: From 1020 ppm W to 30 ppm W.
R407C: From 1020 ppm W to 30 ppm W.
R410A: From 1050 ppm W to 60 ppm W.
R22: From 1050 ppm W to 60 ppm W in accordance with ARI 710-86.

[2]) Capacity given in accordance with ARI 710-86
t_e = −15 °C (5°F)
t_c = 30 °C (86°F)
Δp = 0.07 bar (1 psig).

DMC – Combined filter driers and receivers

DMC is a combined receiver and filter drier, and is optimized to systems where the condenser is incapable of containing the total quantity of refrigerants.
DMC filters contain a solid core consisting of 100% Molecular Sieve, and are especially suitable for A/C systems with HFC refrigerant and polyolester oil with additives.

Features



Applications	Advantages	Facts
· Air conditioning systems · Heat pumps	· Combined filter drier and receiver to keep down number of components · Space-saving · Fast installation · High drying capacity at high and low liquid temperatures	· DMC filter driers contain a solid core consisting of 100% 3Å Molecular Sieve. · Available with solder connections (Cu-plated steel connectors). · Optimum flow characteristics and dirt retention. · Optimized for HFC refrigerants. · Approved as HP container according to PED 97/23/EC - a3p3.

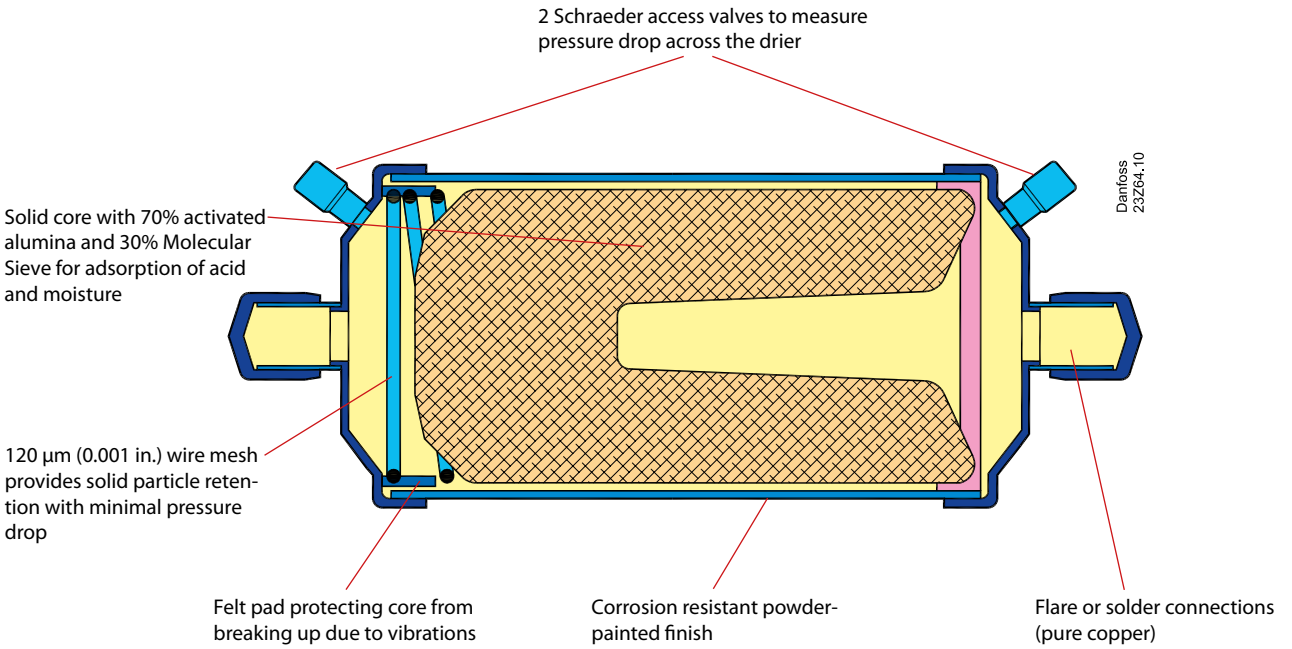
[1]) Drying capacity is based on following moisture content in the refrigerant before and after drying:
R22: From 1050 ppm W to 60 ppm W in accordance with ARI 710-86.
R134a: From 1050 ppm W to 75 ppm W. If drying of refrigerant to 50 ppm W is required, this can be achieved with a 15% reduction of the stated capacities.
R404A, R407C og R507: From 1020 ppm W to 30 ppm W.
R410A: From 1050 ppm W to 60 ppm W.

[2]) Given in accordance with
ARI 710-86 for
t_e = –15 °C (5°F),
t_c = 30 °C (86 °C) and
Δp = 0.07 bar (1 psig).

DAS – Burn-out suction line filter driers

Eliminator® burn-out filter driers type DAS are used in the suction line to clean up refrigeration and AC-systems with flourinated refrigerants after a compressor motor burn-out.
The solid core, which is composed of 70% activated alumina and 30% Molecular Sieve, adsorbs harmful acids as well as moisture. By adsorbing these acids, the DAS burn-out filter drier protects the new compressor against failure.

Features



Applications	Advantages	Facts
· Traditional refrigeration · Air conditioning units · Transport refrigeration	· The large diameter of the burn-out filter drier means that flow velocity is suitably low and the pressure drop minimal. · Bonded solid core grains eliminate powder formation. · Corrosion resistant powder-painted finish (shell for 500 hrs in salt spray chamber)	· Installation with any orientation provided the flow is in the arrow direction · Available in sizes from 8 to 60 cubic inches · For use with HCFC and HFC refrigerants

[1]) Rated capacity is stated at:
evaporating temperature t_e = 4 °C
pressure drop Δp = 0.21 bar

[2]) Adsorption capacity of oleic acid at 0.05 TAN (Total Acid Number).

Capacities for other temperatures than 4 °C are calculated by use of correction factors. Divide your actual evaporator capacity with the correction factor given for your actual evaporating temperature.
Look up the capacity table for the necessary rated capacity.

$Q_e / F_e = Q_n$

Q_e = Actual evaporator capacity
Q_n = Nominal capacity
F_e = Correction factor

Correction factors. F_e evaporating temperatures [°C]

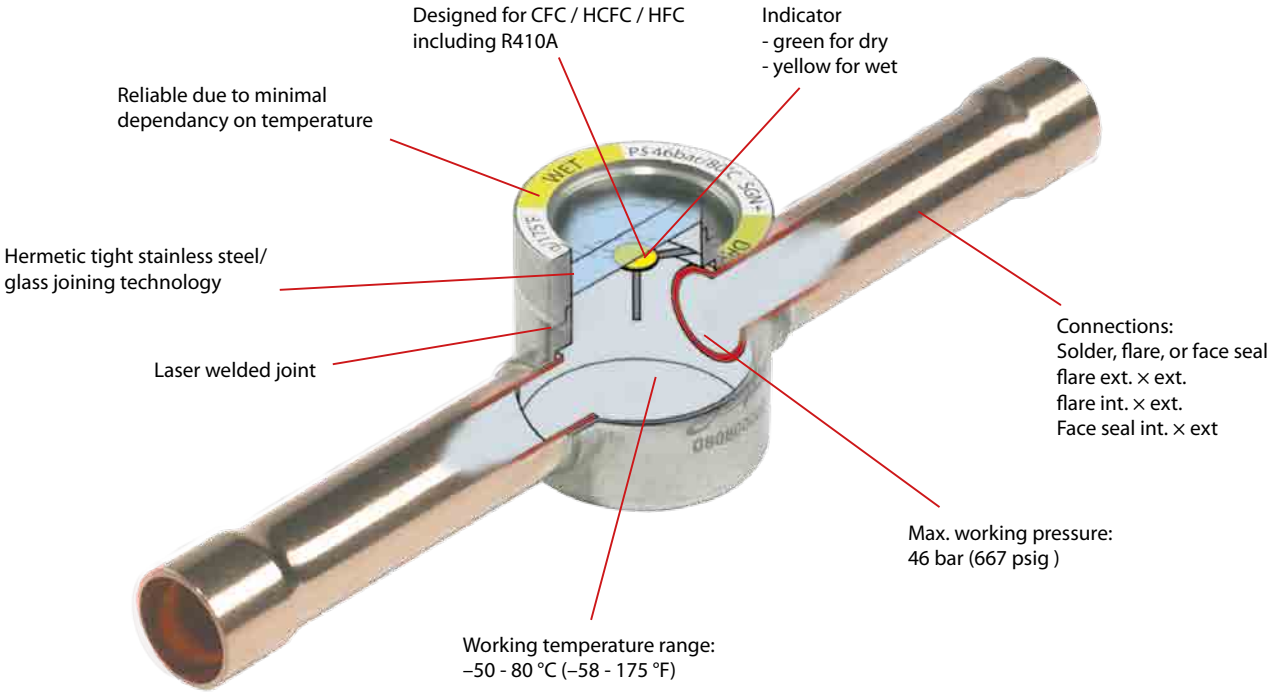
[°C]	4	0	–5	–10	–15	–20	–25	–30	–35	–40
F_e	1	0.9	0.75	0.6	0.5	0.4	0.35	0.25	0.2	0.15

Example
To select a burn-out filter drier for a R22 plant with an evaporator capacity at 8.5 kW at –20 °C you may use a burn-out filter drier with a rated capacity of 8.5/0.4 = 21.25 kW or bigger.
For example DAS 306.

SG+ – High pressure sight glasses

SG+ are sight glasses for commercial refrigeration applications. They are made in stainless steel and are available in versions with flare and solder connections.
The SGM+ are mainly used to indicate the condition of the refrigerant as well as the liquid level in the receiver or the oil level in the compressor.
The SGN+ are equipped with sensitive indicators that reflects a colour, depending on the moisture content in the refrigerant.

Features



Applications	Advantages	Facts
· Traditional refrigeration · Heat pump systems · Air conditioning units · Liquid coolers · Transport refrigeration	· Visual indication of moisture: - Minimum dependence of temperature. - Quick and clear colour change. · The flare ext. × int. version can be screwed together with filter drier (reduction of assembly costs). · Flare connections are 4-sided for quick installation. · All solder versions are with extended ends. · Designed for high working pressures.	· Designed for CFC/HCFC/HFC refrigerants. · Connections: - Solder × solder - Flare ext. × ext. - Flare int. × ext. - Face seal int. × ext. · Wide range with sizes from 6 to 22 mm. · Max. working pressure: 46 bar (667 psig) · Working temperature: –50 - 80 °C (–58- 175 °F) · Approvals: UL, CE.

Available types

 Solder version  Flare version	**SGM+:** Without moisture indicator

 Solder version  Flare version	**SGN+:** With HFC moisture indicator

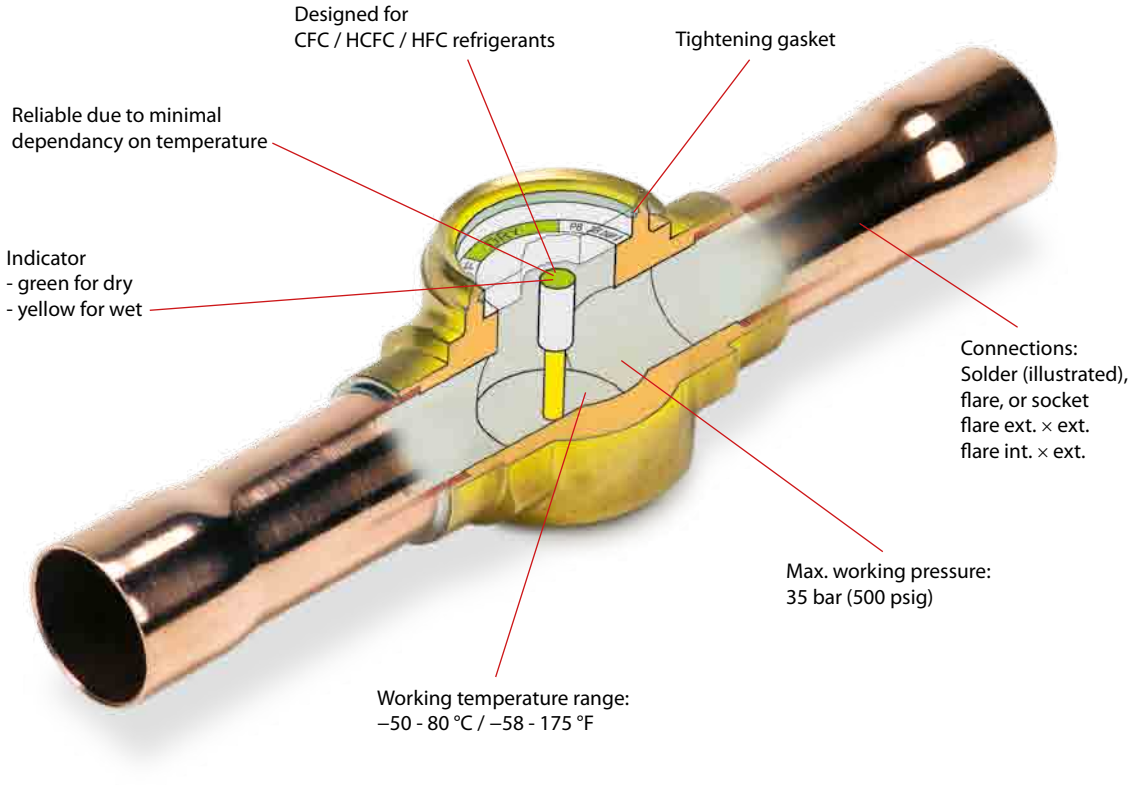
SG – Standard sight glasses

SG are sight glasses for commercial refrigeration applications. They are made in brass and are available in versions with flare, solder, face seal or socket connections.
The SG and SGR are mainly used to indicate the condition of the refrigerant as well as the liquid level in the receiver or the oil level in the compressor.
The SGI/SGN and SGRI/SGRN are equipped with sensitive indicators that change colour depending on the moisture content in the refrigerant.

Features



Applications	Advantages	Facts
· Traditional refrigeration · Heat pump systems · Air conditioning units · Liquid coolers · Transport refrigeration	· Visual indication of moisture (minimal dependence on temperature). · The flare ext. × int. version can be screwed together with filter drier (reduction of assembly costs). · Flare connections are 4-sided for quick installation. · Solder versions available with extended ends. · Designed for high working pressures.	· Designed for CFC/HCFC/HFC refrigerants. · Connections: · Connections: - Solder × solder - Flare ext. × ext. - Flare int. × ext. - Socket · Wide range with connection sizes from 6 - 22 mm. · Max. working pressure: 35 bar (500 psig). · Working temperature: –50 - 80 °C (–58 - 175 °F).

Available types

 Solder version	**SG:** Sight glass, no indicator
 Solder version	**SGI:** for refrigerants with mineral oils (CFC/HCFC), with indicator
 Flare version	**SGN:** for refrigerants with POE oils (HFC), with indicator

 Socket	**SGR:** Socket sight glass, no indicator
 Socket  Saddle	**SGRI:** Saddle sight glass for refrigerants with mineral oils (CFC/HCFC), with indicator **SGRN:** Saddle sight glass for refrigerants with POE oils (HFC), with indicator

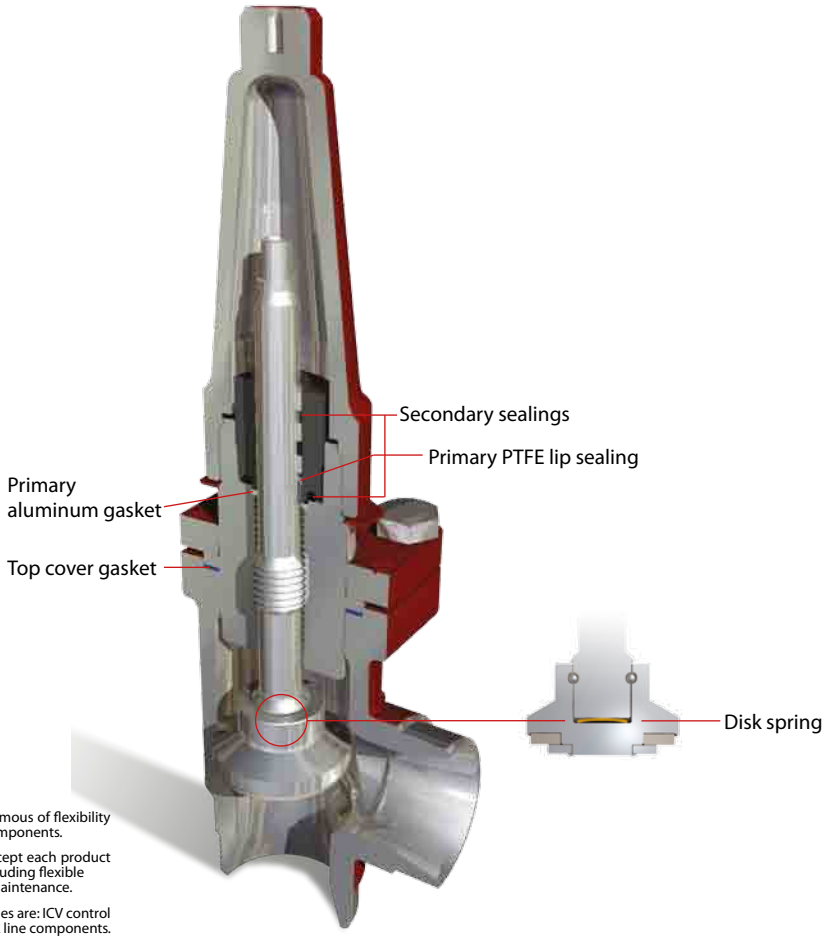
SVA-S and SVA-L – Flexline™ Stop valves

SVA Stop valves are available in angleway and straightway versions and with Standard neck (SVA-S) and Long neck (SVA-L).
The stop valves are designed to meet all industrial refrigeration application requirements and are designed to give favourable flow characteristics and are easy to dismantleand repair when necessary.



The Flexline™ platform is synonymous of flexibility within industrial refrigeration components.

Based on a modular design concept each product features a variety of benefits, including flexible selection, easy installation and maintenance.

The products in the Flexline™ series are: ICV control valves, ICF valve stations and SVL line components.

Advantages and features

- Applicable to all common refrigerants including flammable hydrocarbons and all non-corrosive gases/liquids.
  Can be used in chemical and petro-chemical applications.
- Optional accessories:
  - Heavy duty industrial hand wheel for frequent operation.
  - Cap for infrequent operation.
- Available in angleway and straightway versions with Standard neck or Long neck (DN 15 to DN 40) for insulated systems.
- Each valve type is clearly marked with type, size and performance range.
- The valves and caps are prepared for sealing, to prevent operation by unauthorized persons, using a seal wire.
- Internal metal backseating:
  - DN 6 - 65 (¼ - 2½ in.)
  Internal PTFE backseating:
  - DN 80 - 200 (3 - 8 in.)
- Can accept flow in both directions.
- Housing and bonnet material is low temperature steel according to requirements of the Pressure Equipment Directive and other international classification authorities.
- Equipped with stainless steel bolts.
- Max. working pressure: 52 bar g (754 psi g)
  Temperature range: –60/+150°C (–76/+302°F)
- Classification: DNV, CRN, BV etc.

Technical data and code numbers

Technical data

- *Refrigerants*
  Applicable to all common refrigerants including flammable hydrocarbons and all non-corrosive gases/liquids.
  For further information please see installation instruction for SVA.
- *Temperature range* –60/+150°C (–76/+302°F).
- *Pressure range* The valves are designed for max. working pressure 52 bar g (754 psi g).

Ordering SVA-L

Example:
SVA-L 20 DIN angleway with hand wheel = **148B5340**

Important!
Where products need to be certified according to specific certification societies or where higher pressures are required, the relevant information should be included at the time of order.

ANG = Angleway
STR = Straightway

CAP = Cap
H-WHEEL = Hand wheel

SNV-ST/SNV-SS – Stop needle valves

SNV valves are designed to meet all industrial refrigeration application requirements.
Designed as service valves they provide favourable flow characteristics. Available in standard version with normal or extended tube.

Advantages and features

- Applicable to all common refrigerants including R717 and R744 (CO_2) and non corrosive gases/liquids.
- Suitable for "heavy duty" industrial applications having a very sturdy and safe design including high pressures and wide temperature range.
- The SNV-ST and SNV-SS valves have backseating (metal to metal).
- Compact and light valve for easy handling and installation
- No special flow direction required.
- Provide high flow characteristics.
- Each valve type is clearly marked with type and size.
- Housing and bonnet material is low temperature steel (stainless steel for SNV-SS) according to requirements of the Pressure Equipment Directive and other international classification authorities.
- Valve safety is enhanced with the spindle being secured such that it cannot be unscrewed.
- Max. operating pressure:
  52 bar g (754 psig)
  Valves for higher operating pressure available on request
- Full temperature range:
  –60/+150°C (–76/+302°F)

Technical data and code numbers

Technical data

- *Refrigerants*
  Applicable to all common refrigerants including R 717 and R744 (CO_2) and non corrosive gases/liquids. For further information please see installation instruction for SNV-ST.
- *Temperature range* –60/+150°C (–76/+302°F).
- *Maximum working pressure* The valve is designed for: Maximum operating pressure of 52 bar g (754 psig).
  Valves for higher operating pressure available on request.

Code numbers

How to order
The table below is used to identify the valve required.
Please note that the type codes only serve to identify the valves, some of which may not form part of the standard product range.

Important!
Where products need to be certified according to specific certification societies or where higher pressures are required, the relevant information should be included at the time of order.

FIA – Flexline™ Filters (SVL platform)

FIA filters are a range of angleway and straightway filters, which are carefully designed to give favourable flow conditions. The design makes the filter easy to install, and ensures quick filter inspection and cleaning.

The Flexline™ platform is synonymous of flexibility within industrial refrigeration components.

Based on a modular design concept each product features a variety of benefits, including flexible selection, easy installation and maintenance.

The products in the Flexline™ series are: ICV control valves, ICF valve stations and SVL line components.

Advantages and features

- Housing is standard SVA angleway or straightway housing allowing other inserts from the SVL platform to be installed.
- Applicable to all common refrigerants including flammable hydrocarbons and all non-corrosive gases/liquids. Can be used in chemical and petro-chemical applications.
- Filter net of stainless steel mounted direct without extra gaskets means easy servicing.
- Two types of filter inserts are available:
  - A plain insert of stainless steel.
  - A pleated insert (DN 15-200) with extra large surface, which ensures long intervals between cleaning and low pressure drop.
- FIA 15-40 (½ – 1 ½ in.):
  A special insert (50µ) can be used in combination with a standard version when cleaning a plant during commissioning.
- FIA 50-200 (2 - 8 in.):
  A large capacity filter bag (50µ) can be inserted for cleaning plant during commissioning.
- FIA 50-200 (2 - 8 in.) can be equipped with a magnetic insert for detention of iron particles and other magnetic particles.
- Each filter clearly marked with type, size and performance range
- Housing and bonnet of low temperature steel in accordance with the requirements of the Pressure Equipment Directive and those of other international classification authorities
- Temperature range:
  –60/+150°C (–76/+302°F)
- Max. working pressure:
  52 bar g (754 psi g)

Technical data, code numbers and accessories

Technical data

- *Refrigerants*
  Applicable to all common refrigerants including flammable refrigerants and all non-corrosive gases/liquids. For further information please see installation instruction for FIA.
- *Temperature range*
  –60°C/+150°C (–76°F/+302°F).
- *Max. working pressure:*
  52 bar g (754 psi g).

Code numbers

The table below is used to identify the filter required. Please note that you have to order **FIA filter without element, a filter element** and **accessories.**

Example:
FIA 50 D ANG + FIA-X 50 150µ Filter Element + Filter Bag =
148H5912 + **148H3130** + **148H3150**

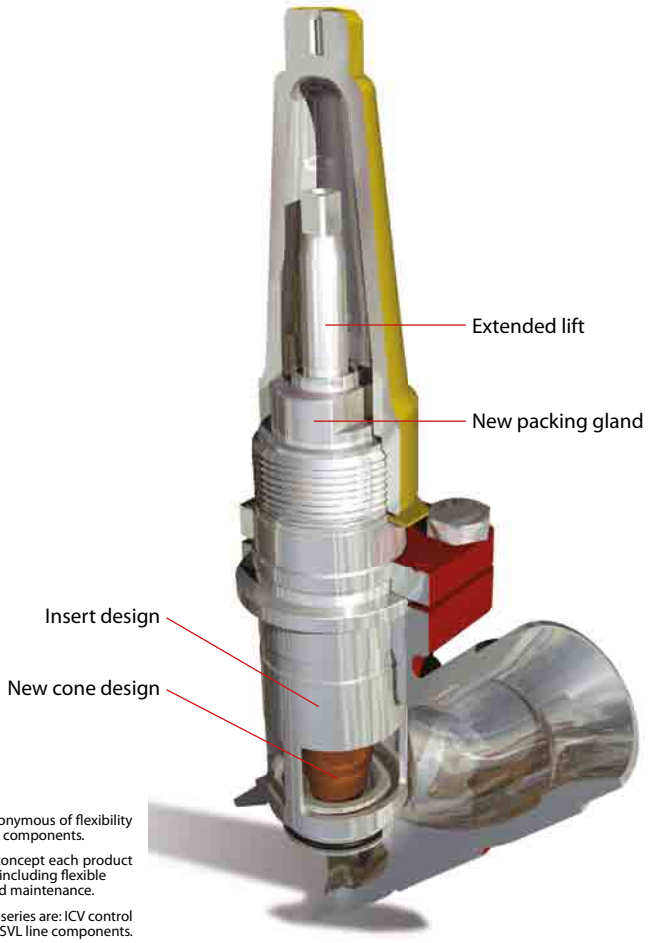
Notes

REG-SA and REG-SB – Flexline™ Regulating valves

REG-SA and REG-SB are angleway and straightway hand regulating valves, which act as normal stop valves in closed position.
The valves are available in two different versions – REG-SA is for use in expansion lines (cone type A), while REG-SB is designed for regulation purposes in liquid lines (cone type B).



The Flexline™ platform is synonymous of flexibility within industrial refrigeration components.

Based on a modular design concept each product features a variety of benefits, including flexible selection, easy installation and maintenance.

The products in the Flexline™ series are: ICV control valves, ICF valve stations and SVL line components.

Advantages and features

- Housing is Standard SVL angleway or straightway housing allowing other inserts from the SVL platform to be installed. Applicable to all common non-flammable refrigerants and all non-corrosive gases/liquids.
  Can be used in chemical and petro-chemical applications.
- Designed to ensure perfect regulation
- Internal backseating enables replacement of the spindle seal whilst the valve is active, i.e. under pressure.
- Easy to disassemble for inspection and possible repair.
- Max. operating pressure:
  52 bar g (754 psi g)
- Temperature range:
  –60/+150°C (–76/+302°F)
- Acts as a normal stop valve in closed position.
- Housing and bonnet material is low temperature steel according to requirements of the Pressure Equipment Directive and other international classification authorities.

Technical data and code numbers

Technical data

- *Refrigerants*
  Applicable to all common non-flammable refrigerants and all non-corrosive gases/liquids.

  Can be used in chemical and petro-chemical applications.
- *Temperature range*
  –60/+150°C (–76/+302°F)
- *Max working pressure*
  52 bar g (754 psi g)
- *Flow coefficients*
  Flow coefficients for fully opened valves from k_v = 0.15 to 80 m^3/h (C_v = 0.17 to 92.5 USgal/min).

Notes

SCA-X – Flexline™ Stop check valves and CHV-X – check valves

SCA-X are check valves with a built-in stop valve function. CHV-X are check valves only. SCA-X/CHV-X are available in angleway versions.
The valves are designed to open at very low differential pressures, allow favourable flow conditions and are easy to disassemble for inspection and service.

The Flexline™ platform is synonymous of flexibility within industrial refrigeration components.

Based on a modular design concept each product features a variety of benefits, including flexible selection, easy installation and maintenance.

The products in the Flexline™ series are: ICV control valves, ICF valve stations and SVL line components.

Advantages and features

- Applicable to all common non-flammable refrigerants and all non-corrosive gases/liquids.
  Can be used in chemical and petro-chemical applications.
- Housing is Standard SVL angleway housing allowing other inserts from the SVL platform to be installed.
- Designed to open at a very low differential pressure of 0.04 bar (0.58 psig).
- Designed with a built-in damping chamber preventing valve flutter in case of low refrigerant velocity and/or low density.
- Each valve is clearly marked with type, size and performance range.
- Easy to disassemble for inspection and service.
- Internal backseating enables replacement of the spindle seal whilst the valve is active, i.e. under pressure.
- Optimal flow characteristics ensuring quick opening to the fully open position.
- Protection against pulsation by built-in damping facility.
- Housing and bonnet material is low temperature steel according to requirements of the Pressure Equipment Directive and other international classification authorities.
- Equipped with Stainless steel bolts.
- Max. working pressure:
  52 bar g (754 psi g)
- Temperature range:
  –60°C/+150° (–76°F/+302°F)

Technical data and code numbers

Technical data

The products are also available in stainless steel.
Please refer to the Danfoss brochure DKRCI.PD.K00.A for further details or contact your local Danfoss sales office.

NRVA – Check valves

Check valve type NRVA can be used in liquid, suction and hot gas lines in refrigeration and air conditioning plant with ammonia.
NRVA can also be used in refrigerating systems with fluorinated refrigerants.

Advantages and features

- Ensures correct direction of flow.
- Valve housing made of steel.
- Available for 40 bar g (580 psig) working pressure.
- Large range of flanges with connection dimensions in accordance with standards: DIN, ANSI, SOC, SA and FPT.
- Fitted with damping piston that makes the valves suitable for installation in lines where pulsation can occur, e.g. in the discharge line from the compressor.

Technical data and code numbers

Technical data

- *Refrigerants*
  Can be used for all normal, non-flammable refrigerants, including R 717, and non-corrosive gases/liquids – assuming seals of the correct material are used.For further information please see installation instruction for NRVA.
  Use with flammable hydrocarbons cannot be recommended.
- *Temperature range:* –50°C / +140°C (–58°F / +284°F).
- *Pressure range* The valve is designed for: Max. working pressure: 40 bar g (580 psig).

[1] A special type spring can be supplied to replace the standard valve spring.
[2] Δp = the minimum pressure differential at which the valve is completely open.
[3] The k_v value is the flow of water in m³/h at a pressure drop across valve of 1 bar, ρ = 1000 kg/m³.
[4] The C_v value is the flow of water in gal/min at a pressure drop across valve of 1 psig, ρ = 10 lbs/gal.

SFA 15 – Safety relief valves

SFA 15 are standard, back pressure dependent safety relief valves in angle-way execution, specially designed for protection of vessels and other components against excessive pressure. The valve is designed to meet the strict quality demands and safety requirements for refrigeration installations, specified by the international classification societies.The inlet flow diameters of the valves are: 13 mm (½ in.) for SFA 15The valves can be delivered with set pressures between 10 and 40 bar g (145 and 580 psi g).

Advantages and features

- Applicable for the refrigerants R717 (ammonia, NH_3), HFC, HCFC (e.g. R22, R134a, R404A) and other refrigerants (dependent on sealing materials compatibility) within a temperature range of –30°C/+100°C (–22°F/+212°F).

Technical data and code numbers

Technical data

- Refrigerants
  Applicable for the refrigerants R717 (ammonia, NH_3), HFC, HCFC (e.g. R22, R134a, R404A) and other refrigerants dependent on sealing material compatibility within a temperature range of –30°C/+100°C (–22°F/+212°F).
  Flammable hydrocarbons are not recommended.
- Pressure
  Pressure setting range: 10 - 40 bar g
  (145 - 580 psi g).

  Important: The SFA safety relief valve is dependent on the back pressure (if the back pressure is higher than the atmospheric pressure, the opening pressure will be higher than stated set pressure).

  Special circumstances such as vibrations (which should be avoided) and oscillating pressure may require an increased difference between the operational pressure and the closing pressure.
- Pressure setting
  The operating pressure of the plant should be at least 15% below the set pressure. This allows a perfect re-seating of the safety relief valve after having been activated.
- Temperature range
  –30/+100°C (–22/+212°F)

SFV – Safety relief valves

SFV 20-25 are standard, back pressure dependent safety relief valves in angle-way execution, specially designed for protection of vessels and other components against excessive pressure.
The valve is designed to meet the strict quality demands and safety requirements for refrigeration installations, specified by the international classification societies. The inlet flow diameters of the valves are: 18 mm (3/4 in.) for SFV 20, and 23 mm (1 in.) for SFV 25. The valves can be delivered with set pressures between 10 and 25 bar g (145 and 363 psi g).

Advantages and features

- Applicable for the refrigerants R717 (ammonia, NH_3), HFC, HCFC (e.g. R22, R134a, R404A) and other refrigerants (dependent on sealing materials compatibility) within a temperature range of –30°C/+100°C (–22°F/+212°F).

Technical data and code numbers

Technical data

- Refrigerants
  Applicable for the refrigerants R717 (ammonia, NH_3), HFC, HCFC (e.g. R22, R134a, R404A) and other refrigerants dependent on sealing material compatibility within a temperature range of –30°C/+100°C (–22°F/+212°F). Flammable hydrocarbons are not recommended.
- Pressure
  Pressure setting range: 10 - 25 bar g (145 - 363 psi g).

  The valves are designed for:
  Strength test: 43 bar g (624 psi g)
  Leakage safety: Same as set pressure

Important: The SFV safety relief valve is dependent on the back pressure (if the back pressure is higher than the atmospheric pressure, the opening pressure will be higher than stated set pressure).
Special circumstances such as vibrations (which should be avoided) and oscillating pressure may require an increased difference between the operational pressure and the closing pressure.

- Pressure setting
  The operating pressure of the plant should be at least 15% below the set pressure. This allows a perfect re-seating of the safety relief valve after having been activated.
- Temperature range
  –30/+100°C (–22/+212°F)

DSV – Double stop valves

DSV 1 and DSV 2 are 3-way valves, which are designed to meet all industrial refrigeration application requirements. They are designed specifically for use with double safety valve systems.
The valves are designed to give favourable flow characteristics and are easy to dismantle for servicing. The valve cone is designed to ensure perfect closing, even with minimum torque the valve will close effectively.

Advantages and features

- Applicable to all common non flammable refrigerants including R717 and non corrosive gases/liquids dependent on sealing material compatibility.
- Each valve type is clearly marked with type, size and performance range.
- The valves and caps are prepared for sealing, to prevent operation by unauthorised persons, using a seal wire.
- Can accept flow in both directions.
- Housing and bonnet are made from low temperature steel according to requirements of the Pressure Equipment Directive and other international classification authorities.

- Max. operating pressure:
  DSV 1 and DSV 2: 40 bar g (580 psi g)
- Temperature range:
  DSV 1 and DSV 2: -50/+100°C (-58/+212°F)
- **DSV 1** when fitted with 2 × SFA 15 or
  DSV 2 when fitted with a combination of either 2 × SFA 15, or 2 × SFV 20, or 2 × FV 25, meet the requirements according to EN13136 "Safety Valves Calculations" regarding max. 3% pressure drop in upstream line.

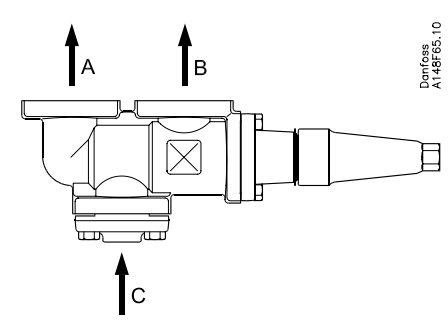
Technical data and code numbers

Technical data

- Refrigerants
  Applicable to all common non-flammable refrigerants, including R717 and non corrosive gases/liquids, dependent on sealing material compatability. Flammable hydrocarbons are not recommended. The valve is only recommended for use in closed circuits.
  - Temperature range
    –50/+100°C (–58/+212°F).
- Pressure
  The valves are designed for:
  Max. operating pressure: 40 bar g (580 psig)
  Valves for higher design pressure are available on request.
- Capacity

Type	K_v-value	C_v-value
	m^3/h	Usgal/min
DSV 1	17.5	20.3
DSV 2	30.0	34.8

- Installation
  DSV are used as changeover valves between two SFA/SFV safety valves. When the spindle is turned clockwise (fig. 1) the inlet port C is connected to B. When the spindle is turned anticlockwise (fig. 1) the inlet port C is connected to A. For further information refer to installation instruction for DSV.



Code numbers

Please note that the type codes only serve to identify the valves, some of which may not form part of the standard product range.

Type codes

Valve type		DSV inlet connection	DSV outlet connection	SFV outlet connection	Safety valve combination	Code no.
DSV	1	D25 (1 in.)	G ¾" Union	ND20 (¾ in.)	SFA15	148F3005
DSV	2	FD20 (¾ in.)	G ¾" thread flange	ND20 (¾ in.)	SFA15	148F3006
DSV	2	FD25 (1 in.)	G ¾" thread flange	ND20 (¾ in.)	SFA15	148F3007
DSV	2	FD32 (1¼ in.)	G ¾" thread flange	ND20 (¾ in.)	SFA15	148F3008

DSV	2	FD32 (1¼ in.)	G 1¼" thread flange	FD25 (1 in.)	SFV20	148F3010
DSV	2	FD32 (1¼ in.)	G 1¼" thread flange	FD32 (1¼ in.)	SFV25	148F3011
Connection fittings:	D	Weld branches DIN 2448		DSV valves are supplied c/w DSV inlet connection fittings, DSV outlet connection fittings, and SFA/SFV outlet connection fittings.		
	ND	Weld nipples DIN 2448				
	FD	Weld flanges DIN 2448				

Important!
Where products need to be certified according to specific certification societies or where higher pressures are required, the relevant information should be included at the time of order.

QDV – Quick closing oil drain valves

QDV is a quick closing oil drain valve, designed particularly for draining oil from systems containing refrigerant (ammonia) under pressure.

The valve will close immediately on release of the handle, thus protecting user and environment against unnecessary refrigerant leaks.

Advantages and features

- QDV is generaly used with R717 (ammonia) but the valve is also applicable to all other common non flammable refrigerants and non corrosive gases/liquids dependent on sealing material compatibility
- Meets the safety demands within industrial refrigeration
- Handle can be positioned 360°
- Built-in integral relief device opening over 25 bar g (proventing hydraulic pressure building up between stop valve and QDV).
- Can be supplied together with a stop valve for quick on site mounting
- Max. operating pressure: 40 bar g (580 psi g).
- Temperature range: –50/+150°C (–58/+302°F).

Technical data and code numbers

Technical data

- Refrigerants
  QDV is generally used with R717 (ammonia) but the valve is also applicable to all other common non flammable refrigerants and non corrosive gases/liquids dependent on sealing material compatibility.
- QDV is a backpressure dependent valve. If any tube or hose is mounted on the outlet of the QDV it has to be calculated to prevent blackpressure building up when relieving.
- For further information please see installation instruction for QDV.
  Flammable hydrocarbons are not recommended.
- Temperature range
  –50/+150°C (–58/+302°F).
- Pressure
  The valve is designed for:
  Maximum operating pressure of 40 bar g
  (580 psi g)

Code numbers

How to order
The table below is used to identify the valve required.

Type	Inlet	Outlet	Code no.
QDV 15 DN 15	DN 15	G ¾ in.	148H3272
QDV 15 ½ in. FPT	½ in. FPT	½ in. FPT	148H3273
QDV 15 $^{3}/_{4}$ in. FPT	¾ in. FPT	¾ in. FPT	148H3274
QDV 15 DN 15 + SVA-ST DN 15 H-WHEEL*	DN 15	G ¾ in.	148H3310
QDV 15 ½ in. FPT + SVA-ST SOC ½ in. H-WHEEL*	½ in. SOC	½ in. FPT	148H3311
Fittings for hose connection - G ¾"			148H3451
Fittings for welding connection - G ¾"			148H3452

* Two valves are supplied in one box and should be mounted on site.
The indicated inlet is for the stop valve - The indicated outlet is for the oil drain valve.

Important!
Where products need to be certified according to specific certification societies or where higher pressures are required, the relevant information should be included at the time of order.

LLG – Liquid level glasses

LLG are liquid level glasses made of ductile steel which meets the strictest requirements on industrial and marine refrigeration installations
LLG has sufficient flow areas to secure the highest possible degree of synchronous operation, and have a specially hardened reflection glass for quick reading. The LLG are delivered with stop valves, which ensures easy insulation on site as well as easy inspection and service, if any.

Advantages and features

- All LLG liquid level glasses are equipped as standard with a built-in safety system (non return device). If a glass is damaged, the pressure of the refrigerant will activate the safety system and refrigerant loss will be limited to an absolute minimum.
- Refrigerants
  Applicable to all common non flammable refrigerants including R717 and non corrosive gases/liquids dependent on sealing material compatibility.
- Temperature range
  –10/+100 °C or –50/+30 °C
- Maximum operating pressure: 25 bar g
  Equipped with boron-silicate glass, hardened by an accurately controlled heat treatment process.

- The range of liquid level glasses is based on 3 basic liquid level glasses: LLG 185, LLG 335 and LLG 740. The other standard lengths are combined by using variations of basic glass lengths.
- The liquid level glasses are offered in 4 different versions:
  - with welding nipples (LLG).
  - with stop valves equipped with caps (LLG S).
  - with sight adapter in acrylic glass ready for insulation on site (LLG F).
  - with stop valves and sight adapter in acrylic glass ready for insulation on site (LLG SF).

NOTE:
The LLG liquid level glass can only be placed in CE approved applications with the stop valves in front i.e. LLG S or LLG SF.

Technical data and code numbers

Technical data

GD – Gas Detectors

Danfoss Gas Detectors, type GD are a range of products designed to meet all industrial refrigeration and air conditioning application requirements.
GD detects a wide range of commonly used refrigerants including Ammonia, Carbon Dioxide, Halo-Carbons and Hydro-Carbons.

Advantages and features

- GD is specifically developed for refrigeration applications
- Interchangeable precalibrated sensors
- Optional models: LCD display, IP65 enclosure, EExd (Explosion Protected)
- Can operate as stand alone product
- Linear analog outputs, current (mA)/volt (V) proportional to the gas concentration
- Two digital outputs. Low Level and High Level Alarm
- Adjustable setting for alarm levels and output contacts with optional NO or NC switches
- Manual or automatic alarm reset optional
- Alarm levels can be set locally.
- GD can be connected directly to a Danfoss monitoring unit system
- Available with a range of different sensor technologies to monitor industrial refrigeration gases:
  - Electro-Chemical
  - Semi-Conductor
  - Catalytic
  - Infra-Red

EKC 102 – Temperature controller

EKC 102 controllers for panel mounting are used for temperature and defrost control via pump-down or start/stop of compressor.

Functions

Thermostat

- ON/OFF thermostat
- Sensors: Danfoss Pt1000, PTC1000 or NTC5000
- Calibration of sensors
- Day/night control
- Alarm thermostat with delays

Defrost

- Electrical or natural defrost
- Start via DI input, time interval or display
- Defrost on demand
- Stop on time or temperature

Compressor

- Anti cycle timers for optimum compressor protection
- High-effect 16A relays for connection of compressors without use of intermediate relay
- Control of 2 compressors (version 102B)

Multipurpose DI input

- Multipurpose DI input for defrost start, day/night control, dooralarm or main switch

Other functions

- The S5 sensor can be used for monitoring of condenser temperature or as product sensor (version 102B+102D)
- Door function with alarm monitoring
- Manual control of outputs
- Delay of outputs at power up

Display & Programming

- High-efficient LED display with icons for indication of operational status. Parameter settings/readouts and alarm conditions can be read on the display.
- "Copy key" programming key with room for 25 different controller setups

Fan (102D only)

- Fan delay during defrost
- Fan stop when compressor cuts out
- Fan stop at high S5 temperature

Advantages

- Integrated refrigeration-technical functions
- Defrost on demand in 1:1 systems
- Buttons and seal imbedded in the front
- IP65 density from the front panel
- Can control two compressors
- Digital input for either:
  - Door alarm
  - Defrost start
  - Start/stop of regulation
  - Night operation
  - Change-over between two temperature reference
  - Case cleaning function
- Instant programming via programming key
- HACCP

  Factory calibration that will guarantee a better measuring accuracy than stated in the standard EN 441-13 without subsequent calibration (Pt 1000 ohm sensor)

Technical data and ordering

Technical data

Supply voltage	230 V a.c.(115 V) +10/-15 %. 1.5 VA		
Sensors	Pt 1000 or PTC (1000 ohm/25 °C) or NTC-M2020 (5000 ohm/25 °C)		
Accuracy	Measuring range	-60 to +99 °C	
	Controller	±1 K below -35 °C ±0.5 K between -35 to +25 °C ±1 K above +25 °C	
	Pt 1000 sensor	±0.3 K at 0 °C ±0.005 K per grad	
Display	LED, 3 digits		
Digital inputs	Signal from contact functions Requirements to contacts: Gold plating Cable length must be max. 15 m Use auxiliary relays when the cable is longer		
Electrical connection cable	Max.1.5 mm² multi-core cable on supply and relays. Max. 1 mm² on sensors - and DI inputs. Terminals are mounted on the circuit board		
Relays*		CE (250 V a.c.)	UL ** (240 V a.c.)
	DO1. Refrigeration	10 (6) A	10 A Resistive 5FLA, 30LRA
	DO2. Alarm/ Defrost/ Refrigeration	10 (6) A	10 A Resistive 5FLA, 30LRA
	DO3. Fan	6 (3) A	6 A Resistive 3FLA, 18LRA 131 VA Pilot duty
Environments	0 to +55 °C, During operations -40 to +70 °C, During transport		
	20 - 80% Rh, not condensed		
	No shock influence/vibrations		
Enclosure	IP65 from front. Buttons and packing are imbedded in the front.		
Approvals	EU Low Voltage Directive and EMC demands re CE-marking complied with LVD tested acc. EN 60730-1 og EN 60730-2-9, A1, A2 EMC tested acc. EN50082-1 og EN 60730-2-9, A2		

* DO1 and DO2 are 16 A relays. DO3 is a 8 A relay. Max. load must be keept.
** UL-approval based on 30000 couplings

EKC 202 – Refrigeration controller

The series of EKC 202 controllers can be used for a wide range of different refrigeration applications – from control of air temperatures and defrost to more advanced applications, including control of light and fans.

Functions

Thermostat

- ON/OFF heating or cooling thermostat
- Sensors: Danfoss Pt1000, PTC1000 or NTC
- Day/night control
- Thermostat band
- Alarm thermostat with delay

Defrost

- Electrical, natural or hot gas defrost
- Start via DI input, time interval or schedule (RTC)
- Defrost on demand
- Stop on time or temperature
- Coordinated defrost

Compressor

- Anti cycle timers for optimum protection
- High-effect 16A relays for connection of compressors without use of intermediate relays

DI input

- Multi purpose DI input for defrost start, door function, night setback, main switch, appliance cleaning, general alarm, defrost coordination and thermostat band.

Fan

- Fan delay during defrost
- Fan stop when compressor cuts out
- Fan stop at high S5 temperature

Light control

- Light control of day/night, door, or via network

Advantages

- Integrated refrigeration-technical functions
- Defrost on demand in 1:1 systems
- Buttons and seal imbedded in the front
- IP65 density from the front panel
- Digital input for either:
  - Door contact function with alarm
  - Defrost start
  - Start/stop of regulation
  - Night operation
  - Change-over between two temperature reference
  - Case cleaning function
- Instant programming via programming key
- HACCP

AK-CC 210 – Universal refrigeration controller

The controller is used for evaporator control refrigeration appliances in supermarkets.
With many predefined applications one unit will offer you many options. Flexibility has been planned both for new installations and for service in the refrigeration trade.

Functions

Thermostat
- ON/OFF heating or cooling thermostat
- Sensors: Danfoss Pt1000, PTC1000 or NTC5000
- Day/night control
- Thermostat band
- Alarm thermostat with delay

Defrost
- Electrical, natural or hot gas defrost
- Start via DI input, time interval or schedule (RTC)
- Defrost on demand
- Stop on time or temperature
- Coordinated defrost

Compressor
- Anti cycle timers for optimum protection
- High-effect 16A relays for connection of compressors without use of intermediate relays

DI input
- Multi purpose DI input for defrost start, door function, night setback, main switch, appliance cleaning, general alarm, defrost coordination and thermostat band.

Fan
- Fan delay during defrost
- Fan stop when compressor cuts out
- Fan stop at high S5 temperature

Light control
- Light control of day/night, door, or via network
  Other functions
- S5 sensor can be used for monitoring of condenser temperature or as product sensor
- Door function with alarm monitoring
- Manual control of outputs
- Case cleaning function

Supplementary options
- RS 485 network card for connection to network
- Battery back-up card for real time clock
- "Copy key" programming key

Advantages

- Many applications in the same unit
- The controller has integrated refrigeration-technical functions, so that it can replace a whole collection of thermostats and timers
- Buttons and seal imbedded in the front
- Can control two compressors
- Easy to remount data communication
- Quick setup
- Two temperature references
- Digital inputs for various functions
- Clock function with backup
- HACCP (Hazard Analysis and Critical Control Points)
  - Temperature monitoring and registration of period with too high temperature
  - Factory calibration that will guarantee a better measuring accuracy than stated in the standard EN 441-13 without subsequent calibration (Pt 1000 ohm sensor)

AK-CC 350 – Universal refrigeration controller

The controller is used for evaporator control refrigeration appliances in supermarkets.
With many predefined applications one unit will offer you many options. Flexibility has been planned both for new installations and for service in the refrigeration trade.
For DIN rail mounting.

Functions

Thermostat
- ON/OFF heating or cooling thermostat
- Sensors: Danfoss Pt1000, PTC1000, NTC
- Day / night control
- Thermostat band
- Alarm thermostat with delay

Defrost
- Electrical, natural or hot gas defrost
- Start via DI input, time interval or schedule (RTC)
- Defrost on demand
- Stop on time or temperature
- Coordinated defrost

Compressor
- Anti cycle timers for optimum protection
- High-effect 20A relay for connection of compressor without use of intermediate relays

DI input
- Multi purpose DI input for defrost start, door function, night setback, main switch, appliance cleaning, general alarm, defrost coordination and thermostat band.

Fan
- Fan delay during defrost
- Fan stop when compressor cuts out
- Fan stop at high S5 temperature

Light control
- Light control of day/night, door, or via network
  Other functions
- S5 sensor can be used for monitoring of condenser temperature or as product sensor
- Door function with alarm monitoring
- Manual control of outputs
- Case cleaning function

Supplementary options
- Programming key

Advantages

- Many applications in the same unit
- The controller has integrated refrigeration-technical functions, so that it can replace a whole collection of thermostats and timers
- Buttons and seal imbedded in the front
- Can control two compressors
- Fixed MODBUS data communication
- Quick setup
- Two temperature references
- Digital inputs for various functions
- Clock function with backup
- HACCP (Hazard Analysis and Critical Control Points)
  - Temperature monitoring and registration of period with too high temperature
  - Factory calibration that will guarantee a better measuring accuracy than stated in the standard EN 441-13 without subsequent calibration (Pt 1000 ohm sensor)

AK-CC 550A – Controller for appliance control

AK-CC 550A is a complete refrigeration appliance control with great flexibility to adapt to all types of refrigeration appliances and cold storage rooms.

Functions

- Day/night thermostat with ON/OFF or modulating principle
- Product sensor S6 with separate alarm limits
- Switch between thermostat settings via digital input
- Adaptive control of superheat
- Adaptive defrosting based on evaporator performance
- Start of defrost via schedule, digital input or network
- Natural, electric or hot gas defrost
- Stop of defrost on time and/or temperature
- Coordination of defrosting among several controls
- Pulsing of fans when thermostat is satisfied
- Case cleaning function for documentation of HACCP procedure
- Rail heat control via day/night load or dew point
- Door function
- Control of two compressors
- Control of night blinds
- Light control
- Heat thermostat
- Factory calibration that will ensure a better measuring accuracy than stated in the standard EN 441-13 without subsequent calibration (Pt 1000 ohm sensor)
- Integrated MODBUS communication with the option of mounting a LonWorks or Ethernet communication card

Advantages

- Energy optimisation of the whole refrigeration appliance
- One controller for several different refrigeration appliances
- Integrated display at the front of the controller
- Quick set-up with predefined settings
- Built-in data communication
- Built-in clock function with power reserve
- Can be used on CO_2 systems

AK-CC 750 – Controller for evaporator control

- Multi evaporator controller (1-4 evaporators)
- Preset applications for electronic and thermostatic expansion valves and different defrost methods
- Full energy optimisation functions (dew point, fans, defrost, blinds etc.)
- Remote display connections (up to 4 displays)
- Flexible I/O configuration
- Easy application selection for fast configuration
- Built in RS 485 LON communication

Energy optimisation

- **Adaptive superheat via the AKV electronic expansion valve**
  Optimum utilisation of evaporator at all load conditions:
  Precondition for major energy savings via optimised suction pressure and floating condensing pressure control
- **Adaptive defrost**
  Intelligent defrost skip based on performance monitoring of evaporator
- **Dew point pulsing of rail heat**
  Pulsing of rail heat according to the actual load condition
- **Pulsing of fans**
  Pulsing of fans at thermostat cut out

Food quality/HACCP compliance

- **Modulating temperature control**
  Accurate temperature control
- **Measuring accuracy**
  Factory calibration guarantees a better measuring accuracy than required in the EN 12830 and EN 13485 standards without subsequent calibration on site (Pt 1000 ohms sensor)
- **Product temperature**
  Separate product temperature for compliance with EN 12830 and EN 13485
- **Case cleaning**
  Case cleaning function for documentation of case cleanings carried out according to HACCP procedures

Service and commissioning

- **Easy performance check**
  Provides vital info for performance check
- **Versatile controller**
  - A single controller covering several applications
  - Flexible IO configuration
  - Built-in LON communication
- **Fast and easy commissioning**
  - Preset setup for fast start-up
  - Only 5 settings required

EKC 315A – Refrigeration control

The controller and valve can be used where there are requirements to accurate control of superheat and temperature in connection with refrigeration. E.g.:

- Cold store (air coolers)
- Processing plant (water chillers)
- A/C plant

Functions

- Regulation of superheat
- Temperature control
- MOP function
- ON/OFF input for start/stop of regulation
- Input signal that can displace the superheat reference or the temperature reference
- Alarm if the set alarm limits are exceeded
- Relay output for solenoid valve
- PID regulation
- Output signal following the temperature showing in the display

Advantages

- The evaporator is charged optimally – even when there are great variations of load and suction pressure
- Energy savings – the adaptive regulation of the refrigerant injection ensures optimum utilisation of the evaporator and hence a high suction pressure
- Exact temperature control – the combination of adaptive evaporator and temperature control ensures great temperature accuracy for the media
- The superheating is regulated to the lowest possible value at the same time as the media temperature is controlled by the thermostat function

Temperature sensor Pt 1000 ohm/Pressure transmitter type AKS 32R:

EKC 347 – Liquid level controller

The controller is used for regulation of the refrigerant level in pump reservoirs, separators, intermediate coolers, economisers, condensers or receivers.
A signal transmitter (AKS 4100/4100U) will constantly measure the refrigerant liquid level in the reservoir – the controller will receive the signal and subsequently control the valve, in order to control the refrigerant liquid level according to liquid level setpoint.

Functions

- Liquid level control
- Alarm if the set alarm limits are exceeded
- Relay outputs for upper and lower level limits and for alarm level
- Analog input signal which can displace the reference
- PI control
- Low or High side control
- When AKV/A is selected, a MASTER/SLAVE system can run up to 3 AKV/A with distributed Opening Degree
- Manual control of output
- Limitation of Opening degree possible
- ON/OFF operation with hysteresis

Advantages

- Dedicated controller with easy setup for pumped refrigerant liquid systems
- With the AKS 4100/4100U liquid level transmitter it is possible to set the refrigerant level within a wide range.
- Flexible and can be used with ICM or AKV/A expansion valves ICM - ICM are direct operated motorized valves driven by digital stepper motor type ICAD AKV/A - AKVA or AKV are pulse-width modulating expansion valves.
- PC operation (extra option)
  The controller can be provided with data communication, so that it may be hooked up with other products in the ADAP-KOOL® range of refrigeration controls. Operation, monitoring and data collection can then be performed from a PC.

EKC 331T – Capacity controller

The controller is used for capacity regulation of compressors or condensers in small refrigerating systems.
Regulation can be carried out with up to four identical capacity steps.

Functions

- **Regulation**
  Regulation with up to four relay outputs can be carried out. Regulation takes place with a set reference which is compared to a signal from a pressure transmitter or a temperature sensor.
- **Relay module**
  It is possible to use the controller as relay module, so that the relays are cut in or out by means of an external voltage signal.
- **Alarmfunction**
  A relay becomes activated when the set alarm limits are exceeded.
- **Digital input**
  The digital input can be used for:
  - night operation where the suction pressure is raised
  - heat recovery where the condensing pressure is raised
  - external start/stop of the regulation.
  - Monitoring of safety circuit
- **Possibility of data communication**

Advantages

- Patented neutral zone regulation
- Sequential or cyclic operation

AK-PC 530 – Capacity controller

The controller is used for capacity regulation of compressors or condensers in small refrigerating systems.
Numbers of compressors and condensers can be connected, as required.
There are eight outputs and more can be added via an external relay module.

Functions

- Relays for compressor and condenser regulation
- Voltage output for capacity regulation of condenser
- Status inputs. An interrupted signal indicates that the safety circuit has been activated and the respective circuit stopped
- Contact inputs for indication of alarms
- Contact inputs for displacement of references or for indication of alarms
- Alarm relay
- External start/stop of regulation
- Possibility of data communication

Advantages

- Patented neutral zone regulation
- Many possible combinations for compressor constellations
- Sequential or cyclic operation
- Possibility of suction pressure optimization via the data communication

AKS 4100/4100U – Liquid level sensors

The AKS 4100/4100U liquid level sensor is designed specifically to measure liquid levels in a wide range of refrigeration applications.
The liquid level sensor is based on a proven techhology called Time Domain Reflectometry (TDR) or Guided Micro Wave.
AKS 4100/4100U liquid level sensor can be used to measure the liquid level of many different refrigerants in vessels, accumulators, receivers, standpipes, etc.

Advantages and features

- Approved and qualified by Danfoss for refrigeration applications
- One product covering several probe lengths (cable version)
- A single product for all commonly used refrigerants (cable version)
- Cable version requires less top-end clearance for installation and service
- Proven operation with all refrigerants in combination with oil
- No need to clean cable version when fully covered by oil
- The cable version is very compact and easy to handle, ship, install and use with different lengths and refrigerants
- Changes of the liquid dielectric constant (εr) do not affect operation.
- 5000 mm (197 in.) probe length with cable version
- 2-wire loop powered; no separate transformer needed
- Multi language HMI.
  Level and setting readout in mm,cm,m (ft, in.)

Technical data

Supply Voltage	14-30 V d.c. Min/Max. Value for an output of 22 mA at the terminal.	
Ambient temperature supply voltage limitations	-40°C/+80°C(–40°F / +176°F) : 16-30 V d.c. -20°C/+80°C(–4°F / +176°F) : 14-30 V d.c.	
Load	RL [Ω] ≤ ((Uext -14 V)/20 mA) – Default (Error output set to 3.6 mA) RL [Ω] ≤ ((Uext -14 V)/22 mA) – (Error output set to 22 mA)	
Cable gland	AKS 4100 PG 13, M20×1.5 ; (cable diameter: 6-8 mm (0.24-0.31in.) AKS 4100U ½ in. NPT	
Refrigerant temperature	–60°C/100°C (–76°F/212°F)	
Ambient temperature	–40°C / +80°C (–40°F / +176°F) For HMI : –20°C / +60°C (–4°F / +140°F)	
Process pressure	–1 barg / 100 barg (–14.5 psig / 1450 psig)	
Terminals (spring loaded)	0.5-1.5 mm^2 (~20-15 AWG)	
Enclosure:	IP66/67 (~NEMA type 4X)	
Mechanical connection Cable version/Coaxial version	AKS 4100:	G1 in. pipe thread. Aluminium gasket included
	AKS 4100U:	¾ in. NPT
Refrigerants	The listed refrigerants are qualified and approved by Danfoss	
	R717 / NH_3	–40°C / +50°C (–40°F / +122°F)
	R744 / CO_2	–50°C / +15°C (–58°F / +59°F)
	HCFC:	R22 –50°C / +48°C (–58°F / +118°F)
	HFC:	R404A –50°C/ +15°C (–58°F / +59°F) R410A –50°C /+15°C (–58°F / +59°F) R134a –40°C /+50°C (–40°F /+122°F)
The listed refrigerants may be used in the complete temperature range of AKS 4100/4100U, however, the accuracy may be affected if the above listed temperature range is exceeded.		
Other refrigerants within the groups of HCFC and HFC can be detected and measured if the following conditions are fulfilled:		
Reference conditions	Dielectric constant Cable version to be used in R717 / NH3, HCFC and HFC εr, liquid > 5.6	
The coaxial version is mandatory for R744 / CO_2 εr, liquid > 1.3 and marine applications.		
The coaxial version can also be used R717 / NH_3, HCFC and HFC.

AKS 4100/4100U HMI Display	084H4548

Description	Code number
AKS 4100/4100U Signal Converter **without** HMI, excluding cable gland	084H4541

* When ordering without HMI please observe:
Each AKS 4100/AKS 4100 must always be programmed via the HMI display unit.

The HMI display unit can be ordered separately and there are two possibilities:
- 084H4540 AKS 4100/4100U HMI display unit with rear cover and mounting bracket. The mounting bracket is very useful when the AKS 4100/4100U have to be programmed. The same AKS 4100/4100U HMI display unit can be used to programme more AKS 4100/4100U and both Cable and Coaxial versions.
- 084H4548 AKS 4100/4100U HMI display unit (usually spare part).

Notes

EKS/AKS – Sensors, transmitters and level controls

Danfoss can supply a wide range of sensors and transmitters for electronic control of refrigeration applications.

Temperature sensors

- The AK-HS 1000 sensor is based on a high - accuracy PT 1000 element and developed for temperature monitoring and data logging in HACCP systems. It has been designed to simulate a product placed in a refrigeration application. Hereby a realistic HACCP report is achieved.
- Temperature sensors are temperature dependent resistance sensors.
- Sensors in the AKS series are mainly for use in commercial and industrial refrigeration plants where the requirements on grade of enclosure and temperature range are high.
- The sensors are adjusted and meet the tolerance requirements of DIN IEC 751 class B.
- Sensors in the EKS series are mainly for use in air conditioning and comfort applications where there is a focus on the design of the unit and where the requirements to the temperature regulation are less demanding.
- The EKS sensors consist of a PTC element (1000 ohm at 25 °C).

Pressure transmitters

- AKS pressure transmitters are designed for precise and energy optimized control.
- The robust design makes AKS suitable for a wide range of applications, such as:
  - Air conditioning systems-Refrigeration plants
  - Process control applications
  - Laboratory applications
- Product range:
  - 4 - 20 mA (AKS 33, AKS 3000)
  - 1 - 5 V d.c.
  - 1 - 6 V d.c.
  - 0 - 10 V d.c. (AKS 32)10
  - 90% ratiometric output (AKS 32R)

Compressors

Danfoss Compressors

Constant innovation, constant progress

Throughout the last 50 years Danfoss Compressors has built a strong position as a global leader in the refrigeration and air conditioning industry. By constantly listening to the needs of our customers and the daily users of our products, we continue to develop innovative solutions that are energy-efficient and environmentally responsible.

With the most complete range of products for virtually any refrigeration or air-conditioning application, we are proud to offer solutions that are famous and trusted by customers all over the world for their reliability, efficiency and high quality.

Extensive product and application range

Our product range covers all common HC, HFC and HCFC refrigerants. Customers can choose from small, direct current hermetic compressors for mobile applications to large scroll compressors for commercial air conditioning or industrial applications.

Pushing technology further

We were the first to market with R134a. We can also cater for needs with energy optimised, including models with variable speed and monitoring as well as models developed for the solar energy industry. Proof of our constant focus on providing value through maximum efficiency, environmental safety and low noise levels.

Scroll Compressors

Danfoss scroll compressors cover a full range of capacities, perfect for any application from light commercial to large commercial systems. Available in a large variety of single and tandem models for refrigerants R407C, R134a, R410A and R22, the compressors combine high energy efficiency with low sound and minimal vibration.

Special features	Benefits	Applications
· Simple, compact and lightweight construction · Optimised scroll, motor and shell design · 100% suction gas cooled and shielded motor · Large refrigerant capacity · Large oil reserve	· Easy to install and service · Energy efficiency with long lifetime expectancy and low noise · Works in high temperature environments · Reliable operation in all conditions	· Water chillers · Self contained air conditioning units · Split systems · Central air handling units · Heat pumps · Residential air conditioning

Reciprocating Compressors (commercial)

Designed for refrigeration as well as air conditioning applications with refrigerants R22, R407C, R134a, R404A and R507A, the Danfoss Maneurop range of compressors covers all requirements in the 1.5-26 HP range. The compressors are available with rotoblock connections, suitable for parallel mounting as well as factory made units.

Special features	Benefits	Applications
· Large internal volume, large oil sump, sturdy design · 100% suction gas-cooled motor · Internal motor protection · High efficiency circular valve design	· operation under extreme conditions · versatile · no need for air circulation around the compressor · long lifetime expectancy and reliability	· Walk-in freezers & cold rooms · Frozen food processing and storage · Blast freezers · Low temperature racks · Ice cream machines · Display cabinets · Water chillers · Large packaged air conditioners

Reciprocating Compressors (household & light commercial)

Specially optimised for use in household and light commercial applications, hermetic reciprocating compressors from Danfoss provide high cooling capacity in an energy saving design. The compressor series can be used with refrigerants R134a, R290, R404A/R507A, R407C and R600a perfect for cooling needs from 20 W to 6 kW.

Special features	Benefits	Applications
· Compact construction · Durable housing · Optimised motor technology · Wide voltage range · Low GWP refrigerant · Variable speed	· Easy installation at lower cost · Low noise and high energy efficiency · Robust in tough operating conditions · Immune to unstable power supply · Environmentally friendly solutions	· Laboratory and medical equipment · Compressed air dryers · Glass door merchandisers · Display cabinets · Fridges and freezers · Ice cream cabinets · Vending machines · Drink dispensers · Ice making machines · Bottle coolers · Heat pumps · Milk cooling tanks · Wine cellars

Variable Speed Solutions for Light Commercial Refrigeration

Cut a slice out of your energy bill with variable speed control
Optimise cabinet display cooling with SLV compressors
SLV Variable Speed Drive Compressor with intelligent 220 V 50/60 Hz controller is the natural choice when you need a versatile package for a wide range of light commercial LBP applications like freezers and cabinets. You will thus secure both high food quality and a low energy bill in a single solution.
System performance monitoring with built-in data logging function, use of one, intelligent controller for control and alarm management integrated in a compact, reliable and easy to install unit – and many other important enhancements that place SLV compressors far ahead of optimised compressors.
The integrated design of the compressors helps reduce system costs, enabling of more than 30% energy reduction in supermarket and convenience store cabinets, compared to non-optimised compressors.
SLV compressors are available for R404A/R507 and the environmentally friendly refrigerant, R290.

Product advantages	Customer benefits
· Integrated variable speed and adaptive temperature control · High Temperature Stability · Wide voltage range · Uses R290 (other refrigerants possible) · Built-in data logging and failure detection · Remote monitoring option · Lower average compressor speed · Compressor, speed control, cabinet control functions, display and monitoring – all in one integrated solution	· Reduces energy consumption of more than 30% · Reduced food loss and increased food quality · High efficiency and reliability · Allows shop owners to comply with future legal refrigerant requirements now · Environmentally friendly · Enables shop owners to comply with the HACCP standard on food quality · Easy integration in existing and new monitoring systems, e.g. Retail Care® · Lower acoustic noise · Simpler installation, less room for errors, easier field service

Reciprocating Compressors (Direct current)

Tailored for cooling on the move
The excellent performance of the BD series safeguards food, medical and telecommunication. Use:
· BD35F/50F/80F compressors for 12/24V DC, R134a in mobile refrigerators and freezers
· BD220CL compressors for 12V DC, R404A LBP/MBP for bigger van cooling boxes
· BD250GH / BD350GH compressors for 12/24V DC, R134a HBP for mobile spot cooling systems
· BD250GH / BD350GH compressors for 48 V DC, R 134a HBP for telecommunication.
All the compressors are equipped with an electronic control unit with built in speed control, thermostat signal, thermal protection, safety against destructive battery discharge, electronic thermostat and fan speed control on selected.

Product advantages	Customer benefits
· Efficient and reliable · Lasting performance · Low weight · Silent operation · Ideal for solar energy supply · Compact design · Energy optimisation · Speed/capacity control · Energy optimisation, high COP	· Operation under extreme conditions · Minimal energy consumption · Portable beyond traditional limits · Low sound emission · Application possible at extreme voltage rate · Fits virtually anywhere · Safeguard for your food

Reciprocating compressors – BD Direct current

BD35F Multivoltage
R134a, -30°C, +10°C evap. temp.
All mobile applications for portable boxes, boats, trucks etc., can be powered with AC and DC, 85-265 V AC 50/60 Hz, 12-24 V DC, automatic selection of AC when available,
26-150 W cooling capacity.

BD35F with EMI Electronic
R134a, -30°C, +10°C evap. temp.
Designed for boats and trucks if risk of electric interference with radio or other electrical equipment,
26-150 W cooling capacity.

BD35F/50F/80F Basic
R134a, -30°C, +10°C evap. temp.
All mobile applications for portable boxes, boats, trucks etc.,
26-150/36-190/55-270 W cooling capacity.

*) For TLES5.7FT.3: singlepack compressor =
195B0421 (LST) if no additional connector (for run capacitor)
195B0562 (LST) if additional connector (for run capacitor)

(O) = Oil cooler
(LST) = Low Starting Torque

Test conditions (except GS)
EN 12900-CECOMAF

Condensing temperature:	55 °C
Ambient and suction gas temp.:	32 °C
Liquid temperature:	55 °C

Test condition for GS 26MFX and GS 34MFX
EN 12900-CECOMAF

Condensing temperature:	45 °C
Ambient temp.:	32 °C
Suction gas temp.:	20 °C
Liquid temperature:	45 °C

Test condition for GS 26GHX
EN 12900-CECOMAF

Condensing temperature:	50 °C
Ambient temp.:	32 °C
Suction gas temp.:	20 °C
Liquid temperature:	50 °C

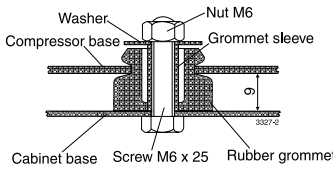
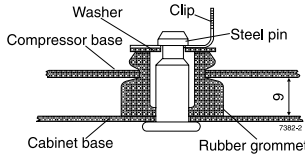
Mounting accessories



Bolt joint for
one compressor: 118-1917
in quantities: 118-1918

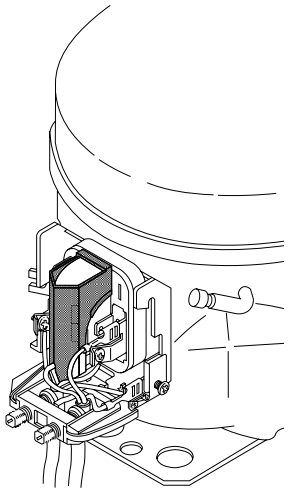
Bolt joint for
one GS compressor: 107B9150
(M8 × 40,
base plate distance:
17 mm)



Snap-on
in quantities: 118-1919

Protection Screen for PTC

Note: To fulfil the requirements of EN 60355-2-34 the protection screen 103N0476 must be applied to the PTC starting device.



Model designation

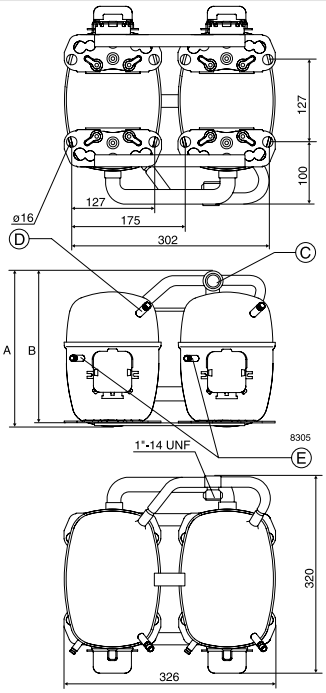
SC Twin



Accessories for SC Twin

SC10/10, SC12/12 and SC15/15:

Service valve for 12 mm tube	118-7350
Solder connector for 12 mm tube	104B0584

SC18/18 and SC21/21:

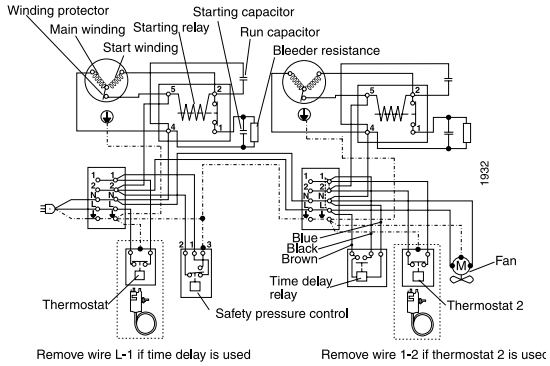
Service valve for 16 mm tube	118-7351
Solder connector for 16 mm tube	118-7405

SC10/10, SC12/12, SC15/15, SC18/18 and SC21/21:

Seal ring for service valve and solder connector	118-3638
Time-delay relay	117N0001
Check valve (to be used with time-delay relay)	020-1014

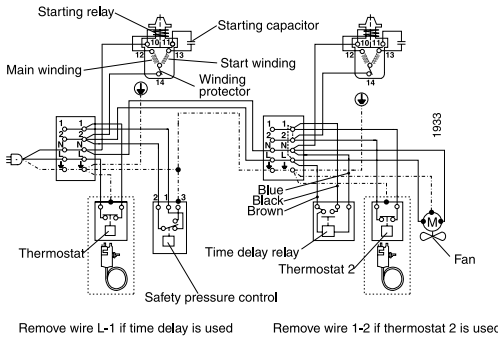
HST - CSR

SC Twin



HST - CSIR

SC Twin



Applications
LBP: Low Back Pressure
MBP: Medium Back Pressure
HBP: High Back Pressure

Motor types
RSIR: Resistant Start Induction Run
RSCR: Resistant Start Capacitor Run
CSIR: Capacitor Start Induction Run
CSR: Capacitor Start Run

Starting devices
LST: Low Starting Torque
LST is used with capillary tube control and pressure equalizing. (Pressure equalizing may exceed 10 minutes). The PTC starting device requires 5 minutes cooling before each start.
HST: High Starting Torque
HST consisting of relay and starting capacitor, is used for expansion valve control or for capillary tube control without pressure equalizing.

Test conditions EN 12900 (CECOMAF)

Nomenclature

Type	Size	Motor	Features
HRH	**036**	**U1L**	**P6**

Application:
H: high temperature / air conditioning

Family:
C: light commercial scroll
R: residential scroll (new platform)
L: light commercial scroll (new platform)

Refrigerant & lubricant:
M: R22/R417A, alkylbenzene lubricant*
P: R407C, PVE lubricant
H: R410A, PVE lubricant
J: R410A, PVE lubricant

Nominal capacity:
In thousand Btu/h at 60 Hz,
ARI conditions

Model variation
T: design optimized for 7.2/54.4°C
U: design optimized for 7.2/37.8°C

Other features

	Oil sight glass	Oil equalisation	Oil drain	LP gauge port	Gas equalisation port
6	None	None	None	None	None
7	Threaded	None	None	None	None
8	None	Brazed	None	None	Brazed

Tubing and electrical connections
P: brazed connections, spade terminals
C: brazed connections, screw terminals

Motor protection
L: internal motor protection

Motor voltage code
1: 208-230 V/1~/60 Hz
2: 200-220 V/3~/50Hz & 208-230 V/3~/60 Hz
4: 380-400 V/3~/50 Hz & 460 V/3~/60 Hz
5: 220-240 V/1~/50 Hz
7: 500 V/3~/50 Hz & 575 V/ 3~/60 Hz
9: 380 V/3~/60 Hz

* When H*M compressors are used with R417A, the factory charged oil must be replaced by PVE oil 320HV (120Z5034)

● Factory built tandems
○ Tandems to be achieved by assembly of individual compressors. Specific outline drawings of tandems, trio and quadro units are available, refer to FRCC.PC.005.

To: Evaporating temperature in °C
Tc: Condensing temperature in °C

Qo: Cooling capacity in W
Pe: Power input in kW

Superheat = 11.1 K
Subcooling = 8.3 K

Voltage: 400 V / 3 / 50 Hz

Nomenclature

Type	Size	Motor	Features
MLZ	021	T4L	P9

Application
M: medium temperature refrigeration

Family, Refrigerant & lubricant
LZ: R404A - R507 - R134a - R22, PVE lubricant

Nominal capacity
In thousand Btu/h at 60 Hz,
ARI, MBP conditions

Model variation
T: design optimised for refrigeration

Other features

	Oil sight glass	Oil equalisation	Oil drain	LP gauge port	Gas equalisation port
9	Threaded	None	Schrader	None	None

Tubing and electrical connections
P: brazed connections, spade terminals
C: brazed connections, screw terminals

Motor protection
L: internal motor protection

Motor voltage code
1: 208-230V/1~/60 Hz
2: 200-220V/3~/50 Hz & 208-230V/3~/60 Hz
4: 380-400V/3~/50 Hz & 460V/3~/60 Hz
5: 220-240V/1~/50 Hz
7: 500V/3~/50 Hz & 575V/ 3~/60 Hz
9: 380V/3~/60 Hz

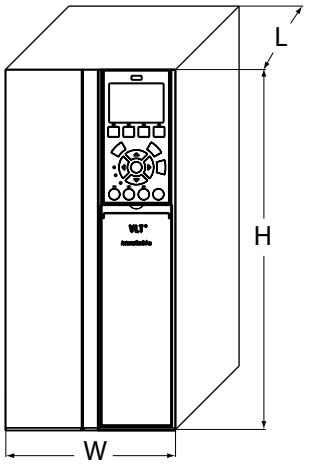
Code numbers for ordering single pack compressors and frequency converters

Compressor		Frequency converter				
Model	Code No.	Model & power	IP class	RFI class*	LCP**	Code No.
VTZ038-G	120B0001	CD302 4.0 kW	IP20	H1	yes	131B3543
			IP55	H1	yes	131B3547
VTZ054-G	120B0002	CD302 5.5 kW	IP20	H1	yes	131B3552
			IP55	H1	yes	131B3556
VTZ086-G	120B0003	CD302 7.5 kW	IP20	H1	yes	131B3560
			IP55	H1	yes	131B3564
VTZ121-G	120B0004	CD302 11.0 kW	IP21	H1	yes	131B3568
			IP55	H1	yes	131B3572
VTZ171-G	120B0005	CD302 15.0 kW	IP21	H1	yes	131B3576
			IP55	H1	yes	131B3580
VTZ215-G	120B0006	CD302 18.5 kW	IP21	H1	yes	131B3584
			IP55	H1	yes	131B3588
VTZ242-G	120B0007	CD302 22.0 kW	IP21	H1	yes	131B3592
			IP55	H1	yes	131B3596



Listed code numbers are for compressors with voltage code G and frequency converters with supply voltage code T4 (380-400 V/3ph/50-60Hz). VTZ038 to VTZ121 are available with voltage code J (200-240V/3ph/50-60Hz) on request.
* RFI class H2 available on request
** Models without LCP available on request

Danfoss CO_2 product range

Product Grouping	Product	Product Description
Transcritical Expansion Valves	CCMT	Electrically operated high pressure expansion valve
	ICMTS	Motorized transcritical control valves
Pressure Regulating & Gas-Bypass Valves	ICS with CVP-HP/XP	Mechanical backpressure regulators
	CCM	Standstill capable electronic backpressure regulators
Electronic Expansion Valves	AKVH	Standstill capable pulse width modulating expansion valves
	AKV	Pulse width modulating expansion valves
	AKVA	Industrial pulse width modulating expansion valves
	ICM	Industrial motorized expansion valves
	CCM	Standstill capable motorized expansion valves
Valve Stations	ICF	Industrial valve stations
Solenoid Valves	EVR 2-8	Small solenoids
	EVRH 10-40	Large solenoids
	EVRS	Industrial solenoids
	EVRST	Industrial solenoids capable of opening at 0 differential
	ICS + EVM	Industrial solenoid valves for large capacities
Line Components	SVA-S and SVA-L	Industrial stop valves
	SCA-X and CHV-X	Industrial stop/check and check valves
	SNV-ST and SVA-SS	Industrial stop needle valves
	GBC for CO_2	Ball valves
	NRV	Check valves
	SG	Sight glasses - inline and socket versions
	DCRH	Exchangeable core filter driers
	DML	Filter driers
	DMT	Transcritical oil and refrigerant driers
	FIA	Filters
Regulating Valves	REG-SA and REG-SB	Regulating valves for pump recirculated systems
Liquid Level Controls	AKS 4100	Liquid Level Sensors
	EKC 347	PI controllers
Safety valves	SFA 15	Safety relief valves
	DSV	Industrial double safety relief valve manifolds
Pressure Switches	RT	Differential pressure switches
	MBS 5000	Transcritical pressure switches
	KP 6	Pressure switches
Pressure Sensors	AKS 2050	Radiometric transcritical pressure transmitters
	AKS 32	Pressure transmitters (0-5V signal)
	AKS 32R	Radiometric pressure transmitters
	AKS 33	Pressure transmitters (4-20mA signal)
Temperature Sensors	AKS 11	Suction side sensor
	AKS 21A	Discharge side sensor
Gas Detection	GD	Gas detectors
Electronic HP Controls	EKC326A	Controllers for transcritical operation and gas bypass
Electronic Evaporator Controllers	AK CC 450	CO_2 "brine" case controllers
	AK CC 550	Single case controllers
	AK CC 750	Multi-case controllers
Cascade HX controller	EKC 313	CO_2/CO_2 cascade heat exchanger controllers
	EKC 316A	X-refrigerant/CO_2 expansion valve controllers
Pack Controllers	AK PC 740	Pack controllers (up to 4 compressors)
	AK PC 780	Pack controllers (up to 8 compressors)
	XM 205A	8 analog input/ 8 output relay extension module
System Manager	AK SC 255	CO_2 supermarket system manager
Service Tool	MIMIC	Graphical system monitoring software
	AKM	Service technician software

Use of flammable refrigerants such as hydrocarbons

The use of low GWP flammable refrigerants is increasing so flammable refrigerants, whether natural or chemical substances, are now used at an increasing rate in general refrigeration applications globally.
The increasing use of hydrocarbons means that refrigeration contractors and service technicians without prior experience of flammable refrigerants are now starting to work with these substances. There is therefore an increased risk of hazardous situations and to limit the risks for customers and end-users, Danfoss requires a formal agreement to be signed when our customers buy products applicable for flammable refrigerants in non-industrial refrigeration applications.

The agreement works as a guide. It builds on the most important international standards to improve safety.

The main points include:
- Follow the relevant norms and legislation.
- Ensure that only competent people are working with flammable refrigerants, including technicians servicing the refrigeration system.
- Have business liability insurance.
- Where Danfoss products are used, only components and spare parts approved for flammable refrigerants shall be used.

Refrigeration Controls

Thermostatic expansion valves type TUBE and TUCE
- Bi-flow function.
- Capacities up to 20 kW.
- Max. working pressure 34 bar.
- Stainless steel, hermetically tight solde version.
- Bimetal connections for fast and safe soldering.
- Connections 1/4" and 3/8" inlet, 1/2" outlet.
- External pressure pressure equalization
- Adjustable superheat type (TUBE) available for laboratory use.

Expansion valves type TGE
- Bi-flow with expansion in both directions.
- Capacities up to 130 kW
- Head pressure independent.
- Balance port (BP).
- Max. working pressure 46 bar.
- Cylindrical bulb design, with new bulb strap.
- Inlet in 5/8" or 7/8", outlet 7/8".
- External pressure equalization.
- Adjustable superheat setting.

Solenoid valve type EVR
- Direct or servo operated solenoid valve especially designed for liquid, suction, and hot gas lines.
- Media temperatures up to 105 °C.
- Solder connections up to 7/8 in.
- Extended ends for soldering make installation easy. It is not necessary to dismantle the valve when soldering.
- Wide choise of coils for a.c. and d.c.
- Fast and safe mounting of "Clip-on"-coil.
- MOPD up to 25 bar with 14 W coil.

Shut-off valve type BML
- Manual shut-off valve for installation in liquid, suction and hot gas lines.
- Connections size up to 22mm (7/8") ODF.
- Capacities (K_v) 0.3 -2.9 m3/h.

Check valves type NRV and NRVH
- Non-return valves for liquid, hot-gas and suction lines.
- NRVH with stronger spring to avoid resonance problems with compressors connected in parallel.
- Connections size up to 22 mm (7/8") ODF.
- Capacities (K_v) 0.56 -5.5 m3/h.

Filter driers type DCL and DML
- Protects refrigeration and air-conditioning systems from moisture, acids and solid particles.
- Connections size up to 22 mm (7/8") ODF.
- Capacities up to 100 kW.

Sight glasses type SGI and SGN
- Sight glasses for monitoring condition and moisture content of refrigerant and the flow in oil return lines.
- SGI for R290, R600 and R600a, and SGN for R1270.
- Connections size up to 22mm (7/8") ODF.

Thermostat type RT
- 2 m capillary tubes.
- Range -5°C to 30°C.
- High temperature versions available up to 250°C.

Pressure control type RT
- Connection G 3/8A + welded nipple ∅6.5/10 mm.
- Range RT 5E: 4 to 17 bar.
- Regulating ranges available from -0.8 bar as minimum up to 30 bar as maximum.

Electronic Refrigeration Controller type ERC
- Manages all energy consuming parts in the refrigeration appliance
- Designed to cut energy consumption
- IP rated body for high moisture resistance
- Internationally approved hardware (CE, UL, GOST, and many more)
- For use in all climates, indoors as well as outdoors.
- IECEx approved for use with hydrocarbon refrigerants
- Can be used on all light commercial applications.

Pressure controls type KP
- Protects against excessively low suction or high discharge pressure.
- The high pressure controls are equipped with failsafe double bellows, and low pressure controls with reduced bellow travel to enhance life time
- Manual and automatic reset available
- Regulating ranges -0.2 to 7.5 bar and 8 to 32 bar.
- Connection ¼" ODF.

Differential pressure control type RT 260 AE and RT 262 AE
- Connection G 3/8A + welded nipple ∅6.5/10 mm.
- Regulating range 0.1 to 4 bar.

Differential pressure controls type MP 55E
- Protects refrigeration compressors against low lubricating oil pressure.
- Wide regulating range (ΔP 0.3 to 4.5 bar).
- Connections ¼" ODF.

Compressors and Condensing Units for R290

Running with R290 for light commercial refrigeration in LMBP applications

- Such as bottle coolers and vending machines, water and beer coolers, display freezers, food and delicatessen
- Small dimensions make compact cabinets
- Low sound emission
- Reduced installation and running costs

Fix speed Compressors and Condensing Units range

- Available in T, N, SC platforms (3-21 cm^3)
- Application at high ambient temperature possible
- High appliance and system robustness at rough operating conditions
- Insensitive towards unstable electric power supply
- Prewired and ready to braze Condensing Units

Variable Speed SLV15CNK.2 Compressor and Controller

- Variable speed 2000 – 4000 rpm, with permanent magnet motor
- Intelligent controller for whole appliance will save up to 40% energy
- Monitor system performance, intelligent controller for ultimate control and alarm management, HACCP compliance easy
- Built-in data logging function allows food quality and safety
- Protection: current, speed, temperature; electronic thermostat

Direct Current Compressors for R290 and R600a

BD running with R290 or R600a for stationary LMBP applications, freezers and solar powered systems

- Such as ice cream freezers and boxes, pharmaceutical applications up to 200 litres
- 10-45 V and 12-24 V DC
- Electronic control unit with built-in speed control, thermostats signal, thermal protection, safety against destructive battery discharge, electronic thermostat and fan speed control on selected models

The Danfoss product range for the refrigeration and air conditioning industry

Danfoss Refrigeration & Air Conditioning is a worldwide manufacturer with a leading position in industrial, commercial and supermarket refrigeration as well as air conditioning and climate solutions.

We focus on our core business of making quality products, components and systems that enhance performance and reduce total life cycle costs – the key to major savings.

We offer a single source for one of the widest ranges of innovative refrigeration and air conditioning components and systems in the world. And, we back technical solutions with business solutions to help your company reduce costs, streamline processes and achieve your business goals.
