CONTROLS, FIELD DEVICES AND COMMERCIAL REFRIGERATION PRODUCTS

Johnson Controls is a global diversified technology and multi industrial leader serving a wide range of customers in more than 150 countries.

Our 120,000 employees create intelligent buildings, efficient energy solutions, integrated infrastructure and next generation transportation systems that work seamlessly together to deliver on the promise of smart cities and communities. Our commitment to sustainability dates back to our roots in 1885, with the invention of the first electric room thermostat. We are committed to helping our customers win and creating greater value for all of our stakeholders through strategic focus on our buildings and energy growth platforms.

ACTUATORS

TERMINAL UNIT VALVE ACTUATORS

VA-7080

THERMAL ON/OFF CONTROL

The VA-7080 Terminal Unit Valve Actuators series provide ON/OFF and DAT control in HVAC application.

The compact design of these actuators make them suitable for installations in confined spaces, such as fan-coil applications.

The VA-7080 Actuators are designed for field mounting onto all Johnson Controls Terminal Unit Valves: VG3000, VP1000 (see pertinent Product Bulletins).

FEATURES

- 24 VAC/DC and 230 VAC power supply
- ON/OFF or DAT controls
- NC version (stem retracts when energized)
- NO version (stem extends when energized)
- Easy mounting solution
- Factory mounted cable 1.5 m
- Models with auxiliary switch

ACTUATORS AND VALVES

ACTUATORS

TERMINAL UNIT VALVE ACTUATORS

VA-7090

THERMAL 0...10 V CONTROL

The VA-709x Series Terminal Unit Valve Actuators provides Proportional Control in HVAC application.

The compact design of these actuators make them suitable for installations in confined spaces, such as fan-coil applications. The VA-709x Actuators are designed for field mounting onto all Johnson Controls terminal unit valves: VG3000 and VP1000 (see *pertinent bulletins*).

Moreover, thanks to an innovative fixing system, the VA-709x is suitable for almost all the terminal unit valves in the market.

FEATURES

- 24 VAC power supply
- 0...10 V control signal
- NC version (stem retracts when energised)
- NO version (stem extends when energized)
- Easy mounting solution
- Factory mounted cable 2 m

ACTUATORS

TERMINAL UNIT VALVE ACTUATORS

VA-7480

MOTORIZED FLOATING AND PROPORTIONAL CONTROL

The VA-748x series provides Floating, Proportional or Proportional control with 0-10 V position feedback signal in HVAC applications. The compact design of this actuator makes it suitable for installation in confined spaces, such as fan coil, chilled ceiling, manifolds, etc.

The VA-748x series actuator is designed for field mounting onto VG3000 and VP1000 terminal unit valves (*see pertinent bulletin*).

Due to the innovative concept of different strokes setting the VA-748x can be installed over most of the terminal unit valve in the market.

FEATURES

- 24 VAC/VDC and 230 VAC power supply
- Floating and Proportional control
- Threaded nut M28x1.5 and M30x1.5
- Auto stroke detection
- Configurable stroke
- Configurable to direct and reverse action
- Configurable analog inputs
- Max mechanical stroke 6.3 mm
- Feedback Control

ACTUATORS AND VALVES

ACTUATORS

NON-SPRING RETURN PLANT VALVE ACTUATORS

VA-7150

FLOATING AND PROPORTIONAL CONTROL

The VA-7150 series Synchronous Motor Driven Actuator provides Floating or Proportional control of valves with up to 19 mm stroke in heating, ventilation and air conditioning applications.

This compact, Non-Spring Return Actuator has 500 N nominal thrust and responds to a variety of input signals. The VA-7150 series can be easily installed on site or ordered pre-fitted to VG7000 and VGS800 valve series in accordance with the specified maximum close-off pressure ratings.

FEATURES

- 500 N force output in a compact unit
- Magnetic clutch
- Unique Yoke design
- Coupler for simple Actuator attachment to Flanged Valves
- Positioner with adjustable starting point and span, reverse and direct action modes
- "Signal fail" safe position

DIMENSIONS (in mm)

ACTUATORS AND VALVES

ACTUATORS

NON-SPRING RETURN PLANT VALVE ACTUATORS

VA-7200

FLOATING AND PROPORTIONAL CONTROL

The VA-720x Series Synchronous Motor Driven Actuator provides Floating or Proportional control of valves, with up to 19 mm stroke in heating, ventilation and air conditioning applications.

This compact Non-Spring Return Actuator has a 1000N nominal force and responds to a variety of input signals.

The VA-7200 series can be easily field mounted or ordered factory coupled to VG7000 series valves in accordance with the specified maximum close-off pressure ratings.

FEATURES

- 1000N force output compact unit
- Magnetic clutch
- Signal fail "safe position"

VA-7700

FLOATING AND PROPORTIONAL CONTROL

The VA-7700 series provides Floating and Proportional control and can be mounted onto VG7000, VGS800 and VG9000 valves.

FEATURES

- 24 VAC and 230 VAC power supply
- Floating and proportional control
- Manual override
- LED operating status display
- Self calibrating
- IP54 enclosive protection

ACTUATORS

NON-SPRING RETURN PLANT VALVE ACTUATORS

VA7810

FLOATING AND PROPORTIONAL CONTROL

The VA7810 Non Spring Return Actuator with 1000 N thrust for valves in heating, ventilation and air conditioning applications is available for Floating or Proportional control.

All models have manual override as standard and provide stroke capabilities of 7 mm to 25 mm. Proportional models are self-calibrating.

The actuator is intended for use with Johnson Controls VG7000 and VGS800 threaded valves as well as VG8000 and VG9000 flanged valves. All valves should be fitted in accordance with the maximum close-off pressure ratings specified.

Valve/actuators can be ordered as separate units or as a factory fitted valve/actuator combinations.

FEATURES

- Proportional Actuators are self calibrating
- All models can also be used as floating and ON/OFF Actuators
- Force controlled motor shut-off
- Manual override as standard
- IP54 enclosure protection
- Delivered with fitted 1.5 m cable and wire terminals
- Status LED
- Models with optional aux. switches or 2 k Ω feedback potentiometer
- Control-Signal failure – stem to pre-determined position
- Stroke position indicator

VA1125

FLOATING AND PROPORTIONAL CONTROL

The VA1125 Valve Actuators are used to control Valves in HVAC systems. They are of modular construction so that the required type of control signal is achieved simply by fitting a module with the required function in-situ. It can be mounted onto VG8000, VG8300 and VG9000 series valves.

FEATURES

- 24 VAC and 230 VAC power supply
- Floating and Proportional control
- Manual override
- Automatic stem coupling
- Actuator fixed to valve with one ring nut
- Self adjusting, automatic stroke adjustment, calibrated pressure control at the end positions
- 2 auxiliary switches, feedback potentiometer and split range unit available
- IP66
- Selectable characteristic curve
- Selectable running time

RA-3000

FLOATING AND PROPORTIONAL CONTROL

The RA-3000 Series Synchronous Motor-Driven Reversible Actuators are available for floating or with electric positioner for 0...10 V control.

They feature factory calibrated pressure switches to provide specified close-off ratings.

These actuators are available in three sizes with 1600 N, 1800 N and with 3000 N nominal force and can be used with VG8000 and VG9000 series valves according to maximum close-off pressure ratings specified. Factory fitted options, such as 2kOhm feedback potentiometer, auxiliary switches and hand crank are available.

FEATURES

- Uses synchronous motor with pressure switches
- Special clamp coupler quick-fit systems
- Models for floating and proportional 0...10 VDC control
- Positioner with adjustable starting point, span, and direct/reverse action
- Active 0...10 VDC position feedback on proportional models
- Optional auxiliary switches and feedback potentiometer available
- Optional hand crank

VA9104

4 Nm, ON/OFF, FLOATING AND PROPORTIONAL CONTROL
ROTARY ACTUATORS FOR BALL VALVES

The Electric Actuator Series have been developed for operation of ball valves.

These synchronous, motor driven actuators are used to provide accurate positioning on VG1000 series DN15, DN20 and DN25 Ball Valves.

FEATURES

- ON/OFF, Floating with timeout and Proportional control
- Load-independent running time
- Up to 5 Actuators in parallel operation possible
- Manual release button
- 1.2 m PVC cable
- Selectable direction of rotation
- Automatic shut-off at end position

ACTUATORS

NON-SPRING RETURN PLANT VALVE ACTUATORS

VA-9070

68 - 2030 Nm, ON/OFF, FLOATING AND PROPORTIONAL
CONTROL ROTARY ACTUATORS FOR BUTTERFLY VALVES

The Actuator is specially developed for use with VFB Butterfly Valves in the HVAC industry. These bidirectional actuators are direct mounted on VFB Valves without any linkage. A single VA-9070 provides 68, 226, 339, 565, 734, 1470, 2030 Nm torque depending on the model.

With a power supply of 24 VAC or 230 VAC the actuators can be controlled in ON/OFF, Floating or Proportional configuration. Two isolated auxiliary switches and an electrical heater are standard in these series. The protection class is IP65 to ensure a dust-proof and shower-proof from all angles.

An hand operation is standard. When hand operation is active, a yellow ring is displayed and the actuator motor is not operative. The position indicator is clearly recognizable all around.

The opening and closing speed is independently adjustable in the proportional application.

FEATURES

- Exact positioning ensures precise flow control
- Complete opening and closing from 100% to 0
- Range from 68 Nm to 2030 Nm
- Self-regulating heater as standard
- Construction optimized for operation with butterfly valves
- Two isolated auxiliary switches as standard

ACTUATORS

NON-SPRING RETURN PLANT VALVE ACTUATORS

VAP1000-VAP3000

VAP LINEAR ACTUATORS FOR VPA PRESSURE INDEPENDENT
FLANGED VALVES

The VAP Actuators have been specifically designed to drive the VPA Pressure Independent Valve.

They provide 1000 N or 3000 N according with the valve dimensions.

The actuators are used to control the valve and to set the maximum desired flow.

FEATURES

- Linear actuator with high control accuracy provides the equal percentage flow curve
- Actuator has manual function that allows for manual positioning of the Valve
- The potentiometer on the actuator is use to set the maximun flow of the VPA Valve
- They provide 1000 N or 3000 N according with the valve dimensions.
- In the VAP300-24-C model, a led display gives several function information
- 0-10 VDC or 4-20 mA setpoint and feedback

FA-2000

FLOATING AND PROPORTIONAL CONTROL

The FA-2000 Series Electric Actuators are available for floating or with electronic positioner for 0...10 V or 0...20 mA control.

It provides a fully variable valve aperture, a power failure spring return safety mechanism and an electrically operated manual override.

Three models of the FA-2000 are available.

The FA-22 ("failsafe" position down = stem fully extended) and FA-25 ("failsafe" position up = stem fully retracted): this model pair has a 25 mm stroke and a minimum of 2400 N thrust.

The FA-23 ("failsafe" position down) and FA-26 ("failsafe" position up): this model pair has a 42 mm stroke of and a minimum thrust of 2200 N.

The actuator can be combined with VG8000 series in accordance with the maximum close-off pressure ratings specified.

The FA-2000, when delivered as a single unit, is pre-set to facilitate installation with minimum adjustment; it is also available with a variety of options such as auxiliary switches and feedback potentiometers.

FEATURES

- Power failure mechanism (Spring Return)
- Visible calibration ring on stem coupling
- Positioner with adjustable starting point, span and direct/reverse action
- Electrically operated manual override
- Quick-fit coupling clamp

ACTUATORS

SPRING RETURN PLANT VALVE ACTUATORS

VA9203

3 Nm, ON/OFF, FLOATING AND PROPORTIONAL CONTROL
ROTARY ACTUATORS FOR BALL VALVES

The VA9203 Series Electric Spring Return Actuators are direct-mount actuators.

These bidirectional actuators are used to provide accurate positioning on Johnson Controls® VG1000 Series DN15 up to DN25 Ball Valves in Heating, Ventilating and Air Conditioning (HVAC) applications.

One Integral line voltage auxiliary switch, available only on the VA9203-xxB-1(Z) models, indicate end-stop position, or perform switching functions within the selected rotation range.

A graduated scale from 0% to 100% and a position indicator provide visual indication of the valve's opening.

When power fails during service, the mechanical spring return system open or close the valve ports.

The series includes the following control options:

- ON/OFF, 24 VAC/DC, 100 to 240 VAC power
- ON/OFF and floating point, 24 VAC/DC power
- Proportional, 24 VAC/DC power, for 0(2) to 10 VDC or 0(4) to 20 mA control

FEATURES

- 3 Nm rated torque
- Mechanical Spring Return System
- Direct-coupled design
- Reversible mounting
- Rugged IP54 rated enclosure
- Electronic stall detection
- Double-insulated construction
- Microprocessor controlled brushless DC Motor (-AGx and -GGx models)
- External mode selection switch (-AGx and -GGx models)
- Integral cables with colored and numbered conductors
- Optional integrated auxiliary switch
- Override control (proportional models only)
- UL, CE, and C-Tick Compliance
- Manufacturing under International Standards Organization (ISO) 9001 Quality Control Standards

SPRING RETURN PLANT VALVE ACTUATORS

VA9208

8 Nm, ON/OFF, FLOATING AND PROPORTIONAL CONTROL
ROTARY ACTUATORS FOR BALL VALVES

The VA9208 Series Electric Spring Return Actuators are direct-mount actuators.

These bidirectional actuators are used to provide accurate positioning on Johnson Controls® VG1000 Series DN32 up to DN50 Ball Valves in Heating, Ventilating and Air Conditioning (HVAC) applications.

Two integral line voltage auxiliary switches are available only on the VA9208-xxC-1 models, indicate end-stop position, or perform switching functions within the selected rotation range.

A graduated scale from 0% to 100% and a position indicator provide visual indication of the valve's opening.

When power fails during service, the mechanical spring return system open or close the valve ports.

The series includes the following control options:

- ON/OFF, 24 V AC/DC, 230 V AC power
- ON/OFF and floating control, 24 V AC/DC power
- Proportional, 24 V AC/DC power, for 0(2) to 10 VDC or 0(4) to 20 mA control

FEATURES

- 8 Nm rated torque
- Mechanical Spring Return System
- Direct-coupled design
- Reversible mounting
- Rugged IP54 rated enclosure
- Electronic stall detection
- Double-insulated construction
- Microprocessor controlled brushless DC motor (-AGx and -GGx models)
- External mode selection switch (-AGx and -GGx models)
- Integral cables with colored and numbered conductors
- Optional integrated auxiliary switches
- UL, CE, and C-Tick Compliance
- Manufacturing under International Standards Organization (ISO) 9001 Quality Control Standards

NON-SPRING RETURN DAMPER ACTUATORS

M9102-M9104

2 AND 4 Nm, ON/OFF, FLOATING AND PROPORTIONAL CONTROL

The small family Electric Damper Actuator Series have been developed to operate small air dampers in Ventilation and Air Conditioning Systems. The compact design make this actuator highly versatile.

FEATURES

- Floating, ON/OFF and Proportional control
- Load-independent running time
- Up to 5 Actuators in parallel operation possible
- Actuators available with PVC cable or with plug-in terminal block connection
- Simple direct mounting with universal adapter for fitting to \varnothing 8...13 mm or with 8...10 mm square shaft. 45 mm minimum shaft length
- Selectable direction of rotation
- Manual release button

NON-SPRING RETURN DAMPER ACTUATORS

M9304

4 Nm, ON/OFF, FLOATING AND PROPORTIONAL CONTROL

The Silence Electric Damper Actuator Series have been developed to operate small and medium air dampers in Ventilation and Air Conditioning Systems.

The compact design and universal adapter fitted with limitation of rotation angle make this actuator highly versatile.

A key feature of the design is the Johnson Controls® stem adapter which also incorporates angle-of-rotation limiting and position indication.

FEATURES

- ON/OFF, Floating and Proportional control
- Load-independent running time
- Up to 5 actuators in parallel operation possible
- Plug-in terminal block connection
- Simple direct mounting with universal adapter for fitting to Ø 6 mm to 16 mm shaft or with M9000-ZxxDN adapter kit for 8, 10, 11 and 12 mm square shaft. 45 mm min shaft length
- Selectable direction of rotation
- Limitation of rotation angle
- Manual release button
- 2 adjustable auxiliary switches
- Automatic shut-off at end position (overload switch)
- Energy saving at end positions
- Actuators available with 1 m halogen-free cable

ACTUATORS

NON-SPRING RETURN DAMPER ACTUATORS

M9300

8, 10, 20 AND 35 Nm, ON/OFF, FLOATING AND
PROPORTIONAL CONTROL

The M9300 Series Electric Non-Spring Return Actuators provide control of dampers in HVAC Systems with 8, 10, 20 and 35 Nm rated torque.

These bidirectional actuators do not require a damper linkage and are easily installed on round shafts or square shafts. An optional line voltage auxiliary switch kits can be field installed to indicate an end-stop position or perform switching functions within the selected rotation range.

FEATURES

- Automatic signal input detection model: ON/OFF, Floating and Proportional
- High speed actuator model
- Optional auxiliary switch and potentiometer feedback
- 8, 10, 20 and 35 Nm rated torque
- Self-calibrating to adjust stroke
- Electronic stall detection
- Microprocessor-controlled Brushless DC motor

ACTUATORS

NON-SPRING RETURN DAMPER ACTUATORS

M9100

8, 16, 24 AND 32 Nm, ON/OFF, FLOATING AND PROPORTIONAL CONTROL

The M9100 Series Electric Actuators are direct-mount Actuators.

These bidirectional actuators do not require a damper linkage, and are easily installed on round shafts or square shafts using the standard shaft clamp included with the actuator.

A single M9100 series electric non spring return actuator provides 8, 16, 24 or 32 Nm torque depending on the model.

Two integral line voltage auxiliary switches, available only on the M91xx-xxC models, indicate end stop position or performs switching functions within the selected rotation range.

M9100 series actuators provide 90° of rotation. A graduated scale from 0° to 90° and a position indicator provide visual indication of stroke.

FEATURES

- Direct-coupled design
- Selectable direction of rotation
- Electronic stall detection
- Double-insulated construction
- Load independent
- Optional integrated auxiliary switches
- Manufactured under International Standards Organization (ISO) 9001 Quality Control Standards

ACTUATORS AND VALVES

ACTUATORS

SPRING RETURN DAMPER ACTUATORS

M9203

3 Nm, ON/OFF, FLOATING AND PROPORTIONAL CONTROL

The M9203 Series Electric Spring Return Actuators are direct-mount Actuators.

These bidirectional actuators do not require a damper linkage, and are easily installed on round shafts or square shafts using the standard shaft clamp included with the actuator.

A single M9203 series electric spring return actuator provides 3 Nm running and spring return torque.

An integral line voltage auxiliary switch, available only on the M9203-xxB-1(Z) models, indicates end stop position, or performs switching functions within the selected rotation range.

M9203 Series Actuators provide 95° of rotation. A graduated scale from -5° to 90° and a position indicator provide visual indication of stroke.

When power fails during service, the mechanical spring return system provides rated torque to the connected equipment, returning it to the home position.

The series includes the following control options:

- ON/OFF, 24 V, 100 to 240 VAC power
- ON/OFF and floating point, 24 V power
- Proportional, 24 V power, for 0(2) to 10 VDC or 0(4) to 20 mA control signal

FEATURES

- 3 Nm rated torque
- Direct-coupled design
- Reversible mounting
- Electronic stall detection
- Double-insulated construction
- Microprocessor-controlled brushless DC motor (-AGx and GGx types)
- External mode selection switch (-AGx and -GGx types)
- Integral cables with colored and numbered conductors
- Optional Integrated Auxiliary Switch
- Override control (proportional models only)
- Manufactured under International Standards Organization (ISO) 9001 Quality Control Standards

ACTUATORS

SPRING RETURN DAMPER ACTUATORS

M9208

8 Nm, ON/OFF, FLOATING AND PROPORTIONAL CONTROL

The Spring Return Electric Damper-Actuator series has been specially developed for the motorized operation of air dampers in Air Conditioning Systems.

When the control signal is applied the actuator drives the damper to the operational position, while evenly tensioning the integrated spring.

After a power failure the stored energy in the spring immediately brings the damper to the safety position.

Manual operation is automatically cancelled when the actuator is in electrical operation.

The compact design and universal adapter fitted with limitation of rotation angle make this actuator highly versatile.

FEATURES

- ON/OFF and Floating control signal
- Up to 5 actuators in parallel operation possible
- Electrical connection with halogen-free cable
- Simple direct mounting with universal adapter on \varnothing 8 mm to 16 mm shaft or 6 mm to 12 mm square shaft. An optional M9208-600 Jackshaft coupler kit is available for 12 to 19 mm round shafts, or 10 mm to 14 mm square shafts
- Limitation of rotation angle
- Manual positioning with crank handle
- 2 auxiliary switches, 1 adjustable

ACTUATORS

SPRING RETURN DAMPER ACTUATORS

M9220

20 Nm, ON/OFF, FLOATING AND PROPORTIONAL CONTROL

The M9220 Series Actuators are direct mount, Spring Return Electric that provide reliable control of dampers and valves in Heating, Ventilating, and Air Conditioning (HVAC) Systems.

The actuators are available for use with ON/OFF, floating, and proportional controllers. These bidirectional actuators do not require a damper linkage, and are easily installed on dampers.

FEATURES

- ON/OFF, Floating and Proportional control
- Two or three models mounted in tandem deliver twice or triple the torque
- Up to 5 actuators in parallel operation possible
- Optional adjustable end stops.
The optional adjustable end stops are used to shorten the actuator stroke electronic stall detection throughout entire rotation range that extends the life of the actuator by deactivating the actuator motor when an overload condition is detected
- Integrated cables halogen-free cables
- IP54 (NEMA2)
- Rated aluminium enclosure
- Easy-to-use locking manual override with auto release and crank storage
- Energy saving at end position
- Two integral gold auxiliary switches (xxC Models)

SAFETY DAMPER ACTUATORS

S9208

8 Nm, ON/OFF CONTROL

The S9208 Security Fire Electric, Spring Return Damper Actuator series has been specially developed for the motorized operation of fire protection dampers.

When the control signal is applied the actuator drives the damper to the operational position, while evenly tensioning the integrated spring.

After a power failure the stored energy in the spring immediately brings the damper to the safety position.

Manual operation is automatically cancelled when the actuator is in electrical operation.

FEATURES

- ON/OFF control signal
- 12 mm square shaft and 10 mm, 8 mm adapter inside the package
- Connection with halogen-free cable
- ST1.72E temperature sensor. Switch point of temperature sensor ca. 72°C
- Actuator temperature sensor to monitor ambient sensor
- Low noise level
- Manual positioning with crank handle
- 2 fixed auxiliary switches (8° and 83°)

ACTUATORS

PNEUMATIC VALVE ACTUATORS

MP8000

PNEUMATIC VALVE ACTUATORS

The MP8000 Series Pneumatic Valve-Actuators are designed to accurately position valve plugs in larger chilled water, hot water and steam applications in response to a pneumatic signal from a controller. A pneumatic positioner is also available for use in applications where sequential operation is desired or more positioning power and accuracy are required. They can be ordered as a factory fitted and ready-to-install valve/actuator combination or separately for local installation.

This robust actuator can be combined with VG8000 series flanged valves in accordance with the maximum close-off pressure ratings specified.

FEATURES

- Pneumatic positioner
- Quick-fit coupler system
- Action reversible in-situ
- Optional hand wheel for factory or in-situ installation
- Optional auxiliary switches and feedback potentiometer available

The PA-2000 Pneumatic Valve Actuators series is available for ON/OFF control.

The actuator can be combined with VG8000 series valves in accordance with the maximum close-off pressure ratings specified.

The fail safe position of the PA-2000 can be changed in-situ with a conversion kit.

FEATURES

- Manual override
- Reversible action in-situ
- Accessories available

ACTUATORS AND VALVES

VALVES

TERMINAL UNIT VALVES

VG3000

DN10...25, PN16

The VG3000 brass valve series is primarily designed to regulate the flow of water in response to the demand of a controller in zone and terminal unit applications.

Following actuators are available:

- VA-708x thermal ON/OFF actuator
- VA-709x thermal 0...10 V actuator
- VA-748x electric terminal unit valve actuator

The valves are available in 2-way, 3-way mixing and 3-way mixing with built-in by-pass configurations.

FEATURES

- 2-way PDTC (NO) with 6 bar close off pressure
- Extend range of K_{VS} (0.4....6.3)
- Forged brass body, stainless steel stem and spring
- Actuator can be field installed after piping
- Commissioning cap available as accessory (VG3000-CAP)

ACTUATORS AND VALVES

VALVES

TERMINAL UNIT VALVES

VG1600

DN15 AND DN20, PN16

The newest patented Johnson Controls 270° 6-way valve are designed to regulate the flow in an easy and most efficient way of both hot and chilled water in response to the demand of a controller in HVAC systems.

It substitutes either four through valves or two through valves and one change-over valve.

Available in 1/2" and 3/4" size, the valve is supplied at maximum K_V but smaller K_V can be obtained by installing one of the flow disk included in the valve box.

FEATURES

- Interchangeable flow disks
- Dual stainless steel AISI 304 ball and stem
- Leakage rate A, air-bubble-tight
- Tested for 100,000 full stroke cycles at harsh water conditions with 900 ppm of iron oxide
- Overpressure system to prevent any damage in the terminal unit circuit.
- 5-year unconditional warranty

V6W0000

DN15...20, PN16

The V6W0000 line consists in 6-way ball valves used for HVAC 4-pipes applications to automatically carry out the winter-summer change-over or, potentially, the control of radiant ceilings, fan coils and chilled beams.

FEATURES

- No cross-flow between floating and cooling circuits
- Different K_{VS} combination for an accurate and valuable control
- Compact and cost effective solution
- Changeable disk to select K_{VS} on site, avoiding any possible ordering mistakes

ACTUATORS AND VALVES

VALVES

PLANT VALVES

VG7000

DN15...50, PN16

VG7000 series bronze control valves are designed primarily to regulate the flow of water and steam in response to the demand of a controller in Heating, Ventilating and Air Conditioning (HVAC) systems.

These valves are available in Push-Down-To-Close (PDTC), Push-Down-To-Open (PDTO), and 3-way mixing configurations. Both electric and pneumatic actuators are available for factory or field mounting.

FEATURES

- DN15 through DN50 bronze valves, in 2-way PDTC, PDTO and 3-way mixing configurations
- Wide range of electric actuators available for all valves
- Every valve tested for tight shutoff
- Uses Standard Johnson Controls U-cup Packing
- Flexible features-and-options ordering template
- Standard bonnet and stem design
- Leakage
 - Brass trim: 0.01% of maximum flow
 - Stainless steel trim: 0.05% of maximum flow
- Inherent flow characteristics
 - Equal percentage: 2-way valves
 - Linear: 3-way valves
- Rangeability: 25:1 at 0.25...1 KVS and 100:1 at 1.6...40 K_{VS}
- Maximum recommended operating pressure drop: 240 kPa for DN15 and DN32 – 200 kPa for DN40 to DN50
- Fluid temperature operating limits valves with brass trim:
 - With V-3801 and VA-731x actuators: 2 to 120°C water /
100 kPa Saturated Steam
 - With all other actuators: 2 to 140°C water /
260 kPa Saturated Steam
- Valves with stainless steel trim:
 - 2 to 170°C /
690 kPa Saturated Steam

	DN50	380	185	75	240

Note

* The recommended spring ranges for use with a V-9502 Positioner are: 21 to 42 kPa for PDTC valves, 63 to 91 kPa for PDTO valves and 63 to 91 kPa for three way valves.

VALVES

PLANT VALVES

VG9000

DN15...100, PN6 AND PN10

These flanged valves are primarily designed to regulate the flow of water and low pressure steam in response to the demand of a controller, in Heating, Ventilating and Air Conditioning (HVAC) systems.

Following electric actuators are available:

- VA-7700 for DN15...50 valves
- VA7810 for DN15...65 valves
- VA1000 for DN65...100 valves

FEATURES

- Nodular cast iron body
- K_{VS} 0.63...160
- 2-way PDO (normally closed) and 3-way mixing configurations
- Fluid temperature 2 to 140°C
- DIN flanged

VG8000N

DN15...150, PN16

These electrically and pneumatically operated flanged valves are primarily designed to regulate the flow of water and steam in response to the demand of a controller in Heating, Ventilating and Air Conditioning (HVAC) systems.

A variety of electric and pneumatic actuators are available.

FEATURES

- Nodular cast iron body
- K_{VS} 0.1...350
- 2-way PDTC (normally open), 3-way mixing and 3-way diverting configurations
- Fluid temperature 0...180°C with Glycerine cup -10...180°C
- DIN flanged

Notes

- * For factory mounted valve actuators just add "+M" to the type model number
For ordering a valve with Cooling fin, add suffix "10" to the ordering code: i.e. VG8xxxS1H10
For ordering a valve with Glycerine cup packing, add suffix "20" to the ordering code: i.e. VG8xxxS1H20.
Reduced k_{VS} coefficients are available on request.

- ** For fluid temperature >140°C the extension kit VA1000-EP must be mounted. Max-Fluid temperature must not exceed 200°C.

VALVES

PLANT VALVES

VG8300N

DN40...150, PN16 PRESSURE BALANCED

These pressure balanced flanged valves are primarily designed to regulate the flow of water and steam in response to the demand of a controller in Heating, Ventilating and Air Conditioning (HVAC) systems.

These valves have a specially designed plug, which through specific balancing of pressures allows higher close-off pressures with standard actuator combinations.

A variety of electric and pneumatic actuators are available.

FEATURES

- Nodular cast iron bodies
- K_{VS} 25...350
- 2-way PDTC (normally open) configuration
- PN16 Fluid temperature 2...180°C with glycerin cup -10...180°C
- Pressure balanced valve plug
- DIN flanged

VALVES

PLANT VALVES

VG1000 THREADED

DN15...50, PN40

The VG1000 series ball valves are used for the water control of air treatment systems in Heating, Ventilating and Air Conditioning (HVAC) systems. They are operated by direct or remote mounted spring return and non spring return actuators.

FEATURES

- Forged brass body
- K_{VS} 1...63
- 2-way, 3-way mixing and diverting configurations
- Inherent equal percentage flow characteristic in the in-line port of all valves
- BSPP female threaded body connections
- Service
 - Hot and cold water: -30...95°C with VA9104 series
(140°C with M9000-561 Thermal Barrier)
 - 30...100°C with VA9203, VA9208, and VA9310 series
(140°C with M9000-561 Thermal Barrier)
 - Water with glycol to max 50% volume
 - Steam to max 100 kPa at 120°C with thermal barrier

VALVES

PLANT VALVES

VG1000 FLANGED

DN65...150, PN16

The VG1000 series control ball valves are used for the water control of air treatment systems in ventilation and air conditioning units as well as heating system.

They are operated by remote mounted spring return and non spring return actuators.

FEATURES

- 2-way and 3-way mixing
- Body rating PN16
- Hot water, chilled water, 50/50 glycol solutions and 172 kPa saturated steam for HVAC Systems
- Valve fluid temperature limits -20 to 140°C
- Maximum close-off pressure 2-way: 690 kPa / 3-way: 345 kPa
- Maximum recommended operating pressure drop 200 kPa for quiet service
- Flow characteristics
 - 2-way: Equal percentage
 - 3-way: Equal percentage in Inline port (Coil) and linear characteristics in angle port (By-pass)
- Rangeability greater than 500:1
- Leakage 2-way and 3-way: 0.01% of maximum flow, control port
- 3-way: 1% of maximum flow, by-pass ports

ACTUATORS AND VALVES

VALVES

PLANT VALVES

VFB BUTTERFLY VALVES

DN25...500, PN16

VFB butterfly valves series are specifically designed for a wide range of Heating, Ventilating, and Air Conditioning (HVAC) applications, including two-position and modulating control of hot, chilled, or condenser water, and 50/50 glycol solutions. All valves are factory tested for bubble-tight shutoff at 100% of the fully-rated pressure.

These valves are also bidirectional, allowing positive shutoff with the flow in either direction.

FEATURES

- **Low seating/unseating torques** - Reduce actuator torque and size requirements, particularly with lower-pressure rated valves
- **Bubble-tight shutoff** - Ensures positive closure when needed
- **Broad range of pre-assembled actuators** - Offers a wide selection for new and replacement electric and pneumatic actuators
- **High-integrity components** - Provide quality valve assemblies, combining long cycle life with optimal engineered functional designs
- **Fluid temperature limits** -29°C to 121°C
- **Flow characteristics** - Modified equal percentage

PRESSURE INDEPENDENT VALVES

VP1000

DN15...32, PN25

DN40...50, PN16

VP1000 pressure independent control valve is a combination of a differential pressure regulator and a regulating valve for flow adjustment.

VP1000 valve allows to adjust the flow rate also in case of partial load of the system and it always ensures a stable adjustment of the supply connected to it. The differential pressure regulator corrects any differential pressure variation. This leads to a considerable reduction in temperature variations and adjustment movements and to the extension of the life of the moving devices connected to it.

VP1000 valves offer a remarkable adjustment flexibility.

In combination with Johnson controls actuators they can be set to a specific flow rate value and they allow precise modulating control.

The valves always guarantee a suitable flow rate, therefore avoiding too high energy consumption.

Since VP1000 valve performs the functions of two valves (balancing and adjustment), the installation costs are considerably reduced.

The automatic flow rate limitation eliminates system adjustment costs. Since adjustment is very easy to perform, design flow rates can be modified at any time and at low costs.

Since it is not necessary to adjust the valve after its installation, the valve can work immediately after it has been assembled, for example, on the floors where works are already finished.

In order to adjust the flow rate, just set the selected value using the adjustment knob.

Since flow rate is the only parameter to be considered, choosing the suitable valve is easy and fast. VP1000 valve maximum adjustment matches the maximum flow rate allowed by the pipe size, on the basis of the values established by international standards.

FEATURES

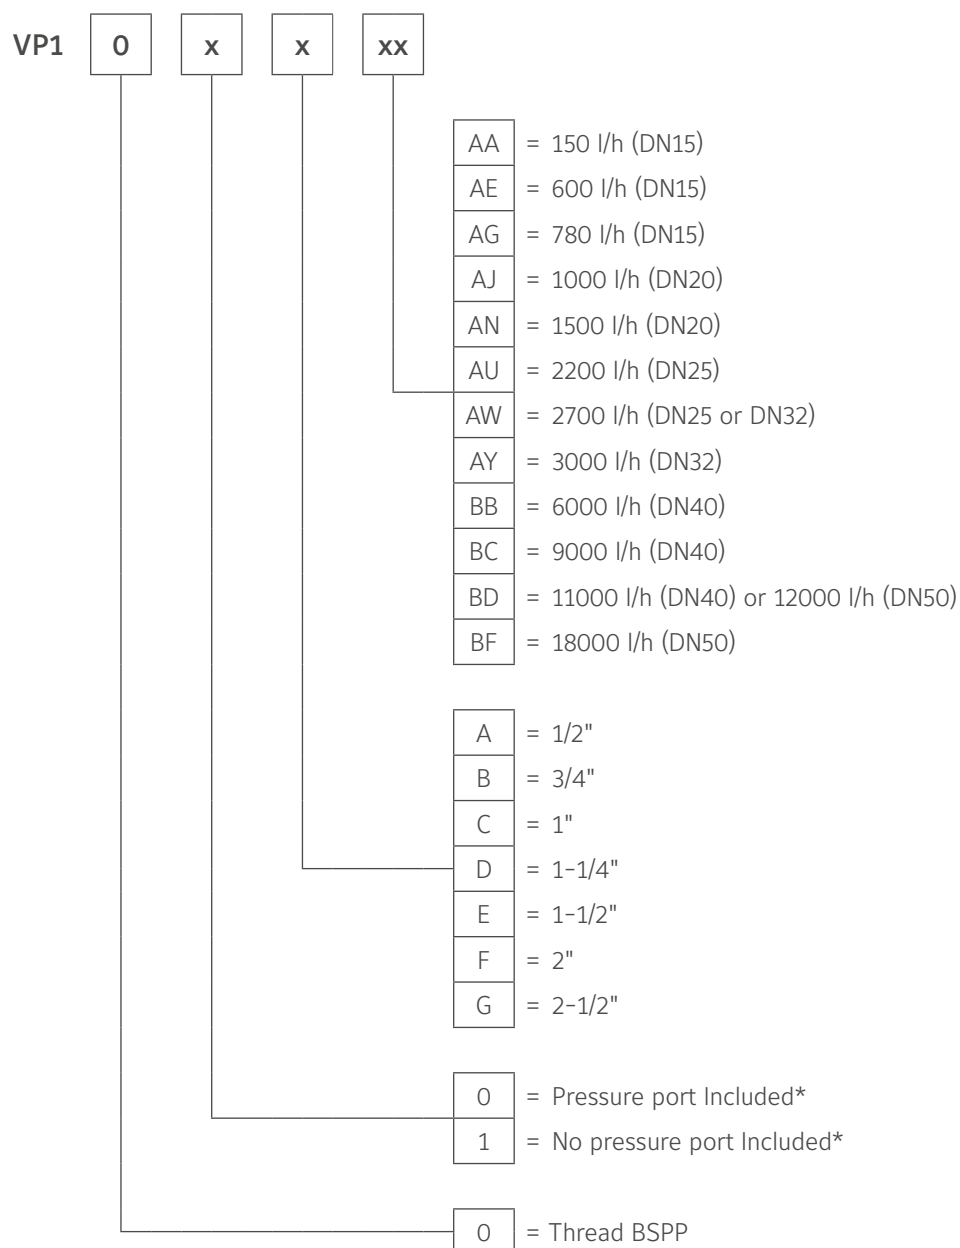

- K_{VS} calculation is not necessary
- Valve authority calculation is not required
- Specific devices or knowledge are not necessary
- Compact design that allows installing the valve also in small spaces such as fan-coils or narrow supply spaces
- Flow rate adjustment without disassembling the actuators
- Dirty resistance allows long life characteristic

VALVES

PRESSURE INDEPENDENT VALVES

VPA

DN50...150, PN16

VP1000 pressure independent control valve is a combination of a differential VPA pressure independent control valve is a combination of a differential pressure regulator and a regulating valve for flow adjustment.

VPA valves offer a remarkable adjustment flexibility. In combination with VAP actuators they can be set to a specific flow rate value and they allow precise modulating control. The valves always guarantee a suitable flow rate, therefore avoiding too high energy consumption.

Since VPA valve performs the functions of two valves (balancing and adjustment), the installation costs are considerably reduced.

The automatic flow rate limitation eliminates system adjustment costs. Since adjustment is very easy to perform, design flow rates can be modified at any time and at low costs.

FEATURES

- The max. flow of VPA valve could be set according to the requirement. The flow can be set easily by the actuator potentiometer
- The built-in balancing tube has more compact structure and can avoid damages during shipping and installation compared to the external tube
- Valve body is made of ductile iron material, with anticorrosion treatment on the surface
- High close-off pressure with very low leakage rate
- Linear actuator with high control accuracy provides the equal percentage flow curve

SENSORS

CARBON DIOXIDE

CD-2xx-E00-00

WALL MOUNT - CO₂ AND TEMPERATURE TRANSMITTER

The CD-2xx-E00-00 series is a wall mount transmitter for measuring the CO₂ levels and the relevant temperature within Heating, Ventilation and Air Conditioning applications.

The CD-2xx Series incorporates a single beam dual wavelength NDIR CO₂ sensor, which compensates for ageing effects, is highly insensitive to pollution and offers outstanding long term stability.

A multiple point CO₂ and T factory adjustment procedure leads to excellent CO₂ measurement accuracy over the entire T working range.

This compact wall-mounted device produces 0 to 10 V or 4 to 20 mA signals and it is designed to work as part of any HVAC control system.

This new CO₂ transmitter is easy to install, offers a full 3-year warranty, and requires no maintenance or field calibration

FEATURES

- Power supply 15...35 VDC / 24 VAC
- 0...10 V or 4...20 mA CO₂ and temperature output
- Models with display
- Snap-on enclosure
- Outstanding long-term stability
- CO₂ factory calibration certificate

The CD-P series duct mount transmitters are designed for the measurement of Carbon Dioxide (CO₂) and Temperature in Heating Ventilating and Air Conditioning applications where Demand Control Ventilation (DCV), fresh air and indoor Air Quality (IAQ), and rooftop air handling economizer control systems are often required.

The transmitters incorporate the a dual wavelength NDIR CO₂ sensor, which compensates for ageing effects, is highly insensitive to pollution and offers outstanding long term stability.

The CD-P1000 Transmitter is available with CO₂ output only, 0-10V or 4-20 mA, while the CD-P2000 range offers CO₂ and Temperature with active and passive outputs.

FEATURES

- Dual wavelength non-dispersive infrared technology (NDIR)
- Measuring range 0...2000 ppm
- CO₂ Accuracy at 25°C: < ± (50 ppm +2% of measured value)
- Temperature accuracy ±0.3°C
- Response time τ_{63} < 100s at 3m/s (590 ft/min) air speed
- Power supply: 24 VAC ±20% or 15 - 30 VDC
- Housing material polycarbonate, UL94V-0 approved
- Protection class enclosure: IP65, probe: IP20
- Working conditions: -20 to 60°C; 0...95% RH (non-condensing)
- Factory calibration certificate (DIN EN10204 - 2.2)

SENSORS

DEW POINT

HX-9100

DEW POINT SENSOR

The HX-9100 dew point sensor provides warning signal in case of condensation on surfaces such as cold water pipes, cool ceilings and windows.

The HX-9100 can be powered at 15 VDC or 24 VAC, it detects the dew point condition providing an on/off signal to an analog or a digital input of the controller that will override functions in order to prevent the condensation on cooled surfaces.

FEATURES

- Supply voltage: 15 VDC $\pm 10\%$ or 24 VAC $\pm 15\%$
- Action: 0 to 10 VDC or ON/OFF
- Hysteresis: 1%
- Output: 0.5 VDC max @ RH > 90%
- Protection class: IP44

DIFFERENTIAL PRESSURE

DP7000 – DP2500 – DP0250

DIFFERENTIAL PRESSURE TRANSMITTER

The DP low differential pressure transmitter series is an accurate and cost competitive solution for measuring low pressures of air and non-aggressive gases in order to monitor and control pressures in building automation, HVAC and clean room systems.

FEATURES

- Power supply 24 VAC/VDC
- Pressure range: 8 different ranges in one device (see the table)
- Output signal: 0...10 VDC or 4...20 mA
- Automatically autozero point adjusting
- Response time selectable
- 2 rows x 12 characters digit display
- Back-light display
- Protection class: IP54
- Configurable measuring unit (Pa, kPa, mbar, inch WC, mm WC, psi)
- Factory Calibration Certificate available on request

DP7000-DP2500-DP0250 DIFFERENTIAL PRESSURE

FACTORY CALIBRATION CERTIFICATES

On request, the DP7000, DP2500 and DP0250 transmitter can be provided with the Factory calibration certificate for a specific pressure range setting. The certificate will report:

- Date and validity
- Device type and calibration range
- Device ID
- Test report on 3 measurement points

The calibration test performed in the factory ensures the accuracy of the pressure readings measured by the sensor. A calibration certificate is provided with any error measured in the test declared. This error value can be used when configuring the analog input channel for the sensor. Select the error at the nearest value the pressure sensors is expected to be typically measuring, this should normally be mid-range, and use this as the offset when setting up the analog input channel. This will ensure the sensor provides the greatest accuracy possible at the normal operating condition.

HOW TO ORDER A DP WITH CALIBRATION CERTIFICATE

The calibration certificate performed in the factory can be provided for a specific pressure range only. To determine the ordering code please select the Certificate required from the table below. Take into consideration that pressure range changes from one model to another.

		DP7000	DP2500	DP0250
DPxxxx-	C1	0...1000 Pa	-100...+100 Pa	0...25 Pa
	C2	0...1500 Pa	0...100 Pa	0...50 Pa
	C3	0...2000 Pa	0...250 Pa	0...100 Pa
	C4	0...2500 Pa	0...500 Pa	0...250 Pa
	C5	0...3000 Pa	0...1000 Pa	-25...+25 Pa
	C6	0...4000 Pa	0...1500 Pa	-50...+50 Pa
	C7	0...5000 Pa	0...2000 Pa	-100...+100 Pa
	C8	0...7000 Pa	0...2500 Pa	-150...+150 Pa

For Display or Autozero options then add:

- **D** Display
- **AZ** Autozero Option
- **AZ-D** Autozero and Display

Note

- i.e. **DP0250-C3-AZ** DP0250 with autozero with Calibration certified for 0...100 Pa range setting
- DP2500-C3-AZ-D** DP2500 with autozero and Display with Calibration certified for 0...250 Pa range setting
- DP7000-C3** DP7000 Calibration certified for 0...2000 Pa range setting

SENSORS

PLANT HUMIDITY HT-1300

DUCT MOUNT

Specially designed for HVAC, the HT-1300 duct mount humidity sensor is a cost effective, highly accurate and reliable solution for measuring relative air humidity and temperature.

The enclosure minimizes installation cost and provides outstanding protection against contamination and condensation, thus ensuring flawless operation.

The HT-130x-UD1 employs the new humidity/temperature sensor with excellent long-term stability and resistance to pollutants. Long term performance is granted by the PTFE membrane fitted to the standard protection cap, suitable for most common HVAC applications.

The standard protection cap can be replaced with a series of alternative protection caps specially designed for harsh environments.

FEATURES

- Power supply 15...35 VDC / 24 VAC $\pm 20\%$
- Humidity range 0...100%
- Humidity output 0...10 VDC
- Humidity accuracy 2,5% from 10 to 95% RH
- Temperature outputs 0...10 VDC or passive
- Duct probes length 200 mm
- Protection caps for harsh environment application
- Protection class: IP65
- Inspection Certificate according EN 10204:2004

SENSORS

PLANT TEMPERATURE

TS-6300

PLANT TEMPERATURE SENSOR

The TS-6300 series temperature sensors provide a passive signal that corresponds to the air or water temperature Heating, Ventilation and Air Conditioning (HVAC) applications.

They are passive resistive signal NTC K2, NTC K10, Pt100 or Pt1000 related to the sensed temperature.

The TS-6300 temperature sensor series has been designed to work as a part of any HVAC control system.

FEATURES

- Wide range of mounting types and signal outputs
- Different length of tubes and wells for duct and immersion applications
- Bayonet mounting system
- For immersion applications, well can be mounted before duct sensor is mounted
- IP54 ingress protection (except cable sensor)
- IP67 ingress protection for cable sensor

PRESSURE

PT-5217

LIQUID OR AIR PRESSURE TRANSMITTER

The PT-5217 pressure transmitter accurately measures pressure and converts the measurement into a standard proportional 0...10 V signal.

The PT-5217 is especially adapted to measure relative and absolute pressure of liquid and gases.

The pressure transmitter consists of a piezoresistive ceramic measuring cell with a diaphragm, installed in a stainless steel housing.

FEATURES

- Compact, rugged construction
- Negligible temperature influence on accuracy
- Low hysteresis
- High accuracy
- Direct mounting, 1.5 m cable included
- Splash proof enclosure

SENSORS

ROOM HUMIDITY HT-1000

WALL MOUNT

The HT-1000 series room humidity sensors provide active sensing of relative humidity and on specific models, also active/passive sensing of temperature in HVAC applications.

It features a polymer capacitance humidity sensing element and provides within either $\pm 2\%$ or $\pm 4\%$ accuracy a voltage output signal proportional 0 to 100% relative humidity.

The HT-1000 series room humidity sensors are designed for use with any type of Johnson Controls or third party HVAC controllers.

FEATURES

- Supply voltage: 15 VAC / 24 VAC
- Output RH%: 0...10 VDC
- Output Temperature: 0...10 VDC, NTC K2, Pt1000
- Protection class: IP30

FLUSH MOUNT SENSORS

RS-7000

ANALOG SENSORS

The Flush Mount RS-7000 Analog Sensors Series with LCD is an electronic room command module designed to work with Johnson Controls® controllers in heating, ventilating and air conditioning (HVAC) systems. Models in this series monitor the zone temperature and humidity, and transmit data to a field controller using up to three analog outputs.

RS-7060-0000 can toggle between Temperature and RH on the display, depending on desired default display.

The temperature only model RS-7080-0002 includes Fan mode push button to set the desired fan speed (OFF-LOW-MED-HIGH-AUTO). Both models with display have occupancy button, which allows user to select when the zone is occupied, to set the comfort mode only when is necessary.

The model without display RS-7040-0000 provides a combined measurement of the zone temperature and humidity.

Installation is quite easy, given the possibility to configure the Setpoint Mode and temperature limits during installation.

FEATURES

- **Temperature sensor with combined humidity for best comfort** - RS-7000 range offers fan speed control or combined humidity sensor for best comfort
- **Configurable options reduce stock need** - The setpoint mode adjust or warmer/cooler can be configured during the installation
- **Large backlit display in a low profile enclosure** - Provides a modern looking and clear user interface
- **Customizable display helps to meet building policy** - RS-7000 can show actual values or setpoint only
- **Keypad lockable in public space** - The RS-7000 sensor buttons can be locked against misuse in public space
- **Flush mount installation** - Suitable for various installation boxes, offers low profile enclosure

FLUSH MOUNT SENSORS

NSA-7000

NETWORK SENSORS

The Flush Mount NSA-7000 Network Sensor Series with LCD is an electronic zone sensor designed to function directly with Johnson Controls® BACnet® MS/TP digital controllers in heating, ventilating and air conditioning (HVAC) systems. Models in this series monitor the temperature set point, zone temperature and humidity and transmit this data to a field controller on the Sensor Actuator (SA) bus. NSA-FHR71x3-0 can toggle on the display between temperature and relative humidity, depending on desired default display. A push button is included in NSA-FTD70x3-0 to set the desired fan speed (OFF/LOW-MED-HIGH-AUTO). All models have occupancy button, which allows user to signal when the zone is occupied, to set the comfort mode only when is necessary. The model without display NSA-FHN7001-0 has not buttons but provides an accurate measurement of the zone temperature and humidity.

For communication wiring flexibility, all models have both a modular jack and screw terminals for an easy connection to the Metasys® controllers.

FEATURES

- **Large backlit display in a low profile enclosure** - Provides a modern looking clear user interface
- **Flush mount installation** - Suitable for various installation boxes, offers low profile enclosure
- **Programmable SA Bus Address** - Addressable through the display without the use of tool or screwdriver
- **Easy wiring** - NSA700 offers both type of connections: Modular Jack (MJ) and Screw terminal (ST)
- **Configurable options help product selection** - Setpoint type and limits can be configured during the installation
- **Customizable display helps tenants to meet building policy** - NSA can show actual values or setpoint only
- **Keypad lockable in public space** - The NSA sensor buttons can be locked against misuse in public space
- **Customize colors meet customer needs** - The white front panel may be optionally customized in black or other colors

TM-1100

ROOM COMMAND MODULE

The TM-1100 series of room command modules are designed for use with the TC-9102, TC-9109 and TCU series of DDC terminal unit controllers.

The setpoint dial enables the room occupant to adjust the working set point of the controller within the range of 12 to 28°C or -3 to +3°, according to the model number.

The occupancy button enables the occupant to switch the mode of operation of the controller between COMFORT and STANDBY or to request a temporary COMFORT mode during NIGHT operation.

A LED indicator shows the current operating mode. For TC-9102 and TCU fan coil unit controllers, a room command module with a 3-speed fan override is available. Models without a temperature sensing element are provided for application where the temperature sensor is mounted inside the fan coil unit.

FEATURES

- Passive sensor
- NTC K2 temperature output
- Remote temperature setpoint adjustment
- 3-speed fan override
- Occupancy override button
- Room enclosures 80 x 80 mm
- Protection class: IP30

TM-2100

ROOM COMMAND MODULE

The TM-2100 series of room command modules are designed for use with the FCC and Facility Explorer series of DDC terminal unit controllers. The setpoint dial enables the room occupant to adjust the working set point of the controller within the range of 12 to 28°C or -3 to +3°, according to the model number.

The occupancy button enables the occupant to switch the mode of operation of the controller between COMFORT and STANDBY or to request a temporary COMFORT mode during NIGHT operation.

A LED indicator shows the current operating mode. A Room Command Module with a 3-speed fan override adjuster is available.

FEATURES

- Passive sensor
- NTC 10K temperature output
- Remote temperature setpoint adjustment
- 3-speed fan override
- Occupancy override button
- Room enclosures 80 x 80 mm
- Protection class: IP30

ROOM COMMAND MODULE

The TM-3100 series room temperature sensor provide passive sensing of temperature in HVAC application.

The TM-3100 is equipped with a Pt1000 class A sensing element and provides an output proportional signal to the measured ambient temperature.

The TM-3100 series room temperature sensor is designed for use with the Facility Explorer series and with the Field Equipment controller series.

FEATURES

- Passive sensor
- Pt1000
- Room enclosure: 80 x 80 mm
- Protection Class: IP30

ANALOG SENSORS

TE-7000

ROOM COMMAND MODULE

The TE-7000 room command module is designed for use with Johnson Controls VAV Modular Assembly.

The module has an NTC temperature sensor, a dial for setpoint adjustment within the range of 12 to 28°C or -3 to +3K, and an occupancy button with an LED indicator.

If the VAV controller is not already in occupied mode, as shown by the LED indicator, the occupant may press the occupancy button to obtain comfort control for a set period of time, normally defaulted to one hour.

The module also has a built-in connector for a PC with the software to test and commission the VAV modular assembly and the air supply system.

FEATURES

- Power supply: +15 Vdc
- Temperature sensor: NTC
- Occupancy override button
- Protection class: IP30
- Remote setpoint adjustment

NETWORK SENSORS

NS

NETWORK ROOM COMMAND MODULE

The NS series network sensors are designed to function directly with *Metasys*® system Field Equipment Controllers (FECs), Input/Output Modules (IOMs), Variable Air Volume (VAV) Modular Assembly (VMA16) Controllers.

The majority of NS series network zone sensors monitor room temperature; however, options are available to also monitor zone humidity, carbon dioxide (CO₂), local temperature setpoint adjustments and other variables. This data is transmitted to a controller on the Sensor Actuator (SA) Bus.

FEATURES

- BACnet® Master-Slave/Token-Passing (MS/TP) protocol communication: provides compatibility with *Metasys* system field controllers and Facility Explorer programmable controllers in a proven communication network
- Backlit Liquid Crystal Display (LCD) available on some models: provides real-time status of the environment with backlighting activated during user interaction
- Simple temperature setpoint adjustment available on some models: enables to change the setpoint with the turn of a dial or just pressing up and down buttons
- Temporary occupancy available on some models: provides a timed override command, which temporarily initiates an alternate mode
- Field selectable default display setting on some models: allows to toggle between temperature and RH on the display and set the desired default for continuous viewing
- Fahrenheit/Celsius (F/C) button available on some models: toggles the display temperature between degrees Celsius and degrees Fahrenheit

SENSORS

NETWORK SENSORS

NS8000

SERIES NETWORK SENSORS

The NS8000 series network sensors are designed to function directly with *Metasys*® system Field Equipment Controllers (FECs), Input/Output Modules (IOMs), Variable Air Volume (VAV) Modular Assembly (VMA16) Controllers.

The majority of NS series network zone sensors monitor room temperature; however, options are available to also monitor zone humidity, carbon dioxide (CO₂), local temperature setpoint adjustments and other variables. This data is transmitted to a controller on the Sensor Actuator (SA) Bus.

FEATURES

- **BACnet® Master-Slave/Token** – Passing (MS/TP) protocol communication: provides compatibility with *Metasys* system field controllers and Facility Explorer programmable controllers in a proven communication network.
- **Single and multifunctional sensors** – Choose temperature, humidity, CO₂, and occupancy sensing depending on HVAC needs.
- **Simple temperature setpoint adjustment or Warmer/Cooler mode available on display models** – Configure simple setpoint adjustment or Warmer/Cooler mode.
- **Onboard occupancy sensor available on PIR models** – Maximizes up to 30% energy savings in high-energy usage environments, and facilitates trending of floor space usage.
- **Temporary occupancy included on all display and Warmer/Cooler models** – Provides a timed override command, which initiates a temporary occupancy state.
- **Field-selectable default display setting on display models** – Toggle between temperature, RH or temperature setpoint on the display, and set the desired default for continuous viewing.
- **Fahrenheit/Celsius (°F/°C) selectable on display models** – Display temperature in degrees Fahrenheit or degrees Celsius.
- **All display models meet California Energy Code (Title 24)** – Displays the required State of California Title 24 economizer fault conditions.
- **All display models include a screen lockout** – Prevents sensor tampering.
- **Serialized sensors and calibration certificates** – Obtain factory calibration certificates for all models.

SENSORS

WIRELESS SENSORS

WRZ

ZigBee WIRELESS PROTOCOL

The WRZ series wireless room sensors are designed to sense room/zone temperature and transmit wireless temperature control data. Some models also sense and transmit relative humidity.

In a ZFR1800 series wireless field bus system application, the sensors communicate with FEC16 Series, FEC26 series and VMA16 series controllers by means of the ZFR1811 router.

In wired field bus applications, the sensors communicate with a WRZ-7860 wireless receiver. The WRZ-7860 receiver transfers data to the controller by means of the Sensor Actuator (SA) communication bus. In a typical application, one WRZ series sensor reports to one WRZ-7860 receiver, but up to five WRZ series sensors can be associated with a single WRZ-7860 receiver for multi-sensor averaging or high/low temperature selection.

WRZ series sensor models are available with or without a Liquid Crystal Display (LCD). Depending on the sensor model, the WRZ series sensor can transmit sensed temperature, setpoint temperature, sensed humidity, occupancy status and PIR occupancy sensor and low battery conditions to an associated router or receiver. The WRZ series sensors are designed for indoor, intra-building applications only.

The WRZ sensors use direct-sequence, spread-spectrum RF technology, and operate on the 2.4 GHz Industrial, Scientific and Medical (ISM) band. The receiver meets the IEEE 802.15.4 standard for low power, low duty cycle RF transmitting systems.

Refer to the WRZ Series Wireless Room Sensors Product Bulletin (LIT-12011653) for important product application information.

FEATURES

- Wireless RF design
- Integral wireless signal strength testing built into the sensor
- Easy installation and relocation
- Easily-applicable data types
- Simple, field adjustable DIP switches
- Optional, battery-powered WRZ-SST-110 wireless system survey tool
- High resistance to RF interference from other radio devices or RF noise sources
- User selectable default display for humidity models
- Display models
- Three temperature setpoint range options

ELECTRIC FANCOIL THERMOSTAT

T125-E

STAND-ALONE FANCOIL THERMOSTATS

T125 electric fan coil thermostats are designed to control heating, cooling, or air conditioning unit in commercial, industrial and residential installation.

Typical application includes the control of fan coil units, packaged terminal air conditioners and combination heating and cooling equipment. As part of the system that consists of a two-way or three-way valve and a multi-speed line voltage fan.

FEATURES

- 220 V power supply
- Heating and Cooling mode
- 2-4 pipes configuration
- 3-speed fan override
- 86 x 86 mm room enclosures
- Temperature dial ranges 10 to 30°C
- Relay output max. 5A

ELECTRIC FANCOIL THERMOSTAT

T7200

STAND-ALONE FANCOIL THERMOSTATS

The T7200 Series Modbus® LCD thermostats are designed to control heating and cooling through air conditioning unit in commercial and residential application.

Typical applications include the control of fancoil units, floor heating, packaged terminal air conditioners and combination of heating and cooling equipment.

T7200 with its large LCD screen displays the working mode (cooling, heating, air venting, floor heating), fan speed, indoor temperature and set point.

FEATURES

- Flush mount for a stylish appearance
- Large screen backlight with timeout
- Stand Alone
- 2 or 4-pipes ON/OFF or Proportional
- Multispeed Fan or Proportional Fan speed (ECM)
- Customizable display can show actual temperature or setpoint only
- Protected against misuse in public spaces
- Function, On/Off Timer, ESP filter control

Note

1. User can configure one model to different applications by parameter setting
2. T7200-TB20-9J00 and T7200-TB20-9J0B don't have remote sensor input and binary input;
T7200-TF20-9JS0 and T7200-TB21-9JS0 only have binary input

ELECTRIC FANCOIL THERMOSTAT

T7600

Modbus® FANCOIL THERMOSTATS

The T7600 Series Modbus® LCD thermostats are designed to control heating and cooling through air conditioning unit in commercial and residential application.

Typical applications include the control of fancoil units, floor heating, packaged terminal air conditioners and combination of heating and cooling equipment. As part of the system, T7600 series thermostat can control 2-way or 3-way valve and multiplespeed line voltage fan or ECM fan.

T7600 with its large LCD screen displays the working mode (cooling, heating, air venting, floor heating), fan speed, indoor temperature and set point.

FEATURES

- Flush mount for a stylish appearance
- Large screen backlighted with timeout
- Stand Alone or Communicating in Modbus® RTU
- 2 or 4-pipes ON/OFF or Proportional
- Multispeed Fan or Proportional Fan speed (ECM)
- Customizable display can show actual temperature or setpoint only
- Protected against misuse in public spaces
- Configurable inputs
- Function, On/Off Timer, ESP filter control

* Input 1 can be used for remote temperature monitoring or in two pipe system to determine the seasonal changeover. Requires a 10K NTC JC Type II.

ELECTRIC FANCOIL THERMOSTAT

T8800

BACnet® MS/TP THERMOSTATS

The T8800 touch screen thermostats designed to control heating and cooling in commercial, industrial and residential installation.

Typical applications include the control of fan coil units, packaged terminal air conditioners and combination of heating and cooling equipment. As part of the system, the T8800 thermostats control two-way or three-way valves and multi-speed line voltage fans.

The T8800 can communicate with any Building Automation System. The T8800 models are designed to be connected to the Johnson Controls Building Automation System *Metasys*® using BACnet MS/TP communication.

The integration in *Metasys* improves usability and enhances energy saving strategies.

The large LCD touchscreen display of the T8800 thermostat provides the status of current working mode, the fan speed, the indoor temperature and the temperature set point.

FEATURES

- Stylish appearance
- Touch screen backlighted with timeout
- Stand Alone or Communicating
- BACnet MS/TP
- Protected against misuse (Keys lockable)
- Remote or occupancy options
- Timer function, runtime and On/Off Timer

SMART THERMOSTAT CONTROLLERS

TEC3000

STAND-ALONE, BACnet® MS/TP OR N2 NETWORKED

The TEC3000 series thermostat controllers are stand-alone, and field-selectable BACnet® Master-Slave/Token-Passing or N2 networked devices that provide on/off, floating, and proportional control of the following:

- Local hydronic reheat valves
- Pressure-dependent VAV equipment with or without local reheat
- Two-or four-pipe fan coils
- Cabinet unit heaters
- Other zoning equipment using an ON/OFF, floating, or 0 to 10 VDC proportional control input

Models also provide single-or two-stage control of unitary rooftop units (RTUs) with or without economizers and heat pumps.

FEATURES

- Stand alone or BACnet (MS/TP) or N2 Bus
- Touchscreen display with timeout of the adjustable backlight
- Customizable user interface with password protection
- Local weekly schedules available via BACnet
- Mobile Access Portal (MAP) gateway compatibility
- Auto-tuning (PRAC+) and optimal start
- Measurement trends of the last 24 hours
- Commissioning menu and fault diagnostic warnings
- USB port for back-up, restore and cloning
- Multiple fan configurations On/Off or VSD (0...10V)
- Optional on board occupancy sensor (PIR)
- Optional integral humidity sensor with dehumidification

TECHNICAL SPECIFICATION

Power Requirements	19 to 30 VAC, 50/60 Hz, 4 VA at 24 VAC nominal, Class 2 or safety extra-low voltage (SELV)
Touch screen display	4,2" Backlit dimmable, with backlight time-out
Analog output rating	0 to 10 VDC into 2k ohm resistance – minimum (Proportional Control Models)
Relay contact rating	19 to 30 VAC, 1.0 A maximum, 15 mA minimum, 3.0 A in-rush
Binary Inputs	Dry contact across terminal COM to terminals BI1, BI2 or COS
Analog Inputs	Nickel, platinum, A99B, 2.25k NTC, 10k NTC, 10k NTC Type 3
MS/TP Network	Up to 100 devices maximum per Network Automation Engine (NAE); 1,219 m maximum cable length, repeaters can be added to extend this length BACnet Testing Laboratories™ (BTL) 135-2001 Listed BACnet Application Specific Controller (B-ASC)
Temperature Range	
Backlit display	-40.0 to 50.0°C in 0.5° increments
Heating control	4.5 to 32.0°C
Cooling control	12.0 to 38.0°C
Accuracy	
Temperature	±0.5 °C at 21.0 °C typical calibrated
Humidity	±5% RH from 20 to 80% RH at 10 to 32 °C
Minimum Deadband	1°C between heating and cooling
Occupancy Sensor (PIR)	Minimum of 94 angular degrees up to a distance of 4.6 m; based on a clear line of sight
Ambient Conditions	
Operating	0 to 50°C; 95% RH maximum, non-condensing
Storage	-30 to 50°C; 95% RH maximum, non-condensing
CE Compliance	Johnson Controls declares that this product complies with the essential requirements and other relevant provisions of the Low Voltage Directive (LVD), the EMC Directive, and the RoHS Directive.

ANALOG ROOM CONTROLLER

TC-8900 / PM-8900

ROOM THERMOSTATS

TC-8900 is a family of analogue controllers designed for control of fan coils with 2-pipe, 2-pipe with change-over, 2-pipe with electrical coil or 4-pipe configurations.

For applications without fan speed control the family includes stand alone units (TC-890x), local controllers (TC-893x) with remote setpoint module (ES-8930) and local controllers (TC-894x) with central setpoint module (ES-8940).

For applications with fan speed control the family includes the PM-8900 power modules in connection with TC-894x with or without central setpoint module (ES-8940).

FEATURES

- 2-pipe, 2-pipe with change-over, 2-pipe with electrical coil or 4-pipe configurations with and without 3-speed fan override
- 80 x 80 mm room enclosures
- Temperature dial ranges 12 to 28°C, +/-
- 24 VAC power supply for the TC-8900 controls, 230 VAC in connection with the PM-8900 power module

DIMENSIONS (in mm)

TC-8900 / PM-8900 - ANALOG ROOM CONTROLLER

ELECTRONIC HEATING CONTROLLER

ER65-DRW

DIGITAL CONTROLLER HOT WATER AND AIR UNIT

The controller is a digital device for domestic or residential heating units. It covers water and air heating applications.

All-in-one design allows full flexibility to apply a single controller to many small heating applications.

The controller incorporates a comprehensive energy saving application, and can be connected to a supervisory system via its on board communications port.

FEATURES

- Standard heating systems
- Compact design: up to 3 sensors, 2 digital inputs and 5 outputs in a 4 DIN modules housing
- Robust front panel for durability and long term use
- Removable plug connectors for quick mounting and wiring
- Direct 230 V supply: no external transformer required
- Embedded RS485: no additional communication card required
- Pre-set models and selectable options to extend controller options

ER65-DRW ELECTRONIC HEATING CONTROLLER

DIMENSIONS *(in mm)*

ORDERING INFORMATION

CODE	DESCRIPTION
ER65-DRW-501C	Heating controller, sensor not included, compatible with the ER-NTC sensor line, Modbus® communication

ELECTRO-PNEUMATIC
TRANSDUCERS

EP-1110

ELECTRIC TO AIR PRESSURE TRANSDUCER

The EP-1110 is an electric to air pressure transducer designed to convert an electrical input signal into a pressure output with a linear relationship. It is using a force balance with moving coil system. The input signal 0...+10 V or 0...20 mA is converted to an output signal 0,2...1 bar.

DIMENSIONS (in mm)

ORDERING INFORMATION

CODES	INPUT	OUTPUT
EP-1110-7001	0...10 V (DC), $R_i \geq 1 \text{ k}\Omega$, current through coil approx. 10 mA	20-100 kPa, linearly proportional to input
EP-1110-7002	2...10 V (DC), 0...10 V (DC), $R_i \geq 1 \text{ k}\Omega$, current through coil approx. 10 mA	20-100 kPa, 3...100 kPa, linearly proportional to input
EP-1110-7003	0...20 mA (DC), $R_i \leq 450 \Omega$, current through coil approx. 10 mA	20-100 kPa, linearly proportional to input
EP-1110-7004	4...20 V (DC), 0...20 mA (DC), $R_i \leq 450 \Omega$, current through coil approx. 10 mA	20-100 kPa, 3...100 kPa, linearly proportional to input

ELECTRO-PNEUMATIC TRANSDUCERS

EP-2000

ELECTRO-PNEUMATIC TRANSDUCER

The EP-2000 electro-pneumatic transducer with motor drive is used for converting an electrical contact signal into a 0.2 to 1.0 bar pneumatic standard signal.

The instrument is suitable for connection of electrical incremental controllers with pneumatic devices or for electrical remote adjustment of the set point of pneumatic controllers.

A reversible synchronous motor drives a cam disk over a gear box.

The direction of travel of the cam disk is transformed by a leaf spring into a change of force, which by a pneumatic force comparison system is converted into a control pressure change.

On models with position transmitter a positioner is installed for electrical position feed back.

FEATURES

- High linearity
- Low hysteresis
- high accuracy
- Small supply air influence
- Small air consumption
- High air capacity

EP2000 ELECTRO-PNEUMATIC TRANSDUCERS

ORDERING INFORMATION

EP-2000-7001	120 seconds	---	230 V
EP-2000-7004			24 V
EP-2000-7021		2 kΩ potentiometer	230 V
EP-2000-7024			24 V

ELECTRO-PNEUMATIC TRANSDUCERS

EP-8000

ELECTRO-PNEUMATIC TRANSDUCER

EP-8000 series electro-pneumatic transducers convert a voltage or current signal from an electronic controller into a pneumatic output pressure signal. An increase or decrease in the input signal proportionally increases or decreases (respectively) the output pressure signal from the EP-8000.

It is designed to output a proportional pneumatic control signal in response to an electronic control signal. All units feature barbed air connections for 5/32 or 1/4 inch O.D. polytubing.

Sequencing of pneumatic valve or damper actuators can be accomplished using a Johnson Controls V-9502 (valve) or D-9502 (damper) actuator positioner.

Four models are available, which are grouped into two basic versions: low volume output units (nonrelay) and high volume output units (relay).

FEATURES

- Compact, simple design
- Choice of 0 to 10 VDC or 4 to 20 mA input range
- Hypodermic needle test point
- Factory set, fully adjustable zero and span
- High accuracy with low hysteresis

EP8000 ELECTRO-PNEUMATIC TRANSDUCERS

DIMENSIONS (in mm)

ORDERING INFORMATION

CODES	OUTPUT	INPUT RANGE	FACTORY OUTPUT RANGE kPa (psig)
EP-8000-1	Low volume (non-relay)	0.5...9 VDC	7...126 (1-18)
EP-8000-2	High volume (relay)	0.25...9.5 VDC	3.5...133 (0.5-19)
EP-8000-3	Low volume (non-relay)	4...20 mADC	21...105 (3-15)
EP-8000-4	High volume (relay)	4...20 mADC	21...105 (3-15)

ACCESSORIES

CODES	DESCRIPTION
R-3710 Series	0.18 mm restrictor (required for low volume models)

A-4000-8001	Inline air filter (required for all models)
JC 5361	Hypodermic needle test probe assembly

BUILDING AUTOMATION PRODUCTS

SUPERVISOR SOFTWARE AND TOOLS

METASYS® SOFTWARE

EDE SOFTWARE

EXTENDED DATA ENGINE

EDE is a powerful multiprotocol software application. It allows multiple connectivity with the most commonly used protocols with serial connections and over IP. EDE has been the connectivity Engine for the M3i/M5i supervisory software solution since 2007. The EDE BACnet option now allows the EDE to be used with *Metasys* to meet many complex integration requirements.

FEATURES

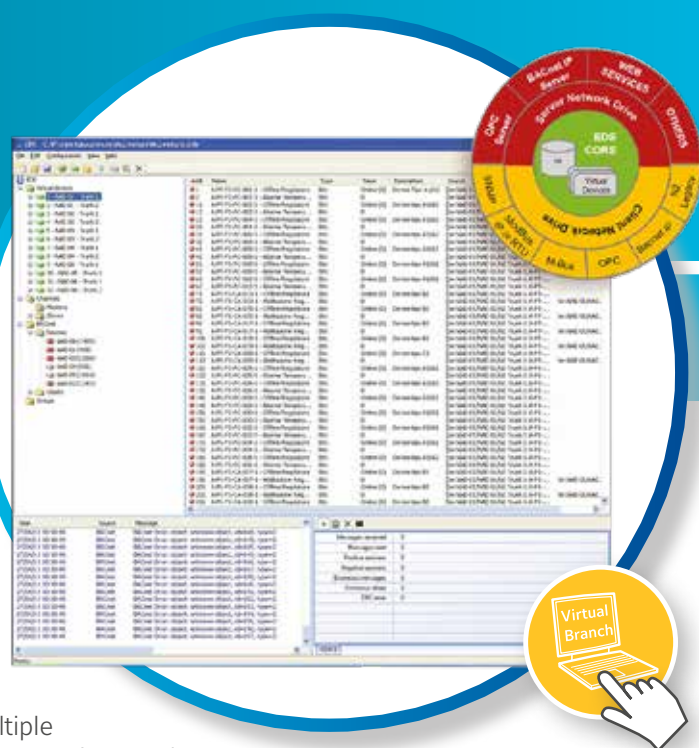

- EDE manages the following protocols either as a Client or Server:
- OPC (Client and Server)
- Modbus®S RTU (Master and Slave)
- Modbus IP (Client and Server)
- MBUS (Client)
- MBUS IP (Client)
- SNMP (Polling using GET and Trap receiver)
- BACnet IP (Client and Server)
- SOAP Webservices (Server)
- N2 (System 91, N2 Open and N2B)
- REST Webservices (Server)

In addition to the above EDE provides the following other features:

- Data Bridge between all the connectivity's above
- Applying Math Calculations to the values
- Trend Feature

IMPORTANT

EDE must be installed on a suitable hardware platform, please consult the EDE Installation and Commissioning Application Note for details. On request EDE can be supplied pre-installed on an industrial PC, please contact SIS Europe for details and pricing. Microsoft Windows 7.0 is the latest OS version validated for EDE. To use EDE with later versions of Windows, please contact SIS Europe for advice.

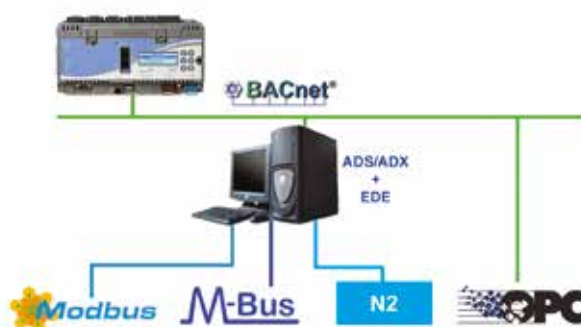

SUPPORTED ARCHITECTURE

The EDE software with BACnet supports several different architectures and can be installed on various hardware platforms.

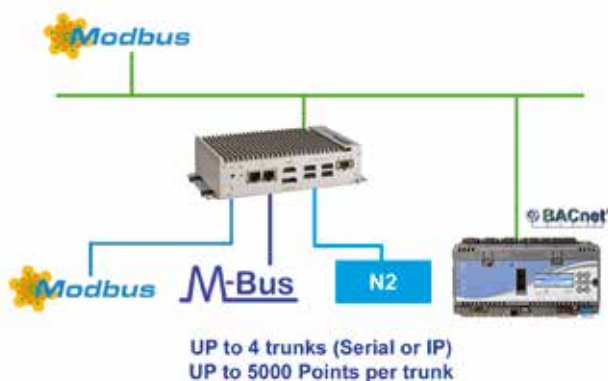

BACnet option – Standalone solution

Installed with ADS/ADX server

BACnet option with additional IP protocol

EDE SOFTWARE - METASYS® SOFTWARE

ORDERING INFORMATION

When ordering and applying the EDE it is necessary to order the Extended Data Engine software plus the protocol drivers required.

For example to use EDE to manage a Modbus® integration into *Metasys* you would need to order the product codes as follows: MW-EDE-0E and SIS-EDE-BAC-0E and MW-EDE-04-xx-0E.

EDE BASE SOFTWARE		EDE BACNET (REQD FOR METASYS)		INTEGRATION PROTOCOL DRIVERS (UP TO 4 TRUNKS, 5000 OBJECTS PER TRUNK)	
CODE		CODE		CODES	DESCRIPTION
MW-EDE-0E	+	SIS-EDE-BAC-0E	+	MW-EDE-02-05-0E	EDE N2 Protocol 500 N2 Objects
				MW-EDE-02-15-0E	EDE N2 Protocol 1500 N2 Objects
				MW-EDE-02-50-0E	EDE N2 Protocol 5000 N2 Objects
				MW-EDE-04-05-0E	EDE Modbus® Serial 500 Objects
				MW-EDE-04-15-0E	EDE Modbus Serial 1500 Objects
				MW-EDE-04-50-0E	EDE Modbus Serial 5000 Objects
				MW-EDE-05-05-0E	EDE Modbus IP 500 Objects
				MW-EDE-05-15-0E	EDE Modbus IP 1500 Objects
				MW-EDE-05-50-0E	EDE Modbus IP 5000 Objects
				MW-EDE-06-05-0E	EDE M-BUS IP 500 Objects
				MW-EDE-06-15-0E	EDE M-BUS IP 1500 Objects
				MW-EDE-06-50-0E	EDE M-BUS IP 5000 Objects

CODES	DESCRIPTION
SIS-EDE-BAC-0E	EDE Software only, BACnet IP Client/Server, 20,000 Objects

METASYS® SOFTWARE

ADS-LITE

METASYS SERVER LITE

The Application and Data Server (ADS) Lite-E is an optional component of the *Metasys*® system that manages the collection and presentation of large amounts of trend data, event messages, operator transactions, and system configuration data. As Site Director, the ADS-Lite-E provides secure communication to a network of Network Automation Engine (NAE) 35s, NAE45s, Network Control Engines (NCEs), and Network Integration Engines (NIEs). The ADS-Lite-E is available for purchase and use in Europe and Latin America. For more information on the NIE29, NIE39, and NIE49, contact Johnson Controls® Systems Integration Services (SIS).

The Site Management Portal UI of the ADS-Lite-E provides flexible system to change online configuration of the *Metasys* system, optimize control strategies, and perform administrative tasks. The ADS-Lite-E includes an Open Database Connectivity (ODBC) compliant database package for secure storage of historical and configuration data.

Note: In this document, the term engine refers to all supported NAE35s, NAE45s, NCEs, and NIE, unless otherwise noted. The ADS-Lite supports up to five engines in any combinations of NAE35, NAE45, NCE, or NIE29/39/49.

FEATURES

- Support of IT Standards and Internet Technologies
- Secure User Access
- Flexible System Navigation and Dynamic User Graphics
- Alarm and Event Management
- Long-Term Trend Data Storage

ORDERING INFORMATION

CODES *	DESCRIPTION
MS-ADSLE5U-0	ADS-Lite New project software for up to 5 users
MS-ADSLE5U-6	ADS-Lite Upgrade project software: for up to 5 users, on site with a previous version of the <i>Metasys</i> software
MS-ADS05U-8	ADS-Lite to full ADS Migration project software: for up to 5 users, on site migrating from a previous major release of ADS-Lite, to the current release of full ADS

Note

* Availability: The ADS-Lite is available for purchase and use in Europe, Africa and Latin America. Refer to *ADS Lite Product Bulletin (LIT-12011690)* for important product application information

TECHNICAL SPECIFICATIONS

Recommended Computer Platform ¹	<p>Intel i7 processor latest version with at least 4 cores or better 2 x 320 GB hard disk (RAID 1) ² with 40 GB free space after installation of all prerequisite software and before installation of ADS-Lite software. Configure RAID 1 (mirroring) with disk write-caching turned on.</p> <p>Note: Prerequisite software includes the supported operating system, database software, .NET Framework, and any other software or service packs required for your ADS configuration.</p> <p>Graphics adapter (1 GB RAM, ATI® Technologies or NVIDIA® Corporation, 64-bit compatible [for 64-bit operating systems], Small Form Factor [SFF] if required)</p>	
Required Minimum Memory	16 GB RAM minimum	
Supported Operating Systems ³ and Database Software	<p>Windows® 10 Pro and Enterprise Editions with Anniversary Update (version 1607 or later) (64-bit)</p> <p>Supports:</p> <p>SQL Server® 2016 Express with SP1 (64-bit) SQL Server® 2014 Express with SP2 (64-bit) SQL Server® 2012 Express with SP4 (64-bit) ⁴</p>	
	<p>Windows® 8.1 Pro and Enterprise Editions with Update 1 (64-bit)</p> <p>Supports:</p> <p>SQL Server® 2016 Express with SP1 (64-bit) SQL Server® 2014 Express with SP2 (64-bit) SQL Server® 2012 Express with SP4 (64-bit) ⁴</p>	
	<p>Windows® 7 Professional, Enterprise, and Ultimate Editions with SP1 (64-bit)</p> <p>Supports:</p> <p>SQL Server® 2014 Express with SP2 (64-bit) SQL Server® 2012 Express with SP4 (64-bit) ⁴</p>	
Supported Virtual Environments	Microsoft Hyper-V™ VMware®	
Supported User Interfaces	Site Management Portal (SMP) Metasys UI	
Additional Software Included with the ADS-Lite	CCT software	Launcher software
	Export Utility software	Metasys UI
	Metasys Database Manager software	SCT software
	Microsoft .NET Framework Version 4.6.1	
Optional Hardware	Any network or local printer supported by the qualified Windows operating system	
Optional Software	Graphic Generation Tool	

Notes

- ¹ Our computer platform and memory recommendations are not meant to imply that older or slower machines are not usable. Refer to the Network and IT Guidance Technical Bulletin (LIT-12011279) for more information regarding computer/server recommendations.
- ² For best performance, use Serial Attached SCSI (SAS) hard drives, not Small Computer System Interface (SCSI) hard drives.
- ³ Refer to the Network and IT Guidance Technical Bulletin (LIT-12011279) for specific Microsoft Windows operating system settings that may be required for your Metasys system configuration.
- ⁴ Microsoft SQL Server 2012 Express with SP3 is not an automatic Windows update. For more information, refer to <https://support.microsoft.com/en-us/kb/2979597>.

BUILDING AUTOMATION PRODUCTS

SUPERVISOR SOFTWARE AND TOOLS

METASYS® SOFTWARE

ADX / ADS

METASYS SERVER

The Application and Data Server (ADS) and Extended Application and Data Server (ADX) are optional components of the *Metasys*® system that manage the collection and presentation of large amounts of trend data, event messages, operator transactions, and system configuration data. The ADS is an entry-level server that runs on personal computers and supports up to five concurrent users. The ADX is a larger scale system that runs on a server operating system to provide extended historical archiving and reporting capabilities. The ADX is offered in several models to support up to 10, 25, 50, or 100 concurrent users. As Site Director, the ADS/ADX provides secure communication to a network of Network Automation Engines (NAEs), Network Control Engines (NCEs), and Network Integration Engines (NIEs).

Metasys Release 10.0 provides exciting new features and capabilities that continue to position the *Metasys* system as the leading building automation system in the industry, including:

- Building Network tree allows for faster delivery of the *Metasys* User Interface (UI) by enabling its deployment prior to the spaces and equipment configuration process. It also provides a familiar navigation experience for *Metasys* operators who have previous experience using the All Items tree of the Site Management Portal.
- Advanced Search and Reporting in the *Metasys* UI allows *Metasys* operators to find and report on operational data and make bulk commands to restore order more quickly. The Advanced Search and Reporting feature provides *Metasys* users the ability to quickly search *Metasys* objects by Building Network, equipment, equipment type, or space.
- Custom Dashboards for the *Metasys* User Interface. Custom Dashboard enable *Metasys* UI designers to create dashboards that provide the most relevant and critical information to *Metasys* operators for enhanced productivity and creates an experience that mimics users operational styles for ease of use.
- Graphics Custom Behaviors provide *Metasys* UI designers the flexibility to use custom symbols that are required for their individual building or campus needs or their local standards.
- Trend widget updates allow users to identify patterns including outliers, using an intuitive candlestick chart that displays min, max, and averages.

The Site Management Portal UI of the ADS/ADX provides flexible system to change online configuration of the *Metasys* system, optimize control strategies, and perform administrative tasks. The ADS/ADX includes an Open Database Connectivity (ODBC) compliant database package for secure storage of historical and configuration data.

The ADS and ADX support virtual environments, including VMware® and Microsoft® Hyper-V™.

Refer to the *Network and IT Guidance Technical Bulletin (LIT-12011279)* for more information.

The *Metasys* system can communicate with cloud-based applications easily and securely. To make this connection, the *Metasys* system requires minor programming and setup by Johnson Controls. When you are connected, you can access multiple cloud-based applications and features. To learn more, please visit the [Building Management](#) page located on the Johnson Controls® website.

FEATURES

- Support of IT Standards and Internet Technologies
- Secure User Access
- Flexible System Navigation and Dynamic User Graphics
- Alarm and Event Management
- Long-Term Trend Data Storage
- Optional *Metasys* Advanced Reporting System and Energy Essentials

APPLICATIONS

USE AN ADS WHEN:

- The number of network engines becomes larger than a single network engine can handle efficiently as Site Director
- Long-term historical data storage needs exceed the capacity of a typical network engine
- The number of simultaneous users logging in exceeds the capacity of a single network engine.
The ADS supports up to 5 simultaneous users, and up to 10 to 14 NxE engines.
Refer to the Metasys System Configuration Guide (LIT-12011832).

USE AN ADX WHEN:

- The *Metasys* Advanced Reporting System, Energy Essentials, or the *Metasys* for Validated Environments (MVE), Extended Architecture application is required
- You need to support more than 5 simultaneous users. The ADX supports up to 10, 25, 50, or 100 users, and up to 1,000 NxE engines. *Refer to the Metasys System Configuration Guide (LIT-12011832).*
- Any one of your data storage or access requirements is not met by an ADS

To further help you decide whether an ADS or ADX is right for your facility, consider their respective data storage and data access capabilities.

ORDERING INFORMATION

For complete ordering information, refer to the Metasys System Software purchase options Product Bulletin (LIT-12011703).

ADS SYSTEM REQUIREMENTS (5 USERS) - (PART 2/2)

Supported Web Browser Software for <i>Metasys</i> UI Client Devices	<p>Windows® Internet Explorer® 11.0.9600.18816 Update version 11.0.47 or later</p> <p>Notes:</p> <ul style="list-style-type: none"> • The <i>Metasys</i> UI does not support Internet Explorer 11 on Windows 10 operating systems. • In Internet Explorer 11, select the Use Microsoft compatibility lists option, found under Tools> Compatibility View Settings, to ensure that websites appear and function correctly. • <i>Metasys</i> UI does not support InPrivate Browsing. To exit InPrivate Browsing, close the browser window and open a new browser window. <p>Microsoft® Edge® version 41 or later Google® Chrome™ version 61 or later</p> <p>Note: <i>Metasys</i> UI does not support incognito mode. To exit incognito mode, click or tap the X icon of the browser window or tab and then open a new browser window or tab. For more information on incognito mode in Google Chrome, click here.</p> <p>Apple® Safari® 11 or later</p> <p>Note: <i>Metasys</i> UI does not support private browsing. To exit private browsing, click or tap Private in the browser window. Other web browsers, such as Mozilla® Firefox®, are not officially supported by the UI. However, the <i>Metasys</i> UI may appear and function appropriately in these web browsers.</p>
Supported Virtual Environments	Microsoft Hyper-V™ VMware®
Supported User Interfaces	Site Management Portal (SMP) <i>Metasys</i> UI
Additional Software Included with the ADS (one license per ADS license)	CCT software SCT software Export Utility software
Additional Software Included with the ADS Software Download	Launcher software, Network Engine images, Summary Definition Examples, Microsoft .NET Framework (multiple versions), SQL Server Management Studio, <i>Metasys</i> Database Manager, Toggletunnel, SNMP Management Information Base example files (MIBs), Report Viewer 2010 and Report Viewer 2012.
Optional Hardware	Any network or local printer supported by the qualified Windows operating system
Optional Software	Graphic Generation Tool

Notes

- 1 Our computer platform and memory recommendations are not meant to imply that older or slower machines are not usable. Refer to the *Network and IT Guidance Technical Bulletin (LIT-12011279)* for more information regarding computer/server recommendations.
- 2 For best performance, use Serial Attached SCSI (SAS) hard drives, not Small Computer System Interface (SCSI) hard drives.
- 3 For best performance, use the maximum amount of memory that the computer allows.
- 4 Refer to the *Network and IT Guidance Technical Bulletin (LIT-12011279)* for specific Microsoft Windows operating system settings that may be required for your *Metasys* system configuration.

TECHNICAL SPECIFICATIONS

EXTENDED ADS SYSTEM REQUIREMENTS (UNIFIED ADX SYSTEMS, 10 OR 25 USERS) - (PART 1/2)

Recommended Server Platform ¹	2.4 GHz Intel Xeon® 6 core single processor or better 2 x 600 GB hard disk (RAID 1) ² with 40 GB free space after installation of all prerequisite software and before installation of ADS software. Configure RAID 1 (mirroring) with disk write-caching turned on. DVD drive Note: ADX prerequisite software includes the Windows operating system, SQL Server software, Windows .NET Framework, and any other software or SPs required by your ADX configuration.
Required Minimum Memory ³	16 to 32 GB RAM
Supported Operating Systems ⁴ and Database Software	Windows® Server® 2016 (64-bit) Supports: • SQL Server® 2016 with SP1 (64-bit) • SQL Server® 2014 with SP2 (64-bit) • SQL Server® 2012 with SP3 (64-bit) Note: SQL Server 2012 Express with SP3 is not an automatic Windows update. For more information, refer to https://support.microsoft.com/en-us/kb/2979597 .
	Windows® Server® 2012 R2 with Update 1 (64-bit) Supports: • SQL Server® 2016 with SP1 (64-bit) • SQL Server® 2014 with SP2 (64-bit) • SQL Server® 2012 with SP3 (64-bit) Note: SQL Server 2012 Express with SP3 is not an automatic Windows update. For more information, refer to https://support.microsoft.com/en-us/kb/2979597 .
	Windows® Server® 2012 R2 with Update 1 (64-bit) Supports: • SQL Server® 2016 with SP1 (64-bit) • SQL Server® 2014 with SP2 (64-bit) • SQL Server® 2012 with SP3 (64-bit) Note: SQL Server 2012 Express with SP3 is not an automatic Windows update. For more information, refer to https://support.microsoft.com/en-us/kb/2979597 .
	Windows® Server® 2012 (64-bit) Supports: • SQL Server® 2016 with SP1 (64-bit) • SQL Server® 2014 with SP2 (64-bit) • SQL Server® 2012 with SP4 (64-bit) Note: SQL Server 2012 Express with SP3 is not an automatic Windows update. TECHNICAL SPECIFICATIONS

EXTENDED ADS SYSTEM REQUIREMENTS (SPLIT ADX SYSTEM, 50 OR 100 USERS) - (PART 2/3)

Optional Hardware	Any network or local printer supported by the qualified Windows operating system
Optional Software	Energy Essentials Graphic Generation Tool

Notes

- 1 Our computer platform and memory recommendations are not meant to imply that older or slower machines are not usable. Refer to the *Network and IT Guidance Technical Bulletin (LIT-12011279)* for more information regarding computer/server recommendations.
- 2 For best performance, use SAS hard drives (not SATA hard drives) that use RAID controllers with write caching enabled.
- 3 ADX prerequisite software includes the Windows operating system and SQL Server software, Windows .NET Framework, and any other software or service packs required for your ADX configuration.
- 4 For best performance, use the maximum amount of memory. An ADX with 32 GB RAM has much greater performance than an ADX with only 16 GB RAM.
- 5 The web/application and database servers must have the same operating system installed.
- 6 Refer to the *Network and IT Guidance Technical Bulletin (LIT-12011279)* for specific Microsoft Windows operating system settings that may be required for your Metasys system configuration.
- 7 SQL Server software is only included with the MS-ADX50SQL product.
For SQL Server software, you must purchase SQL Server software licenses per the guidelines listed here: [SQL Server 2016](#), [SQL Server 2014](#), and [SQL Server 2012](#).

BUILDING AUTOMATION PRODUCTS

SUPERVISOR SOFTWARE AND TOOLS

METASYS® SOFTWARE

MEU

METASYS EXPORT UTILITY

The *Metasys* system Export Utility makes it easy for a facility manager to efficiently manage daily operations. The Export Utility extracts historical trend, alarm, and audit data from the system and presents the historical data in a variety of formats. Using these flexible formats, in programs such as Microsoft® Excel® and Access®, you can easily sort, compare, and archive data in spreadsheets and databases.

Export Utility is a valuable tool for effective historical data analysis. You can determine how to use the data to perform time studies and root cause analyses of system changes and mechanical equipment failure.

The scheduling capability of Export Utility allows you to extract the selected data immediately, or to schedule an extraction at a convenient time or interval.

When the base set of reports provided with Export Utility is insufficient, functionality is included that allows you to create a program to customize reports that fit your needs.

Refer to the *Metasys Export Utility Product Bulletin (LIT-1201800)* for important product application information.

FEATURES

- Historical Data Retrieval
- Flexible Filtering of Historical Data
- Scheduled Collection of Historical Data
- Versatile Report Capabilities
- Custom Reporting
- Dynamic Link Library (DLL) Examples
- Historical Data Backup

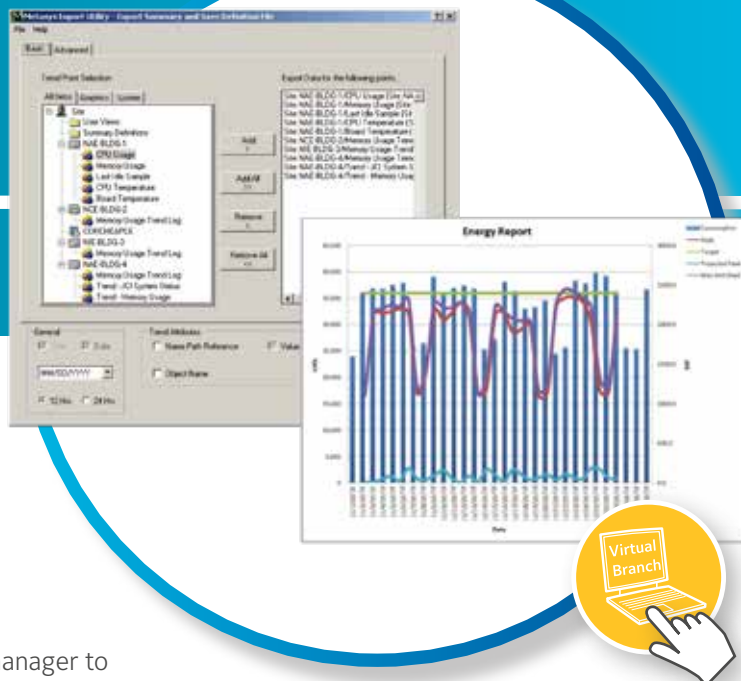

ORDERING INFORMATION

EXPORT UTILITY SELECTION CHARTS

CODES ¹	DESCRIPTION
MS-EXPORT-0	Export Utility new project software. Software and license for one computer (not per site).
MS-EXPORT-6	Export Utility upgrade software to current release version. Software and license for one computer (not per site).

Note

- 1** Export Utility software is sold separately from *Metasys* software. However, some *Metasys* software packages include Export Utility software. For more information on *Metasys* software packages, refer to the *Metasys System Software Purchase Options Product Bulletin (LIT-12011703)*.

TECHNICAL SPECIFICATIONS

EXPORT UTILITY SYSTEM REQUIREMENTS

Code	MS-EXPORT-0, MS-EXPORT-6
Required Computer/ Server Platform	<p>When Metasys Export Utility is installed on an Application and Data Server/Extended Application and Data Server (ADS/ADX) or Open Data Server (ODS), follow the requirements for an ADS/ADX or ODS. Refer to the <i>Application and Data Server (ADS) and Extended Application and Data Server (ADX) Product Bulletin (LIT-1201525)</i>, the <i>Application and Data Server (ADS) Lite-E Product Bulletin (LIT-12011690)</i>, the <i>Application and Data Server (ADS) Lite-A Product Bulletin (LIT-12011694)</i>, or the <i>Open Data Server Product Bulletin (LIT-12011943)</i>.</p> <p>Note: Our computer platform and memory recommendations are not meant to imply that older or slower machines are not usable. Refer to the <i>Metasys® System Configuration Guide (LIT-12011832)</i> for more information regarding computer/server recommendations.</p>
Recommended Memory	<p>Computer Platforms: 8 GB RAM Server Platforms: 16 GB RAM</p>
Supported Operating Systems	<p>Windows® 10 Pro and Enterprise Editions with Creators Update (version 1709) (64-bit) Windows® 8.1 Pro and Enterprise Editions with Update 1 (64-bit) Windows® 7 Professional, Enterprise, and Ultimate Editions with SP1 (64-bit) Windows® Server® 2016 (64-bit) Windows® Server® 2012 R2 with Update 1 (64-bit) Windows® Server® 2012 (64-bit)</p>
Additional Requirements (Order Separately)	<p>Microsoft Office Professional 2013, Microsoft Office Enterprise 365, Microsoft Office Professional 2010, or Microsoft Office Professional 2007 software to generate reports</p> <p>Notes:</p> <ul style="list-style-type: none"> To extract data to Microsoft Excel or Microsoft Access software, you must have the respective software installed on the computer running Metasys Export Utility. Metasys Export Utility can extract data to 32-bit and 64-bit versions of Microsoft Office. However, the DLL file and example files used to create custom reports are compatible only with 32-bit versions of Microsoft Office. Microsoft Office Professional 2013 and Microsoft Office 2010 do not support custom DLL files.
Additional Software Included on the Product Disks	<p>Microsoft .NET Framework version 3.5 SP1</p> <p>For steps on installing .NET Framework version 3.5 SP1, refer to the <i>Metasys® Server Installation and Upgrade Instructions Wizard (LIT-12012162)</i>, <i>ADS-Lite Installation and Upgrade Instructions Wizard (LIT-12011688)</i>, or the <i>ODS and SCT Installation and Upgrade Instructions Wizard (LIT-12011945)</i>.</p> <p>Note: Windows 10, Windows 8.1, Windows 7, Windows Server 2016, Windows Server 2012 R2, and Windows Server 2012 include Microsoft .NET Framework version 3.5/3.5.1.</p> <p>These applications are built into the operating system (no separate software installation is necessary). We recommend you also install Microsoft .NET Framework version 4.5 if you are using Windows 8.1, Windows Server 2012 R2, or Windows Server 2012 and Microsoft .NET Framework version 4.6.1 if you are using Windows 10.</p>
Additional requirements (Order separately)	<p>Microsoft Office Professional 2013, Microsoft Office Enterprise 365, Microsoft Office Professional 2007, Microsoft Office Professional 2010 software to generate reports</p> <p>Notes:</p> <ul style="list-style-type: none"> To extract data to Microsoft Excel or Microsoft Access software, you must have the Microsoft software installed on the computer that is running Export Utility. Export Utility can extract data to 32-bit and 64-bit versions of Microsoft Office. However, the dynamic-link library (DLL) file and example files used to create custom reports are compatible only with the 32-bit version of Microsoft Office.

BUILDING AUTOMATION PRODUCTS

SUPERVISOR SOFTWARE AND TOOLS

METASYS® SOFTWARE

SCT

SYSTEM CONFIGURATION TOOL

The System Configuration Tool (SCT) supports the engineering, installation, and commissioning of your building automation system. The SCT application enables fast offline generation and *Metasys* UI configuration of the complete site, including point naming; integration of N1, N2, BACnet®, and LonWorks® networks; integration of Modbus®, M-Bus, and KNX third-party protocols; integration of building systems such as C-CURE 9000 access control, victor video management, Simplex fire, and connected lighting systems from preferred vendors; integration of local and remote MS/TP devices; definition of tailored summaries and user views; and the creation of custom control logic using a graphical user interface.

SCT also manages the maintenance of the archive database for the Network Automation Engine (NAE), Network Control Engine (NCE), Network Integration Engine (NIE), Application and Data Server/Extended Application and Data Server (ADS/ADX), Open Data Server (ODS), and *Metasys*® User Interface (UI). To keep the archive database current, the user can set up the SCT to schedule regular uploads from the devices on the site. When the system is operational, you can make online changes to the database at the engine, ADS/ADX, or ODS with the same user interface that was used for the offline data generation in SCT.

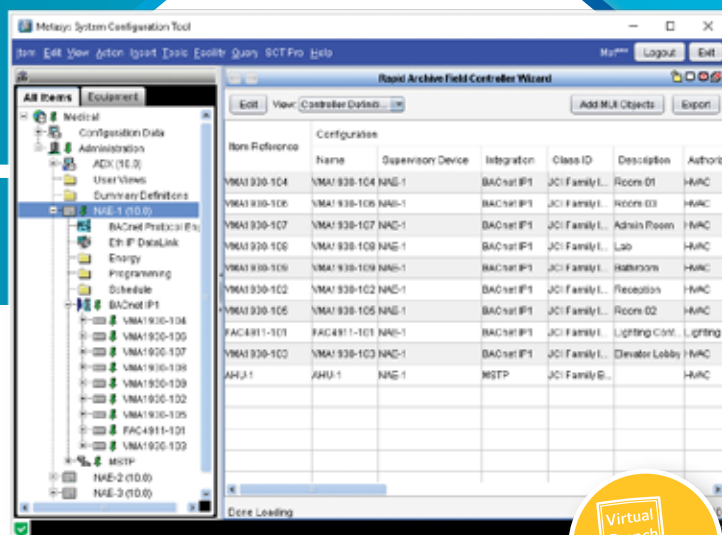

SCT offers productivity features, such as the mass creation of equipment, spaces, and serving relationships, and the migration of supervisory devices. You can also use SCT to fully manage a mixed release site for a *Metasys* system at Release 5.2 or later.

SCT has a one-click installation. The new SCT installer installs the required software prerequisites, such as Internet Information Services (IIS), SQL Server® 2014 Express software (if no SQL Server present), and Microsoft® .NET Framework 4.6.1. The new SCT installers also include two additional applications. You can use the *Metasys* UI Offline software to configure *Metasys* UI graphics and the display of data without a live connection to devices. SCT Pro is a web application that significantly streamlines some SCT workflows, and greatly simplifies tasks such as scheduling recurring backups, upgrading sites, and site discovery. For example, with site discovery, you can rebuild the entire archive database from the online system. This is a useful option if the original archive is missing, corrupt, or was never maintained.

IT SECURITY COMMITMENT

Metasys uses secure HTTP with Transport Layer Security (TLS) 1.2 between the SCT computer, all *Metasys* servers, and network engines that are upgraded to *Metasys* Release 9.0 and later. The encrypted HTTPS communications apply to the ADS, ADX, ODS, *Metasys* UI, network engines, and SCT. This ensures that unauthorized users and computer hackers cannot view the contents of communications sent between *Metasys* equipment. By default, self-signed certificates are installed on supported products, with the option of configuring trusted certificates configured by an internal IT department or a Certificate Authority. To indicate the active security level (trusted, self-signed, or untrusted), three small security shield icons appear on the SCT login screens and on the SCT UI screens.

Johnson Controls continues to enhance the security of *Metasys* with the addition of signed resource files, and the pairing of supervisory devices with the site director to ensure encrypted communication.

FEATURES

- **Forced Change of Default Password** – Provides improved security by forcing default passwords to be changed as part of the workflow when interacting with NxEs.
- **Signed Resource Files** – Provides improved security to identify resource files that are created by Johnson Controls, and to check that they have not been modified.
- **Site Director Pairing** – Provides improved security in the communication between supervisory devices and site directors through use of a unique password for each pairing.
- **New Archive Wizard** – Provides interface improvements to display useful information and perform common operations with fewer clicks.
- **Enable/Disable and Deferred Switchover** – Provides more control over the start-up of an application in a field controller that has 8.0 and above firmware, which includes the new field controllers released with *Metasys* 10.0.
- **Improved Rapid Archive Creation** – Provides several enhancements including the creation of controller templates and equipment definitions in one step, support for third-party devices, and the ability to create *Metasys* UI spaces and equipment information for existing devices.
- **Mass Relabeling** – Provides a more efficient process to update labels and descriptions for devices, equipment, equipment definitions, spaces, and controller templates.
- **Supervisory Device Migration** – Provides support to easily accommodate the upgrade of supervisory device hardware.
- **Rapid Archive Features** – Provides new sites a quick and simplified way to configure archives from a Rapid Archive Schedule spreadsheet. You can also use the feature to easily configure *Metasys* UI spaces and equipment for existing sites.
- **Simplified Building System Integrations** – Provides an automated integration process for systems through an updated Mass Change Tool utility and the Rapid Archive feature.
- **Streamlined One-Click Installer** – Provides a faster and more convenient method for tool installation.
- **Certificate Management** – Provides privacy with built-in certificate management options to regulate trusted certificates for network engines from SCT.
- **Auto-Discovery Serving Relationships through Equipment Discovery** – Provides existing sites with faster *Metasys* UI and navigation tree configuration.
- **Drag and Drop Functionality** – Provides the ability to enable mass creation of spaces and equipment relationships.
- **Security Database and *Metasys* UI Spaces and Equipment in Manage Archive Options** – Provides improved upload and download of supervisory devices and optional download of spaces and equipment.
- **User Definable Attribute IDs and Child Item Field Syntax for Summary Definitions** – Provides advanced system searching capabilities.
- **Tailored Summary Definition Templates** – Provides the ability to quickly view, mass copy, edit, or delete any extensions on points or devices.

FEATURES

- **Integrated Trunk Utilities with Parameter Sheets** – Provides the ability to transfer CAFs between controllers and the SCT system through NxE Passthru, Direct Ethernet, or MAP 4.2 and later Router connections. In addition to the file transfer options, the feature also supports viewing and editing device parameters per field controller trunk.
- **Controller and Equipment Template Master Files** – Provides a comprehensive list of common points to easily generate and tailor specific equipment definitions for the equipment creation process.
- **Expanded Field Controller Support** – Provides the integration and support for the IP field controllers released with *Metasys* 9.0.

ORDERING INFORMATION

CODES	DESCRIPTION
TL-SCT-0	System Configuration Tool Software for local installations. New project software for sites that do not have a previous version of SCT installed.
TL-SCT-6	System Configuration Tool Software for local installations. Upgrade software for previous SCT versions being upgraded to the latest release.

Note

The SCT software and Trunk Utility features require license activation at Release 13.0. SCT and Field Controller packages can be licensed using the Software Activation Manager (SAM) installed through the SCT installation wizard.

For more information on software licensing, refer to the Software Activation Manager Help (LIT-12012389).

SCT - METASYS® SOFTWARE

TECHNICAL SPECIFICATIONS

For instances where the SCT is installed on the same computer as the ADS/ADX software, *refer to the specifications in the Application and Data Server (ADS/ADX) Product Bulletin (LIT-1201525)*. For applications where the SCT is installed on an ODS, *refer to the specifications in the Open Data Server (ODS) Product Bulletin (LIT-12011943)*.

Note: Refer to the Network and IT Guidance for the BAS Professional Technical Bulletin (LIT-1201279) for specific Microsoft Windows OS settings that may be required for your Metasys system configuration.

Note: For information on licensing Microsoft SQL Server, refer to the Microsoft SQL Server Licensing Guide for the edition of Microsoft SQL Server that you install.

SCT SYSTEM REQUIREMENTS (PART 1/2)

Codes	TL-SCT-0	New project software
	TL-SCT-6	Upgrade software
Recommended Platform	Full Server Platform	Intel® Core™ 2 Duo E6700 or better (Intel Core 2 Duo E4300 minimum) 20 GB minimum free hard disk space available. Use a Solid State Drive (SSD) to significantly improve performance compared to other types of hard disks. 16 GB RAM (4 GB RAM minimum)
	Desktop Computer Platform	Intel Core 2 Duo E6700 or better (Intel Core 2 Duo E4300 minimum) 20 GB minimum free hard disk space available. Use a Solid State Drive (SSD) to significantly improve performance compared to other types of hard disks. 16 GB RAM (4 GB RAM minimum)
Supported Operating Systems and Database Software	Full Server Platforms	Windows Server 2016 Supports Microsoft SQL Server 2016 with SP1 (64-bit), Microsoft SQL Server 2014 with SP2 (64-bit), or SQL Server 2012 with SP3 (64-bit)
		Windows Server 2012 R2 with Update 1 Supports Microsoft SQL Server 2016 with SP1 (64-bit), Microsoft SQL Server 2014 with SP2 (64-bit), or SQL Server 2012 with SP4 (64-bit)
		Windows Server 2012 Supports Microsoft SQL Server 2016 with SP1 (64-bit), Microsoft SQL Server 2014 with SP2 (64-bit), or SQL Server 2012 with SP4 (64-bit)
Supported operating systems and database software ^{1, 3}	Desktop Computer Platforms	Windows® 10 Professional or Enterprise (64-bit) with Creators Update (version 1709) Supports Microsoft SQL Server 2016 Express with SP1 (64-bit), Microsoft SQL Server 2014 Express with SP2 (64-bit), or SQL Server 2012 Express with SP4 (64-bit) Note: The Windows 10 Creators Update (version 1709) is required for any Windows 10 computer that runs Metasys 10.0 software, including the ADS, ADX, ODS, and any Metasys software application. Verify this update before installing Metasys 10.0 software. If you are upgrading to Metasys Release 10.0 and do not have this update, you must uninstall the previous release of all Metasys software, apply the Windows 10 Creators Update (version 1709), then proceed with the Metasys 10.0 upgrade.
		Windows 8.1 Pro and Windows 8.1 Enterprise Editions with Update 1 Supports Microsoft SQL Server 2016 Express with SP1 (64-bit), Microsoft SQL Server 2014 Express with SP2 (64-bit), or SQL Server 2012 Express with SP4 (64-bit)
		Windows 7 Professional, Enterprise, and Ultimate Editions with SP1 (64-bit) Supports Microsoft SQL Server 2016 Express with SP1 (64-bit), Microsoft SQL Server 2014 Express with SP2 (64-bit), or SQL Server 2012 Express with SP4 (64-bit)

METASYS® SOFTWARE

VMD

GENERATOR EXPRESS

VMD Generator Express (VGE) is software designed to support the creation of the Vendor Model Definition (VMD) files, used by the Modbus® RTU and TCP integration on NAE (Metasys 10.0+) & NIE9 for third party integrations platform.

VMD Generator Express supplies a user friendly user's interface to create, modify and view VMD files.

VMD Generator Express incorporates a version tracking system, storing user, date/time and comment, every time a VMD is saved (created or modified).

VMD Generator Express allows creating generic models for standard integrations, like meters, chillers, AHU, to optimize the engineering time and follow standardization approach.

FEATURES

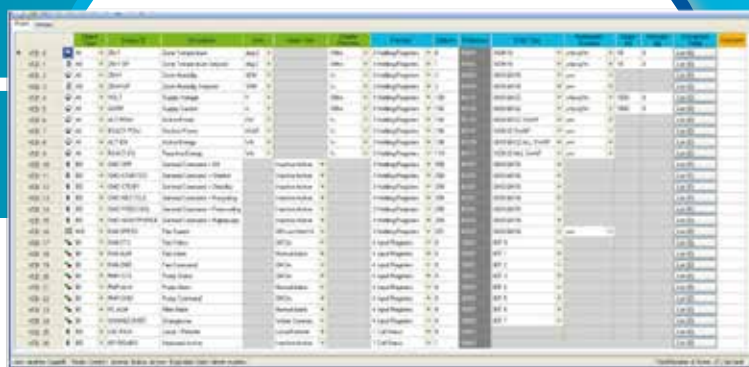

- User friendly UI
- Version Tracking
- User Target Behaviour
- Excel string Import
- Model / Standardization
- Points List Export

ORDERING INFORMATION

CODES	DESCRIPTION
TL-NIE-DVD	VMD Generator Express software. It does not include the license

Note

The usage of the VMD Generator Express Tool requires a certification, which is achieved by attending a training course. For more information please contact your local technical support team.

SUPERVISOR SOFTWARE AND TOOLS

METASYS® SOFTWARE

CCT

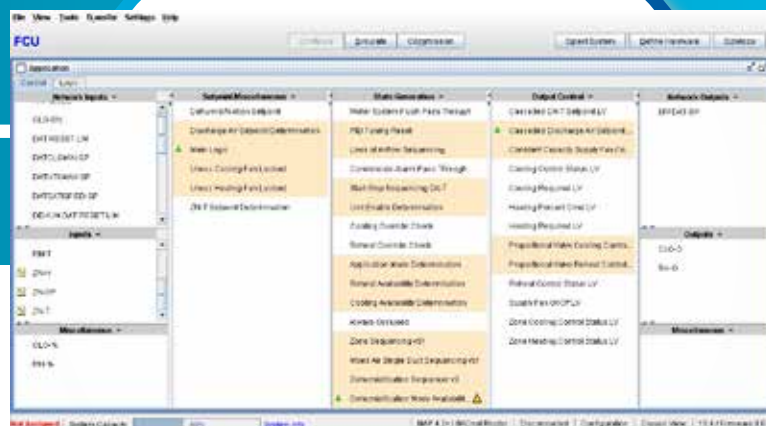

CONTROLLER CONFIGURATION TOOL

You can use the Controller Configuration Tool (CCT) to configure, simulate, commission, and transfer application files to the following controllers on an MS/TP bus:

- Advanced Application Field Equipment Controllers (FACs)
- Advanced Application Programmable Controllers (PCAs)
- Expansion Input/Output Modules (PCXs)
- Field Equipment Controllers (FECs)
- General Purpose Application Controllers (CGMs)
- General Purpose Programmable Controllers (PCGs)
- Input/Output Modules (IOMs)
- Programmable Variable Air Volume Box Controllers (PCVs)
- Variable Air Volume Controllers (VAVs)
- Variable Air Volume Modular Assembly Controllers (VMAs)
- Variable Air Volume Terminal Equipment Controllers (CVMs)

CCT operates in the following three modes that provide key functionality for your system:

- You can use the **Configuration** mode to select a wide variety of mechanical and control logic options through system selection trees for typical air handling, terminal unit, central plant, and VAV box mechanical systems. When required, you can customize the standard logic provided by the system selection process to meet your specialized control logic requirements.
- You can use the **Simulation** mode to review the application logic as if you were commissioning the system. You can make adjustments to setpoints, inputs, or sensors during a simulation session to validate the logic before assigning the configuration to a specific controller. A simulation debugging console is also available to setup break points that pause the simulation session based on criteria that you set up. While viewing a simulation session, transitions taking place in the logic are highlighted for a few seconds to help you quickly identify where the changes occur.
- You can use the Commissioning mode to connect to a device and view actual data from that device. You can use this mode to monitor your device and set Offsets, COVs, and Polarity in addition to other parameter and detail changes. For VAV applications, CCT includes an optional box flow test to automatically exercise all the VAV boxes to ensure correct mechanical installation and proper configuration of the key flow setup parameters. The ZFR Checkout Tool (ZCT) is available to validate the wireless connectivity and health of your wireless mesh network. *Refer to the ZFR Checkout Tool Help (LIT-12012292) for details.* Controller Application Files (CAFs) can be transferred and commissioned to a device through a wide variety of connection interfaces including: NxE Passthru, MAP 4.2+ /BACnet® router, ZigBee® and Direct Ethernet.

CCT - METASYS® SOFTWARE

CCT AND FIELD CONTROLLER PACKAGE LICENSING

CCT software and field controller package files require license activation at Release 13.0. You can license CCT and field controller packages using the Software Activation Manager (SAM), which is installed through the CCT installation wizard. *For more information on software licensing, refer to the Software Activation Manager Help (LIT-12012389).*

Field controller package files are bundled separately at this release. You can use the licensing infrastructure to download package files, and the Package Importer wizard to install them.

For information on CCT and field controller package licensing, and on how to install field controller package files, refer to the CCT Installation Instructions (LIT-12011529).

CCT AND FX-PCT

CCT and the Facility Explorer® Programmable Controller Tool (FX-PCT) are no longer separate software tools. Users of CCT and FX-PCT at Release 10.2 must first uninstall the previous version before installing 13.0. Users of CCT and FX-PCT software at Release 10.3 can upgrade directly to Release 13.0.

For information on how to upgrade to or install CCT, refer to the CCT Installation Instructions (LIT-12011529).

FEATURES

- **FSM Explorer** – Provides a new way of viewing the Finite State Machine (FSM) in Configuration, Simulation and Commissioning mode.
- **New CAF Workflow** – Helps you pick the correct Release Mode for your application.
- **Transfer to Device (Download) Enhancements** – Enables you to control when to activate transferred files on a controller and enable and disable the logic of applications in a device.
- **Online Library** – Enables you to download, publish and share CAF files, Controller Templates, Equipment Definitions and CCT Modules. This feature is only available to Technician licensed users.
- **Support for SA Bus Provisioning** – Provides the ability to update the firmware of all devices attached on the Sensor/Actuator Bus. You can check the status of SA Bus devices in the Transfer Wizard.
- **BBMD Functionality** – Provides you with the ability to configure IP controllers with BACnet Broadcast Management Device (BBMD) enabled.
- **N2 Application Transfer** – Facilitates the transfer of N2 applications to N2 capable devices without requiring explicit communication switching.

CENTRAL PLANT OPTIMIZATION™

Johnson Controls has combined expertise from designing YORK® chillers and *Metasys* controls to bring the best world-class program to operate your chiller plant. The result is Johnson Controls Central Plant Optimization™ 10, which saves energy and improves reliability in your facility. A facility's central chiller plant uses a significant portion of the HVAC energy, typically 35%. Managing this load, while still maintaining occupant comfort is a primary strategy for overall energy management.

CPO10, which is powered by the *Metasys* system, provides such a strategy. The *Metasys* CPO10 application uses field-proven, factory-tested and fully documented best practices to select the most efficient combination of chillers, pumps, heat exchangers and cooling towers needed to match the building load. The application then commands the selected devices to the appropriate state or speed, providing the necessary sequencing of pumps, isolation valves and main equipment, while observing all the timing delays for safe and stable operation of the central chiller plant.

FEATURES

- **Advanced Control Algorithms** – Evaluate all possible combinations of devices considering capacities, efficiencies, runtimes, and number of starts resulting in the most efficient operating state rather than simply selecting the next available device as the building load increases.
- **Total Automation of All Equipment** – Provides proper sequencing of all devices in a safe and stable fashion.
- **Simulation Mode Application Preview** – Allows you to test a newly generated program prior to downloading the program to the field controllers.
- **Optional Integration of Third-Party Equipment** – Provides additional energy savings.
- **Control Sequences Created by the System Selection Tool (SST) within Controller Configuration Tool (CCT)** – Allow you to select from tens of thousands of possible equipment combinations, piping configurations, and control strategies, each resulting in the automatic creation of a software program using proven best practices.
- **CCT Editor Allowing Customization of Individual Components of the Program Created Using SST** – Addresses special situations that cannot be described in SST and easily customizes the program, without the need to build the entire program from scratch.

APPLICATION SUPPORTS

- Up to eight chillers, centrifugal (mix of constant or variable speed), screw, reciprocating or scroll compressor of mixed sizes, piped in parallel
- Up to eight primary chilled water pumps of mixed sizes, all dedicated or headered and all constant or variable speed
- Up to eight secondary chilled water pumps that are mixed in size, are piped in parallel and are variable speed
- Up to eight condenser water pumps that are mixed in size, all dedicated or headered and all constant or variable speed
- Up to four heat exchangers of mixed sizes, piped in parallel
- Up to eight cooling towers piped in common to the chillers, are single speed (with optional vernier control), multispeed or variable speed with a variety of tower/sump valve arrangements
- A non-integrated waterside economizer able to control up to eight total devices (chillers and heat exchangers) piped in parallel
- Air-cooled chillers

The CPO10 application offers a variety of primary control strategies including measuring building chilled-water flow and differential temperature, the chillers' kW load and flow through a decoupler pipe in a primary/secondary system, or differential temperature only in a constant speed chilled water pump system. You can also select dozens of secondary strategies, such as open loop control of the cooling towers (as defined by the American Society of Heating, Refrigerating and Air-Conditioning Engineers [ASHRAE]) or closed loop control of condenser-water setpoint.

The CPO10 application supports 24 sequences through any combination of the following chilled water systems and condenser water systems:

CHILLED WATER SYSTEMS

- Variable Primary Headered
- Variable Primary Dedicated
- Primary Secondary Headered
- Primary Secondary Dedicated
- Constant Headered

CONDENSER WATER SYSTEMS

- Constant Dedicated
- Variable Headered
- Variable Dedicated
- Constant Headered

BUILDING AUTOMATION PRODUCTS

SUPERVISORY AND NETWORK CONTROLLERS

METASYS® NETWORK ENGINE

NAE

NETWORK AUTOMATION ENGINE

The *Metasys*® network engines perform a key role in the *Metasys* system architecture. These network engines provide network management and system-wide control coordination over one or more networks of equipment controllers, including the following *Metasys* field controllers:

- General Purpose Application MS/TP Controllers (CGMs)
- VAV Box Equipment MS/TP Controllers (CVMs)
- Field Equipment Controllers (FECs) and Advanced Application Field Equipment Controllers (FACs)
- Terminal Equipment Controllers (TECs)
- Legacy *Metasys* controllers, such as Unitary (UNT) controllers, Variable Air Volume Assembly (VMA14xx) controllers, and DX-9100 controllers
- Third-party equipment controllers

The network engines can be networked together for scaling up on large projects, and they can be networked with an Application and Data Server (ADS) or an Extended Application and Data Server (ADX) for additional functionality and site unification.

Network engines provide building control scheduling, alarm and event management, energy management, data exchange, historical data storage and management, and custom control logic. Network engines include an embedded user interface called the Site Management Portal (SMP). Users access the SMP for system navigation and operation using web browser connections. Network engines are secured from unauthorized access using password protection and permission access control as well as IT security best practices.

In addition to providing general comprehensive equipment monitoring and control, network engines also offer specialized capabilities by series, model, and software release to meet a variety of application requirements. The network engines are identified by three types:

SMALL-CAPACITY ENGINES

- Network Automation Engines: NAE35 and NAE45
- Network Control Engine: NCE25
- Network Integration Engines: NIE29, NIE39, and NIE49

NAE – METASYS® NETWORK ENGINE

LARGE-CAPACITY ENGINES

- Network Automation Engine: NAE55
- Network Integration Engines: NIE55 and NIE59

SOFTWARE-ONLY ENGINES

- Network Automation Engine: NAE85
- Network Integration Engine: NIE85 and NIE89

NAEs provide network supervisor capabilities and IP network connectivity. NCEs also provide network supervisor capabilities and IP network connectivity, but also feature the I/O point connectivity and direct digital control capabilities of an FEC. NIEs are variants of NAEs and NCEs that include legacy and third-party device integration capabilities.

FEATURES

NETWORK ENGINES

The features and benefits below are applicable to all network engines, with specific features varying by model and software release.

- **Supervision of controller networks including Johnson Controls and third-party protocol devices –** Supports connectivity to open network standards for complete flexibility in the selection of field devices. Supported protocols are model and software release dependent. They include BACnet MS/TP, BACnet/IP, LonWorks, N2 Bus, Modbus® RTU, Modbus TCP, M-Bus (EN 13757-3) serial and IP, KNX IP, and other third-party protocols. Prior to *Metasys* system Release 9.0.7, the Network Integration Engines (NIEs) provided the Modbus, M-Bus, and KNX integrations. At Releases 9.0.7 and 10.0, these third-party integrations are included with all NAEs.
- **Communication using commonly accepted IT standards at the automation and enterprise level –** Allows you to install a system on your existing IT infrastructure within a building or enterprise and use standard IT communication services over the company intranet, WAN, public Internet with VPN tunnel and firewall protection. Network engines also support the ability to optionally authenticate non-local users through a Remote Authentication Dialin User Services (RADIUS) server and Syslog Destination Delivery Agent (DDA) for network logging of *Metasys* audits and events.
- **Secure web-based user interface –** Allows you to access system data in the network engines from any supported web browser device connected to the network, including remote users connected by dial-up telephone or an Internet Service Provider (ISP). All upgraded network engines have self-signed certificates that provide for encrypted communication. Optionally, you can deploy trusted certificates to network engines. The customer's IT department or a Certificate Authority (CA) can provide trusted certificates.
- **Site Director function –** Allows you to access all data on one site through one device. The device that is designated as the Site Director coordinates the display of data from multiple devices for easy navigation through the entire site. This capability is available to all network engine models.
- **Embedded user interface and online system configuration software –** Lets you enable, configure, commission, archive data, monitor, command, and perform system diagnosis from any device by using a web browser, without the need for separate workstation software.

FEATURES

NETWORK ENGINES

- **Internet connection for data access** – Allows connection of a web browser through the IP network using the Ethernet port.
- **Embedded Site Management Portal system configuration software** – Gives you password-protected access to system configuration, monitoring, commanding, diagnosis, and a cloud-based application from any device with web browser software without the need for separate workstation software.
- **No hardware to replace** – Upgrade from a Microsoft® Windows® Embedded operating system to a version of the Linux operating system using a simple network download (Releases 9.0.7 and 10.0 only). Switching to Linux reassures customers that the underlying OS of their network engines supports future security updates.

NETWORK CONTROL ENGINES

The features and benefits below are specific to Network Control Engines (NCEs):

- **Integral field controller with 33 I/O Points** – Provides field-level control of central plant and large air-handler applications combined with enterprise level IP network connectivity.
- **Expandable I/O point capacity, NS sensor connectivity, and VFD control on field controller SA Bus** – Allow you to connect multiple Input/Output Modules (IOMs), NS Series Network Sensors, and VFDs to the field controller SA Bus, greatly expanding the NCE's field level control capabilities.

ORDERING INFORMATION

NCE25 (RELEASES 9.0 AND 9.0.7 ONLY)

CODES	RELEASE	DESCRIPTION
MS-NCE25xx-x (Base Features on Each NCE25)	N/A	Each NCE25 Series model requires a 24 VAC power supply and includes one RS-232-C serial port, one RS-485 optically isolated SA Bus port, one USB serial port, one Ethernet port, and an MSBAT1020-0 Data Protection Battery. Each NCE25 Series model has 33 integral I/O points and supports up to 128 additional I/O points on the SA Bus. Supports BACnet IP network.
MS-NCE2500-0	9.0.7	Base features with no physical field controller trunk connection.
MS-NCE2506-0	9.0.7	Base features with no physical field controller trunk connection. Includes integral display screen.
MS-NCE2510-0	9.0.7	Supports two third-party trunks (Modbus® RTU or TCP, M-Bus, or KNX) and one N2 Bus. The number of supported devices on the third-party trunk depends on the protocol. For the N2 Bus, up to 32 devices are supported.
MS-NCE2511-0	9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one N2 Bus. The number of supported devices on the third-party trunk depends on the protocol. For the N2 Bus, up to 32 devices are supported. Includes internal modem. Note: Modem functions are no longer available after this engine is updated with <i>Metasys</i> Release 9.0.7 or later.
MS-NCE2516-0	9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one N2 Bus. The number of supported devices on the third-party trunk depends on the protocol. For the N2 Bus, up to 32 devices are supported. Includes integral display screen.
MS-NCE2517-0	9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one N2 Bus. The number of supported devices on the third-party trunk depends on the protocol. For the N2 Bus, up to 32 devices are supported. Includes integral display screen and internal modem. Note: Modem functions are no longer available after this engine is updated with <i>Metasys</i> Release 9.0.7 or later.
MS-NCE2520-0	9.0	Supports one LonWorks trunk with up to 32 LonWorks devices.
MS-NCE2521-0	9.0	Supports one LonWorks trunk with up to 32 LonWorks devices. Includes internal modem.
MS-NCE2526-0	9.0	Supports one LonWorks trunk with up to 32 LonWorks devices. Includes integral display screen.
MS-NCE2527-0	9.0	Supports one LonWorks trunk with up to 32 LonWorks devices. Includes integral display screen and internal modem.
MS-NCE2560-0	9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one MS/TP Bus. The number of supported devices on the third-party trunk depends on the protocol. For the MS/TP bus, up to 32 devices are supported.
MS-NCE2561-0	9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one MS/TP Bus. The number of supported devices on the third-party trunk depends on the protocol. For the MS/TP bus, up to 32 devices are supported. Includes internal modem. Note: Modem functions are no longer available after this engine is updated with <i>Metasys</i> Release 9.0.7 or later.
MS-NCE2566-0	9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one MS/TP Bus. The number of supported devices on the third-party trunk depends on the protocol. For the MS/TP bus, up to 32 devices are supported. Includes integral display screen.
MS-NCE2567-0	9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one MS/TP Bus. The number of supported devices on the third-party trunk depends on the protocol. For the MS/TP bus, up to 32 devices are supported. Includes integral display screen and internal modem. Note: Modem functions are no longer available after this engine is updated with <i>Metasys</i> Release 9.0.7 or later.

ORDERING INFORMATION

NCE25 ACCESSORIES

CODES	DESCRIPTION
MS-BAT1020-0	Replacement data protection battery for NAE35, NAE45, and NCE25. Rechargeable NiMH battery: 3.6 V 500 mAh, with a typical life of 5 to 7 years at 21°C.
TL-MAP1810-xx	Pocket-sized web server that provides a wireless mobile user interface to Metasys field controllers, thermostats, and smart rooftop units. <i>Refer to the Mobile Access Portal Gateway Catalog Page (LIT-1900869) to identify the appropriate product for your region.</i> Note: The MAP Gateway serves as a replacement for the BTCVT, which is no longer available but continues to be supported.
MS-DIS1710-0	Local Controller Display connects to NCE on SA Bus and provides menu display and navigation keypad for monitoring status and controlling parameters on the NCE's integral field controller. Note: A DIS1710 display does not operate on NCE models that have an integral controller display.
MS-EXPORT-0	License enabling Metasys Export Utility software for new installation. Software may be obtained by electronic download from the Licensing Portal or by ordering a DVD copy.

NAE35 (RELEASE 9.0 OR 9.0.7 ONLY) (PART 1/2)

CODES	RELEASE	DESCRIPTION
MS-NAE35xx-x (Base Features of Each NAE35)	N/A	NAE35 Network Automation Engines: Requires a 24 VAC power supply. Each model includes one RS-232-C serial port, one USB serial port, one Ethernet port, and an MS-BAT1020-0 Data Protection Battery. Supports a BACnet IP network.
MS-NAE3510-2	9.0.7	Supports two third-party trunks (Modbus® RTU or TCP, M-Bus, or KNX) and one N2 Bus or BACnet MS/TP (RS-485) trunk. The number of supported devices on the third-party trunk depends on the protocol. For the N2 Bus or MS/TP trunk, up to 50 devices are supported. Note: Modem functions are no longer available after this engine is updated with Metasys Release 9.0.7 or later.
MS-NAE3511-2	9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one N2 Bus or BACnet MS/TP (RS-485) trunk. The number of supported devices on the third-party trunk depends on the protocol. For the N2 Bus or MS/TP trunk, up to 50 devices are supported. Includes internal modem. Note: Modem functions are no longer available after this engine is updated with Metasys Release 9.0.7 or later.
MS-NAE3514-2	9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one N2 Bus or BACnet MS/TP (RS-485) trunk. The number of supported devices on the third-party trunk depends on the protocol. For the N2 Bus or MS/TP trunk, up to 50 devices are supported. Engine is limited to Basic Access support. Note: Modem functions are no longer available after this engine is updated with Metasys Release 9.0.7 or later.
MS-NAE3515-2	9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one N2 Bus or BACnet MS/TP (RS-485) trunk. The number of supported devices on the third-party trunk depends on the protocol. For the N2 Bus or MS/TP trunk, up to 50 devices are supported. Engine is limited to Basic Access support; includes internal modem. Note: Modem functions are no longer available after this engine is updated with Metasys Release 9.0.7 or later.

NAE35 (RELEASE 9.0 OR 9.0.7 ONLY) (PART 2/2)

CODES	RELEASE	DESCRIPTION
MS-NAE3520-2	9.0	Supports one LonWorks trunk; includes an additional RS-232-C serial port for optional external modem. Supports a maximum of 64 devices on the LonWorks port.
MS-NAE3521-2	9.0	Supports one LonWorks trunk; includes an internal modem. Supports a maximum of 64 devices on the LonWorks port.
MS-NAE3524-2	9.0	Supports one LonWorks trunk; limited to Basic Access support; and includes an additional RS-232-C serial port for optional external modem. Supports a maximum of 64 devices on the LonWorks trunks.
MS-NAE3525-2	9.0	Supports one LonWorks trunk; limited to Basic Access support; and includes an internal modem. Supports a maximum of 64 devices on the LonWorks trunks.

NAE55-2 (RELEASE 5.2 OR 8.1 ONLY)

CODES	RELEASE	DESCRIPTION
MS-NAE55xx-x (Base Features of Each NAE55)	N/A	NAE55 Network Automation Engines: Requires a 24 VAC power supply. Each model includes two RS-232-C serial ports, two USB serial ports, two RS-485 ports, one Ethernet port, and one MS-BAT1010-0 Data Protection Battery. Supports a BACnet IP network.

NAE55-3 (RELEASE 8.1 OR 10.0 ONLY) (PART 1/2)

CODES	RELEASE	DESCRIPTION
MS-NAE55xx-x (Base Features of Each NAE55)	N/A	NAE55 Network Automation Engines: Requires a 24 VAC power supply. Each model includes two RS-232-C serial ports, two USB serial ports, two RS-485 ports, one Ethernet port, and one MS-BAT1010-0 Data Protection Battery. Supports a BACnet IP network.
MS-NAE5510-3E	10.0	Supports two third-party trunks (Modbus® RTU or TCP, M-Bus, or KNX) and two N2 or two BACnet MS/TP (RS-485) trunks (or one N2 trunk and one BACnet MS/TP trunk). Supports up to 100 devices on each N2 or BACnet MS/TP trunk. This model is a BACnet BTL-Listed controller at Protocol Revision 15 (PR15).
MS-NAE5511-3E	10.0	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and two N2 or two BACnet MS/TP (RS-485) trunks (or one N2 trunk and one BACnet MS/TP trunk); includes an internal modem. Supports up to 100 devices on each N2 or BACnet MS/TP trunk. This model is a BACnet BTL-Listed controller at Protocol Revision 15 (PR15). Note: Modem functions are no longer available after this engine is updated with Metasys Release 10.0 or later.
MS-NAE5511-3E	10.0	Supports a LonWorks trunk, two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX), or two N2 trunks/BACnet MS/TP (RS-485) trunks (or one N2 trunk and one BACnet MS/TP trunk). Supports up to 255 devices on the LonWorks trunk. Supports up to 100 devices on each N2 or BACnet MS/TP trunk. This model is a BACnet BTL-Listed controller at Protocol Revision 15 (PR15).
MS-NAE5520-3E	10.0	Supports a LonWorks trunk, two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX), or two N2 trunks/BACnet MS/TP (RS-485) trunks (or one N2 trunk and one BACnet MS/TP trunk); includes an internal modem. Supports up to 255 devices on the LonWorks trunk. Supports up to 100 devices on each N2 or BACnet MS/TP trunk. This model is a BACnet BTL-Listed controller at Protocol Revision 15 (PR15). Note: Modem functions are no longer available after this engine is updated with Metasys Release 10.0 or later.

NIE29 (RELEASE 9.0 OR 9.0.7 ONLY)

CODES	RELEASE	DESCRIPTION
MS-NIE29xx-x (base features on each NIE29)	N/A	Each NIE29 Series model requires a 24 VAC power supply and includes one RS-232-C serial port, one USB serial port, one SA Bus port, one RS-485 or LON port, one Ethernet port, and an MS-BAT1020-0 Data Protection Battery. Each NIE29 Series model supports 33 hard-wired Input/Output points. Up to two ports can be defined for third-party integration. The other ports have to be defined in order to use standard protocols (N2, BACnet MS/TP, or LON). Supports BACnet/IP network.
MS-NIE2910-0	9.0 » 9.0.7	Supports two third-party trunks (Modbus® RTU or TCP, M-Bus, or KNX) and one N2 Bus. The number of supported devices on the third-party trunk depends on the protocol. For the N2 Bus, up to 32 devices are supported.
MS-NIE2916-0	9.0 » 9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one N2 Bus. The number of supported devices on the third-party trunk depends on the protocol. For the N2 Bus, up to 32 devices are supported. Includes integral display screen.
MS-NIE2920-0	9.0	only Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX), and one LonWorks trunk. The number of supported devices on the third-party trunk depends on the protocol. For the N2 Bus, up to 32 devices are supported. For the LonWorks trunk, up to 32 devices are supported. This product does not support the 9.0.7 upgrade.
MS-NIE2926-0	9.0 only	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX), and one LonWorks network trunk. The number of supported devices on the third-party trunk depends on the protocol. For the LonWorks trunk, up to 32 devices are supported. Includes integral display screen. This product does not support the 9.0.7 upgrade.
MS-NIE2960-0	9.0 » 9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one BACnet MS/TP (RS-485) trunk. The number of supported devices on the third-party trunk depends on the protocol. For the BACnet MS/TP trunk, up to 32 devices are supported.
MS-NIE2966-0	9.0 » 9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one BACnet MS/TP (RS-485) trunk. The number of supported devices on the third-party trunk depends on the protocol. For the BACnet MS/TP trunk, up to 32 devices are supported. Includes integral display screen.

ORDERING INFORMATION

NIE39 (RELEASE 9.0 OR 9.0.7 ONLY)

CODES	RELEASE	DESCRIPTION
MS-NIE39xx-x (Base Features of Each NIE39)	N/A	Each NIE39 Series model requires a 24 VAC power supply. Each model includes two RS-232-C serial ports, one USB serial port, one RS-485 or LON port, one Ethernet port, and an MSBAT1020- 0 Data Protection Battery. Up to two ports can be defined for third-party integration. The other ports have to be defined in order to use standard protocols (N2, BACnet MS/TP, or LON). Supports BACnet/IP network.
MS-NIE3910-2	9.0 » 9.0.7	Supports two third-party trunks (Modbus® RTU or TCP, M-Bus, or KNX) and one N2 Bus or one BACnet MS/TP (RS-485) trunk. The number of supported devices on the third-party trunk depends on the protocol. For the N2 Bus or BACnet MS/TP trunk, up to 50 devices are supported.
MS-NIE3920-2	9.0 only	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one LonWorks trunk. The number of supported devices on the third-party trunk depends on the protocol. For the LonWorks trunk, up to 64 devices are supported. This product does not support the 9.0.7 upgrade.

NIE49 (RELEASE 9.0 OR 9.0.7 ONLY)

CODES	RELEASE	DESCRIPTION
MS-NIE49xx-x (Base features of each NIE49)	N/A	Each NIE49 Series model requires a 24 VAC power supply. Each model includes two RS-232-C serial ports, one USB serial port, one RS-485 or LON port, one Ethernet port, and an MSBAT1020- 0 Data Protection Battery. Up to two ports can be defined for third-party integration. The other ports have to be defined in order to use standard protocols (N2, BACnet MS/TP, or LON). Supports BACnet/IP network.
MS-NIE4910-2	9.0 » 9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one N2 Bus or one BACnet MS/TP (RS-485) trunk. The number of supported devices on the third-party trunk depends on the protocol. For the N2 Bus or BACnet MS/TP trunk, up to 100 devices are supported.
MS-NIE4920-2	9.0 only	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one LonWorks trunk. The number of supported devices on the third-party trunk depends on the protocol. For the LonWORKS trunk, up to 127 devices are supported. This product does not support the 9.0.7 upgrade.

NIE59-3 (FIELD UPGRADEABLE TO RELEASE 10.0 ONLY)

CODES	RELEASE	DESCRIPTION
MS-NIE59xx-3 (Base Features of Each NIE59)	N/A	Each NIE59-3 Series model requires a 24 VAC power supply. Each model includes two RS-232-C serial ports, two USB serial ports, two RS-485 ports, one Ethernet port, and one MSBAT1010- 0 Data Protection Battery. Supports up to 100 devices on each N2 or BACnetMS/TP trunk and up to 100 devices on the integration trunk. Up to two ports can be defined for third-party integration. The other ports have to be defined in order to use standard protocols (N2, BACnet MS/TP, or LON). Supports BACnet IP network.
MS-NIE5960-3	10.0	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and two N2 or BACnet MS/TP (RS-485) trunks. The number of supported devices depends on third-party protocol. For the N2 or BACnet MS/TP (RS-485) trunk, up to 100 devices are supported.
MS-NIE5920-3	10.0	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX), two N2 or BACnet MS/TP (RS-485) trunks, and one LonWorks Network trunk. The number of supported devices depends on protocol. For each N2 or BACnet MS/TP (RS-485) trunk, up to 100 devices are supported. For the LonWorks trunk, up to 255 devices are supported.

ORDERING INFORMATION

ACCESSORIES

NIEX9

CODES	DESCRIPTION
MS-BAT1010-0	Replacement data protection battery for NAE55 and NIE59. Rechargeable gel cell battery: 12 V, 1.2 Ah, with a typical life of three to five years at 21°C
MS-BAT1020-0	Replacement data protection battery for NAE35, NIE39, NAE45, NIE45, NIE49, NCE25, or NIE29. Rechargeable NiMH 3.6 VDC, 500 mAh battery with a typical life of five to seven years at 21°C. (Higher operating temperatures reduce battery life).

Modbus®

CODE	DESCRIPTION
IU-9100-8401	RS232-to-RS485 converter, 230 VAC
IU-9100-8404	RS232-to-RS485 converter, 24 VAC

M-BUS

CODES	DESCRIPTION
SIS-MBUSSCSL-OE	RS232-to-M-Bus level converter for up to 6 unit loads; 24 VAC/VDC
SIS-MBUSSCLL-OE	RS232-to-M-Bus level converter for up to 100 unit loads; 24 VAC/VDC
SIS-MBUSRPLL-OE	RS232-to-M-Bus level repeater for up to 100 unit loads; 24 VAC/VDC
SIS-MBUSRPLH-OE	RS232-to-M-Bus level repeater for up to 100 unit loads; 230 VAC
SIS-MBUSNCLL-OE	IP-to-M-Bus level converter for up to 100 unit loads; 24 VAC/VDC
SIS-MBUSNCLH-OE	IP-to-M-Bus level converter for up to 100 unit loads; 230 VAC
INT-DX-KAB01	Optional connection cable SUB-D to RJ-12 for use with SIS-MBUSSCLL-OE

KNX

CODES	DESCRIPTION
SIS-KNXNIXL-OE	KNX IP interface module to connect KNX line through Ethernet to an NIEx9
SIS-KNXNRXL-OE	KNX IP router to connect KNX line through Ethernet to an NIEx9, including line or area coupler functionality

VGE TOOL TRAINING

CODE	DESCRIPTION
PTK-CONT-26	VGE Tool Software Software Training. The VGE tool is required to generate custom Modbus mapping tables for the NIE.

TECHNICAL SPECIFICATIONS

NCE25 (PART 1/2)

Power Requirement	Dedicated nominal 24 VAC, SELV power supply, at 50/60 Hz (20 VAC minimum to 30 VAC maximum)
Power Consumption	25 VA maximum for NCE25 only Note: The 25 VA rating does not include any power supplied by the NCE to devices connected at the NCE BOs. BO devices connected to and powered by an NCE can require an additional 125 VA (maximum).
Power Source	+15 VDC power source terminals provide 100 mA total current; quantity of inputs: five, located in Universal IN terminals; for active (3-wire) input devices
Ambient Operating Conditions	0 to 50°C, 10 to 90% RH, 30°C maximum dew point
Ambient Storage Conditions	-40 to 70°C, 5 to 95% RH, 30°C maximum dew point
Data Protection Battery	Supports data protection on power failure. Rechargeable NiMH battery: 3.6 VDC 500 mAh, with a typical life of 5 to 7 years at 21°C; Product Code Number: MS-BAT1020-0
Processors	
<i>Supervisory Controller</i>	192 MHz Renesas SH4 7760 RISC processor
<i>Field Controller</i>	20 MHz Renesas H8S2398 processor
Memory	
<i>Supervisory Controller</i>	128 MB flash nonvolatile memory for operating system, configuration data, and operations data storage and backup and 128 MB SDRAM for operations data dynamic memory
<i>Field Controller</i>	1 MB flash memory and 1 MB RAM
Operating System	Microsoft Windows Embedded CE 6.0 (Release 9.0) Buildroot 2017.08.2 with Linux kernel 14.4 (Release 9.0.7 patch)
Network and Serial Interfaces (Depending on NCE model)	<ul style="list-style-type: none"> • One Ethernet port; 10/100 Mbps; 8-pin RJ-45 connector • One optically isolated RS-485 SA Bus port; with a pluggable and keyed 4-position terminal block (on all NCE25 models) • One optically isolated RS-485 port; with a pluggable and keyed 4-position terminal block (only on NCE25 models that support an N2 Bus or MS/TP bus trunk) • One LonWorks port; FTT10 78 Kbps; pluggable, keyed 3-position terminal block (only on NCE25 models that support a LonWorks Network trunk). The LonWorks models are supported to run the Metasys Release 9.0 software, but not the Release 9.0.7 patch update. • One RS-232-C serial port with standard 9-pin sub-D connector that supports standard baud rates • One USB serial port with standard USB connector that supports an optional, user-supplied external modem. Modem functions are available with Metasys Release 9.0, but are not available after the NAE is patched with Release 9.0.7. • Option: One telephone port for internal modem; up to 56 Kbps; 6-pin modular connector (NAE models with an optional internal modem have one RS-232-C serial port only; not supported for engine with Release 9.0.7.)
Analog Input/Analog Output Point Resolution	<ul style="list-style-type: none"> • Analog Input Points: 16-bit resolution • Analog Output Points: 16-bit resolution and ± 200 mV accuracy on 0-10 VDC applications
Input/Output Capabilities	<ul style="list-style-type: none"> • 10-Universal Inputs: Defined as 0-10 VDC, 4-20mA, 0-600k ohm, or Binary Dry Contact • 8-Binary Inputs: Defined as Dry Contact Maintained or Pulse/ Accumulator Mode • 4-Analog Outputs: Defined as 0-10 VDC or 4-20mA • 7-Binary Outputs: Defined as 24 VAC Triac (selectable internal or external source power) • 4-Configurable Outputs: Defined as 0-10 VDC or 24 VAC Triac BO

TECHNICAL SPECIFICATIONS

NCE25 (PART 2/2)

Dimensions (Height x Width x Depth)	155 x 270 x 64 mm, minimum mounting space required: 250 x 370 x 110 mm
Housing	Plastic housing Plastic material: ABS and polycarbonate Protection: IP20 (IEC60529)
Mounting	On flat surface with screws, on three mounting clips, or a single 35 mm DIN rail
Shipping Weight	1.2 kg
 Compliance BACnet International	Johnson Controls declares that this product is in compliance with the essential requirements and other relevant provisions of the EMC Directive.
	BTL 135-2012 Listed B-BC, Protocol Revision 12

NAE35 AND NAE45 (PART 1/2)

Power Requirement	Dedicated nominal 24 VAC, SELV power supply, at 50/60 Hz (20 VAC minimum to 30 VAC maximum)
Power Consumption	25 VA maximum
Ambient Operating Conditions	0 to 50°C; 10 to 90% RH, 30°C maximum dew point
Ambient Storage Conditions	-40 to 70°C; 5 to 95% RH, 30°C maximum dew point
Data Protection Battery	Supports data protection on power failure. Rechargeable NiMH battery: 3.6 VDC 500 mAh, with a typical life of 5 to 7 years at 21°C; Product Code Number: MS-BAT1020-0
Processor	192 MHz Renesas SH4 7760 RISC processor
Memory	128 MB flash nonvolatile memory for operating system, configuration data, and operations data storage and backup 128 MB SDRAM for operations data dynamic memory
Operating System	Microsoft Windows Embedded CE 6.0 (Release 9.0) Buildroot 2017.08.2 with Linux kernel 14.4 (Release 9.0.7 patch)
Network and Serial Interfaces	<ul style="list-style-type: none"> • One Ethernet port; connects at 10 or 100 Mbps; 8-pin RJ-45 connector • One optically isolated RS-485 port; 9.6k, 19.2k, 38.4k, or 76.8k baud (depending on protocol); with a pluggable and keyed 4-position terminal block (FC Bus available on NAE351x and NAE451x models only) • One LonWorks port; FTT10 78 Kbps; pluggable, keyed 3-position terminal block (LonWorks port available on NAE352x-x and NAE452x models only). The LonWorks models are supported to run the Metasys Release 9.0 software, but not the Release 9.0.7 patch update. • One RS-232-C serial port with standard 9-pin sub-D connector that supports standard baud rates. • Second serial port, on models without an internal modem, that supports an optional, user-supplied external modem. Modem functions are available with Metasys Release 9.0, but are not available after the NAE is patched with Release 9.0.7. • One USB serial port with standard USB connector that supports an optional, user-supplied external modem. Modem functions are available with Metasys Release 9.0, but are not available after the NAE is patched with Release 9.0.7. • Option: One telephone port for internal modem; up to 56 Kbps; 6-pin modular connector (NAE models with an optional internal modem have one RS-232-C serial port only; not supported for engine with Release 9.0.7.)

NXE85/LCS85 SOFTWARE SYSTEM RECOMMENDATIONS FOR INSTALLATION/UPGRADE

Codes	<i>MS-NXE85SW-0</i>	Network Integration Engine Software for 10,000 objects (new projects only software, Release 10.0)
	<i>MS-LCS85SW-0</i>	Network Integration Engine Software for 10,000 objects (new projects only software, Release 10.0)
Recommended Computer Platform	Intel Xeon E5506, 2.13 GHz, 4 MB Cache 2 x 160 GB 7.2K SATA, 8.9 cm (3.5 in.) Cabled 3 Gbps, RAID 1 configuration with add-in SAS6/iR (SATA/SAS Controller)	
Recommended Memory	8 GB RAM minimum	
Hard Disk	160 GB minimum	
Supported 64-bit Operating Systems and Software	<ul style="list-style-type: none"> • Windows® Server® 2016 (64-bit) • Windows® Server® 2012 R2 with Update 1 (64-bit) • Windows® Server® 2012 (64-bit) Note: Microsoft .NET Framework 3.5 Service Pack (SP) 1 and Microsoft .NET Framework 4.6.1 are required for any of the operating systems.	
Supported Operating Systems for Metasys Client Computers	<ul style="list-style-type: none"> • Windows® 10 Pro and Enterprise Editions with Anniversary Update (version 1607) (64-bit) • Windows® 8.1 Pro and Enterprise Editions with Update 1 (64-bit) • Windows® 7 Professional, Enterprise, and Ultimate Editions with SP1 (64-bit) • Apple® macOS® 10.12 Sierra • Apple® OS X® 10.11 El Capitan Note: Apple operating systems are supported for Metasys client computers only. Also, in Apple OS X, you cannot view Graphics+ graphics in the Site Management Portal UI.	
Internal Optical Drive	DVD ROM, SATA	
Supported Web Browser Software for Metasys Site Management Portal Client Computers	Windows® Internet Explorer® 11.0.9600.18816 Update version 11.0.47 or later Note: In Internet Explorer 11, select the Use Microsoft compatibility lists option, found under Tools > Compatibility View Settings , to ensure that websites appear and function correctly. Google® Chrome™ version 61 or later Apple® Safari® 11 or later Other browsers, such as Mozilla® Firefox®, may also be used but are not fully supported.	
Supported Virtual Environments	Microsoft Hyper-V™, VMWare®	
Network Communication	Selectable Network Interface (if computer has multiple network cards, during Nx85/LCS85 installation, select the network card that was configured for Metasys system use before installation) Ethernet network interface card 10/100/1000 Mbps (100 Mbps or better recommended)	
Recommended Data Protection	Uninterruptible power supply (UPS) Smart-UPS SC 450VA, 280 W, 120 VAC input/output, NEMA 5-15R output connections, OEM Part No. SC450RM1U	

SUPERVISORY AND NETWORK CONTROLLERS

METASYS®
NETWORK ENGINE

NIEx9 FOR THIRD-PARTY INTEGRATIONS

NETWORK INTEGRATION ENGINES (NIEx9S) FOR THIRD-PARTY INTEGRATIONS

Network Integration Engines (NIEx9s) for third-party integrations enable IP connectivity and webbased access to *Metasys* Building Management Systems (BMSs).

NIEx9s integrate standard building management communication technologies, including BACnet® MS/TP, BACnet/IP, N2 Bus, Modbus®, M-Bus (EN 13757-3), KNX, and third-party proprietary protocols to monitor and supervise a wide variety of HVAC, lighting, security, fire, electrical and thermal measuring, and access control equipment. For third-party integrations, one NIEx9 can support two Modbus integrations, two M-Bus integrations, a combination of one Modbus and one M-Bus, or a single KNX integration. The NIEx9 comes from the factory with these three integrations pre-installed and pre-licensed, ready for your use.

NIEx9s provide comprehensive equipment monitoring and control, scheduling, alarm and event management, energy management, data exchange, data trending, and data storage.

NIEx9s feature an embedded Site Management Portal (SMP) UI, support multiple concurrent web browser sessions with password and permission access control, and provide the protection of industry-standard IT security.

The NIE29 models enable compact and combined solutions including supervisory and control capacity. They can be used in smaller facilities where an all-in-one (supervisory, control, and integration) platform is required.

The NIE39/NIE49 models enable cost-effective NIEx9 connectivity and control in smaller facilities, and can extend NIEx9 supervisory functions in larger facilities.

LonWorks® versions of the NIE29s, NIE39s, and NIE49s are not supported at Release 9.0.7. These models will remain at Release 9.0. In addition, the NIE59 and NIE89 models are no longer available at Release 9.0.7. The functionality provided by these models is now available with the NAE55 and NAE85 at Release 10.0, respectively.

For details, refer to the Network Engine Product Bulletin (LIT-12012138).

A tool called the VMD Generator Express (VGE) tool is available to create Vendor Model Definition (VMD) tables for specific third-party equipment using Modbus protocol.

FEATURES

- **Communication Using Commonly Accepted IT Standards at the Automation and Enterprise Level -** Provides the ability to install a system on your existing IT infrastructure within a building or enterprise and use standard IT communication services over the company intranet, WAN, or public internet with firewall protection.
- **Web-Based User Interface -** Provides the ability to access system data in the NIEx9s from any supported web browsing device connected to the network, including remote users connected by dial-up telephone or an ISP.
- **Support for Web Services at the Automation Network Level -** Provides the ability to develop facility-specific advanced data interfaces and applications.
- **Embedded Site Management Portal System Configuration Software -** Provides you with password-protected access to system configuration, monitoring, commanding, diagnosis, and cloud-based applications from any device with web browser software without the need for separate workstation software.
- **Improved Security with New Operating System -** Provides a higher level of protection from threats with the adoption of the Linux Buildroot operating system, a full replacement of the recently expired Windows CE operating system.
- **Supervision of Controller Networks Including BACnet MS/TP, BACnet/IP, N2 Bus, LonWorks, Modbus® RTU, Modbus TCP, M-Bus (EN 13757-3) serial and IP, KNX IP, and third-party protocol devices -** Supports connectivity to open network standards for complete flexibility in the selection of field devices. The LonWorks NIE29, NIE39, and NIE49 models are not supported at Release 9.0.7.
- **Support for Dual Trunks -** Significantly improves the flexibility and extends the investment of integrations to thirdparty equipment. The dual trunk feature potentially reduces the number of NIEx9s required on a project and allows you to add integrations to existing NIEx9s that are at Release 7.0 and later. You can more easily adapt to the requirements of projects that have fewer devices that require integration but use separate networks and different protocols.

NIEx9 FOR THIRD-PARTY INTEGRATIONS – METASYS®

ORDERING INFORMATION

NIE29 (RELEASE 9.0 OR 9.0.7 ONLY)

CODES	RELEASE	DESCRIPTION
MS-NIE29xx-x (base features on each NIE29)	N/A	Each NIE29 Series model requires a 24 VAC power supply and includes one RS-232-C serial port, one USB serial port, one SA Bus port, one RS-485 or LON port, one Ethernet port, and an MS-BAT1020-0 Data Protection Battery. Each NIE29 Series model supports 33 hard-wired Input/Output points. Up to two ports can be defined for third-party integration. The other ports have to be defined in order to use standard protocols (N2, BACnet MS/TP, or LON). Supports BACnet/IP network.
MS-NIE2910-0	9.0 » 9.0.7	Supports two third-party trunks (Modbus® RTU or TCP, M-Bus, or KNX) and one N2 Bus. The number of supported devices on the third-party trunk depends on the protocol. For the N2 Bus, up to 32 devices are supported.
MS-NIE2916-0	9.0 » 9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one N2 Bus. The number of supported devices on the third-party trunk depends on the protocol. For the N2 Bus, up to 32 devices are supported. Includes integral display screen.
MS-NIE2920-0	9.0 only	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX), and one LonWorks trunk. The number of supported devices on the third-party trunk depends on the protocol. For the N2 Bus, up to 32 devices are supported. For the LonWorks trunk, up to 32 devices are supported. This product does not support the 9.0.7 upgrade.
MS-NIE2926-0	9.0 only	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX), and one LonWorks network trunk. The number of supported devices on the third-party trunk depends on the protocol. For the LonWorks trunk, up to 32 devices are supported. Includes integral display screen. This product does not support the 9.0.7 upgrade.
MS-NIE2960-0	9.0 » 9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one BACnet MS/TP (RS-485) trunk. The number of supported devices on the third-party trunk depends on the protocol. For the BACnet MS/TP trunk, up to 32 devices are supported.
MS-NIE2966-0	9.0 » 9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one BACnet MS/TP (RS-485) trunk. The number of supported devices on the third-party trunk depends on the protocol. For the BACnet MS/TP trunk, up to 32 devices are supported. Includes integral display screen.

NIE39 (RELEASE 9.0 OR 9.0.7 ONLY)

CODES	RELEASE	DESCRIPTION
MS-NIE39xx-x (Base Features of Each NIE39)	N/A	Each NIE39 Series model requires a 24 VAC power supply. Each model includes two RS-232-C serial ports, one USB serial port, one RS-485 or LON port, one Ethernet port, and an MSBAT1020-0 Data Protection Battery. Up to two ports can be defined for third-party integration. The other ports have to be defined in order to use standard protocols (N2, BACnet MS/TP, or LON). Supports BACnet/IP network.
MS-NIE3910-2	9.0 » 9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one N2 Bus or one BACnet MS/TP (RS-485) trunk. The number of supported devices on the third-party trunk depends on the protocol. For the N2 Bus or BACnet MS/TP trunk, up to 50 devices are supported.
MS-NIE3920-2	9.0 only	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one LonWorks trunk. The number of supported devices on the third-party trunk depends on the protocol. For the LonWorks trunk, up to 64 devices are supported. This product does not support the 9.0.7 upgrade.

CODES	DESCRIPTION
IU-9100-8401	RS232-to-RS485 converter, 230 VAC
IU-9100-8404	RS232-to-RS485 converter, 24 VAC

NIE49 (RELEASE 9.0 OR 9.0.7 ONLY)

CODES	RELEASE	DESCRIPTION
MS-NIE49xx-x (Base features of each NIE49)	N/A	Each NIE49 Series model requires a 24 VAC power supply. Each model includes two RS-232-C serial ports, one USB serial port, one RS-485 or LON port, one Ethernet port, and an MSBAT1020-0 Data Protection Battery. Up to two ports can be defined for third-party integration. The other ports have to be defined in order to use standard protocols (N2, BACnet MS/TP, or LON). Supports BACnet/IP network.
MS-NIE4910-2	9.0 » 9.0.7	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one N2 Bus or one BACnet MS/TP (RS-485) trunk. The number of supported devices on the third-party trunk depends on the protocol. For the N2 Bus or BACnet MS/TP trunk, up to 100 devices are supported.
MS-NIE4920-2	9.0 only	Supports two third-party trunks (Modbus RTU or TCP, M-Bus, or KNX) and one LonWorks trunk. The number of supported devices on the third-party trunk depends on the protocol. For the LonWORKS trunk, up to 127 devices are supported. This product does not support the 9.0.7 upgrade.

NIEX9 ACCESSORIES

CODES	DESCRIPTION
MS-BAT1010-0	Replacement data protection battery for NAE55 and NIE59. Rechargeable gel cell battery: 12 V, 1.2 Ah, with a typical life of three to five years at 21°C.
MS-BAT1020-0	Replacement data protection battery for NAE35, NIE39, NAE45, NIE45, NIE49, NCE25, or NIE29. Rechargeable NiMH 3.6 VDC, 500 mAh battery with a typical life of five to seven years at 21°C. (Higher operating temperatures reduce battery life.)

ORDERING INFORMATION

ACCESSORIES

M-BUS

CODES	DESCRIPTION
SIS-MBUSSCSL-OE	RS232-to-M-Bus level converter for up to 6 unit loads; 24 VAC/VDC
SIS-MBUSSCLL-OE	RS232-to-M-Bus level converter for up to 100 unit loads; 24 VAC/VDC
SIS-MBUSRPLL-OE	RS232-to-M-Bus level repeater for up to 100 unit loads; 24 VAC/VDC
SIS-MBUSRPLH-OE	RS232-to-M-Bus level repeater for up to 100 unit loads; 230 VAC
SIS-MBUSNCLL-OE	IP-to-M-Bus level converter for up to 100 unit loads; 24 VAC/VDC
SIS-MBUSNCLH-OE	IP-to-M-Bus level converter for up to 100 unit loads; 230 VAC
INT-DX-KAB01	Optional connection cable SUB-D to RJ-12 for use with SIS-MBUSSCLL-OE

KNX

CODES	DESCRIPTION
SIS-KNXNIXL-OE	KNX IP interface module to connect KNX line through Ethernet to an NIEx9
SIS-KNXNRXL-OE	KNX IP router to connect KNX line through Ethernet to an NIEx9, including line or area coupler functionality

VGE TOOL TRAINING

CODE	DESCRIPTION
PTK-CONT-26	VGE Tool Software Software Training. The VGE tool is required to generate custom Modbus mapping tables for the NIE.

TECHNICAL SPECIFICATIONS

NIE29 (PART 1/2)

Power Requirement	SELV power supply, at 50/60 Hz (20 VAC minimum to 30 VAC maximum)	
Power Consumption	25 VA maximum for NCE25 only The 25 VA rating does not include any power supplied to devices connected at the NIE BOs. Binary output devices connected to and powered by an NIE can require an additional 125 VA (maximum).	
Power Source	+15 VDC power source terminals provide 100 mA total current; quantity of inputs: five, located in Universal IN terminals; for active (3-wire) input devices	
Ambient Operating Conditions	0 to 50°C; 10 to 90% RH, 30°C maximum dew point	
Ambient Storage Conditions	-40 to 70°C; 5 to 95% RH, 30°C maximum dew point	
Data Protection Battery	Supports data protection on power failure. Rechargeable NiMH battery: 3.6 VDC 500 mAh, with a typical life of 5 to 7 years at 21°C; Product Code Number: MS-BAT1020-0	
Processors		
<i>Supervisory Controller</i>	192 MHz Renesas SH4 7760 RISC processor	
<i>Field Controller</i>	20 MHz Renesas H8S2398 processor	
Memory		
<i>Supervisory Controller</i>	128 MB flash nonvolatile memory for operating system, configuration data, and operations data storage and backup and 128 MB SDRAM for operations data dynamic memory	
<i>Field Controller</i>	1 MB flash and 1 MB RAM	
Operating System	Microsoft Windows Embedded CE 6.0 (Release 9.0) Buildroot 2017.08.2 with Linux kernel 14.4 (Release 9.0.7 patch)	
Network and Serial Interfaces	MS-NIE291x-0 (MS/TP) or MSNIE296x-0 (N2) Release 9.0.7: <ul style="list-style-type: none"> • One Ethernet port: 10/100 Mbps; 8-pin RJ-45 connector • One optically isolated RS-485 FC Bus port or N2 Bus port; with a pluggable and keyed 4-position terminal block • One optically isolated RS-485 SA Bus port; with a pluggable and keyed 4-position terminal block • One RS-232-C serial port: standard 9-pin sub-D connectors, that support all standard baud rates • One USB serial port: not used for engine at Release 9.0.7 	MS-NIE292x-0 (LON) Release 9.0 only, not 9.0.7: <ul style="list-style-type: none"> • One Ethernet port: 10/100 Mbps; 8-pin RJ-45 connector • One optically isolated RS-485 SA Bus port; with a pluggable and keyed 4-position terminal block • One RS-232-C serial port: standard 9-pin sub-D connectors, that support all standard baud rates • One USB serial port: standard USB connector to support an optional, user-supplied external modem • One LonWorks port; FTT10 78 Kbps; pluggable, keyed 3-position terminal block
Analog Input/Analog Output Resolution and Accuracy	Analog Input Points: 16-bit resolution Analog Output Points: 16-bit resolution and +200 mV accuracy on 0-10 VDC applications	
Dimensions (Height x Width x Depth)	155 x 270 x 64 mm Minimum mounting space required: 250 x 370 x 110 mm	
Housing	Plastic housing Plastic material: ABS and polycarbonate Protection: IP20 (IEC60529)

BUILDING AUTOMATION PRODUCTS

SUPERVISORY AND NETWORK CONTROLLERS

METASYS®
NETWORK ENGINE

NxE TO NIE MIGRATION KIT

NETWORK INTEGRATION ENGINE

The Nx E to NIE Migration kit provides the tools and licenses to convert an existing NAE or NCE into an NIE. This allows you to take a standard NCE or NAE device and add the integration capabilities.

The NIE migration can be applied to an Nx E from release 4.1 or later.

All standard NIE's being shipped can only be used with *Metasys* release 7.0 or higher. It is not possible to downgrade a new NIE to an earlier version of *Metasys*. If you would like to install an NIE on an existing site that cannot be upgraded to the latest version of *Metasys* this solution can be used to create an NIE with *Metasys* release 4.1 or later.

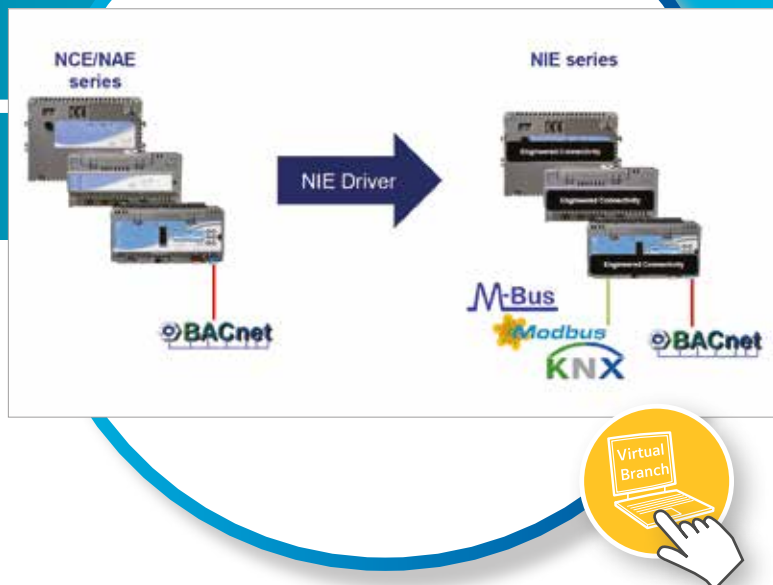

Note: This kit is not required if upgrading an existing NAE to *Metasys* release 10.0 or later.

FEATURES

- Add an NIE at required *Metasys* release to existing site that cannot be upgraded to release 7.0 or later
- To add 3rd party integration capabilities to an existing Nx E
- Avoid the need to upgrade from ADS-Lite to ADS when integrations are required. Integrations can be added to existing engine to remain within the limit for ADS-Lite

BENEFITS

- To be more competitive with our integration solutions
- Provide flexible integration solutions to the market
- Reduce installation costs, eliminates the need to replace the engine to add integration

ORDERING INFORMATION

CODE	DESCRIPTION
SIS-NIEX9LIC-OE	NxE to NIE Migration kit. Includes NIE license and 'Engineered Connectivity' sticker to identify migrated device

TOOLS

ITEM	DESCRIPTION
VMD Generator Express Tool	The VMD Generator Express Tool is required to manage the creation of the 3 rd party integrations on the NIE platform. The usage of the VMD Generator Express Tool requires a certification, which is achieved by attending a training course. <i>For more information please contact your local Technical Support Team.</i>

BUILDING AUTOMATION PRODUCTS

PROGRAMMABLE CONTROLLERS METASYS® CONTROLLERS

FEC

FIELD EQUIPMENT CONTROLLERS

The Field Equipment Controller (FEC) Series products are programmable controllers that can be switched between BACnet® MS/TP and N2 communications protocols. When they are used as BACnet MS/TP devices, they are BACnet Application Specific Controllers (B-ASCs) with integral MS/TP communications. In N2 mode, they can be used to modernize sites with legacy Johnson Controls® controllers. FECs feature 32-bit microprocessor architecture, patented continuous tuning adaptive control, and peer-to-peer communications, and are available with an optional built-in LCD screen local UI.

A full range of FEC models combined with the Input/Output Module (IOM) models can be applied to a wide variety of building applications ranging from simple fan coil or heat pump control to advanced central plant management. All FEC Series Controllers configured for BACnet support wireless communications using the ZFR System accessories.

FEATURES

- **Switchable Communications Protocols** – Provides flexibility with a choice between BACnet MS/TP and N2 communication
- **Standard BACnet® Protocol** – Provides interoperability with other Building Automation System (BAS) products that use the widely accepted BACnet standard.
- **Standard Hardware and Software Platform** – Uses a common hardware design throughout the family line to support standardized wiring practices and installation workflows. Also uses a common software design to support use of a single tool for control applications, commissioning, and troubleshooting to minimize technical training.
- **ZFR Wireless Field Controller (FC) or Sensor/Actuator (SA) Bus Interface** – Provides a wireless alternative to hard-wired *Metasys*® system counterparts with either the ZFR1800 Series Wireless Bus or the WNC1800/ZFR182x Pro Series Wireless Field Bus (ZFR Pro), offering application flexibility and mobility with minimal disruption to building occupants.
- **Bluetooth® Wireless Commissioning** – Provides an easy-to-use connection to the configuration and commissioning tool.
- **Auto-Tuned Control Loops** – Reduce commissioning time, eliminate change-of-season re-commissioning, and reduce wear and tear on mechanical devices.
- **Universal Inputs, Configurable Outputs, and Point Expansion Modules** – Allows multiple signal options to provide input/output flexibility.
- **Optional Local User Interface Display** – Allows convenient monitoring and adjusting capabilities at the local device.

FEATURES

- **BACnet® Testing Laboratories (BTL) Listed** – Ensures interoperability with other BTL-listed devices. BTL is a third-party agency, which validates that BAS vendor products meet the BACnet industry-standard protocol.
- **32-bit Microprocessor** – Ensures optimum performance and meets industry specifications.
- **BACnet Automatic Discovery** – Supports easy controller integration into a *Metasys* BAS.
- **End-of-Line (EOL) Switch in MS/TP Field Controllers** – Enables field controllers to be terminating devices on the communications bus.
- **Pluggable Communications Bus and Supply Power Terminal Blocks** – Expedites installation and troubleshooting.
- **Patented proportional adaptive control (P-Adaptive) and Pattern Recognition Adaptive Control (PRAC) technologies** – Provide continuous loop tuning.
- **Wireless Connectivity through the ZFR1800 Series or the WNC1800/ZFR182x Pro Series Wireless Field Bus Systems in MS/TP Controllers** – Enables wireless mesh connectivity to supervisory controllers, facilitating easy initial location and relocation.
- **Writable Flash Memory** – Allows standard or customized applications to be downloaded from the Controller Configuration Tool (CCT) and enables persistent application data.
- **Large Product Family** – Provides a wide range of point mix to meet application requirements and allows for the addition of one or more Input/Output Module (IOM) and Network Sensors to provide even more I/O capacity.
- **User-Friendly Graphic Theme and Clear Pushbutton Identification** – Facilitate easy navigation of the integral or optional UI/display.

ORDERING INFORMATION

MODEL INFORMATION (INCLUDING POINT TYPE COUNTS)

		FEC2511 ¹	FEC16	FEC26
Communication Protocol		BACnet MS/TP, N2		
Engines		All Model types. Some NIE models support MS/TP and N2 devices. Refer to the Network Engines Product Bulletin (LIT-12012138) for details.		
Modular Jacks		6-pin SA Bus Modular Port supports one communicating sensor. Or you can wire up to four communicating sensors to the SA Bus Terminal Block. They cannot be used at the same time.		
			6-pin FC Bus for tool support	
Point Types	Signals Accepted			
Universal Input (UI)	Analog Input, Voltage Mode, 0–10 VDC Analog Input, Current Mode, 4–20 mA ² Analog Input, Resistive Mode, 0–2k ohm, resistance temperature detector (RTD) (1k NI [Johnson Controls], 1k PT, A99B SI), negative temperature coefficient (NTC) (10k Type L, 2.252k Type 2) Binary Input, Dry Contact Maintained Mode	4 (Does not support Current Mode)	2	6
Binary Input (BI)	Dry Contact Maintained Mode Pulse Counter/Accumulator Mode (High Speed), 100 Hz	6	1	2
Analog Output (AO)	Analog Output, Voltage Mode, 0–10 VDC Analog Output, Current Mode, 4–20 mA	2 (Does not support Current Mode)		2
Binary Output (BO)	24 VAC Triac	2 (External Power Only)	3	3
Configurable Output (CO)	Analog Output, Voltage Mode, 0–10 VDC Binary Output Mode, 24 VAC Triac	2	4	4

Notes

¹ The FEC2511 is currently only available in Europe. Contact your local Johnson Controls representative for more information.

² Analog Input, Current Mode is set by hardware for the FEC26, and by software for the FEC16.

ORDERING INFORMATION

CODES	DESCRIPTION
MS-FEC1611-1	10-Point Field Equipment Controller with 2 UI, 1 BI, 3 BO, and 4 CO; 24 VAC; FC and SA Bus Support
MS-FEC1611-1ET	10-Point Field Equipment Controller Extended Temperature controller for rooftop applications. Supports Operational Temperature Range of -40 to 70°C.
MS-FEC1621-1	10-Point Field Equipment Controller with 2 UI, 1 BI, 3 BO, and 4 CO; 24 VAC; FC and SA Bus Support; Integral Display and 6-Button Navigation Touchpad
MS-FEC2511-0	16-Point Field Equipment Controller with 4 UI, 6 BI, 2 AO, 2 BO, and 2 CO; 24 VAC; FC and SA Bus Support. The FEC2511 model does not support current mode.
MS-FEC2611-0	17-Point Field Equipment Controller with 6 UI, 2 BI, 3 BO, 2 AO, and 4 CO; 24 VAC; FC and SA Bus Support FEC2611 Extended Temperature controller for rooftop applications. Supports Operational Temperature Range of -40 to 70°C
MS-FEC2611-0ET	17-Point Field Equipment Controller with 6 UI, 2 BI, 3 BO, 2 AO, and 4 CO; 24 VAC; FC and SA Bus Support; Integral Display and 6-Button Navigation Touchpad
MS-FEC2621-0	1 This model is currently only available in Europe. Contact your local Johnson Controls representative for more information.

ACCESSORIES (PART 1/2)

CODES	DESCRIPTION
Mobile Access portal (MAP) Gateway	Refer to the Mobile Access Portal Gateway Catalog Page (LIT-1900869) to identify the appropriate product for your region.
MS-DIS1710-0	Local Controller Display Refer to Local Controller Display Product Bulletin (LIT-12011273) for more information.
MS-BTCVT-1	Wireless Commissioning Converter with Bluetooth Technology
MS-BTCVTCBL-700	Cable Replacement Set for the MS-BTCVT-1 or the NS-ATV7003-0; Includes One 1.5 m Retractable Cable
WRZ Series Wireless Room Sensors	Refer to the WRZ Series Wireless Room Sensors Product Bulletin (LIT-12011653) for specific sensor model descriptions.
ZFR1800 Series Wireless Field Bus System	This system is used for installations that only support BACnet MS/TP. Refer to the WNC1800/ZFR182x Pro Series Wireless Field Bus System Product Bulletin (LIT-12012320) for a list of available products.
NS Series Network Sensors	Refer to the NS Series Network Sensors Product Bulletin (LIT-12011574) for specific sensor model descriptions.
Y64T15-0	Transformer, 120/208/240 VAC Primary to 24 VAC Secondary, 92 VA, Foot Mount, 30 in. Primary Leads and 30 in. Secondary Leads, Class 2
Y65T42-0	Transformer, 120/208/240 VAC Primary to 24 VAC Secondary, 40 VA, Hub Mount (Y65SP+), 8 in. Primary Leads and Secondary Screw Terminals, Class 2
AP-TBK4SA-0	Replacement MS/TP SA Bus Terminal, 4-Position Connector, Brown (Bulk Pack of 10)
AP-TBK4FC-0	Replacement MS/TP FC Bus Terminal, 4-Position Connector (Bulk Pack of 10)
AP-TBK3PW-0	Replacement Power Terminal, 3-Position Connector, Gray (Bulk Pack of 10)

TECHNICAL SPECIFICATIONS (PART 2/3)

Controller Addressing	
For BACnet-configured controllers	DIP switch set; valid field controller device addresses 4–127 (device addresses 0–3 and 128–255 are reserved)
For N2-configured controllers	DIP switch set; valid control device addresses 1–255
Communications Bus *	RS-485, field selectable between BACnet MS/TP and N2 communications: 3-wire FC Bus between the supervisory controller and field controllers 4-wire SA Bus between field controller, network sensors, and other sensor/actuator devices, includes a lead to source 15 VDC supply power (from field controller) to bus devices
Processor	
MS-FEC16 and MS-FEC26 models	H8SX/166xR Renesas® 32-bit microcontroller
MS-FEC2511-O	RX631 Renesas, 32-bit microcontroller
Memory	
MS-FEC16 and MS-FEC26 models	1 MB Flash Memory and 512 KB RAM
MS-FEC2511-O	4 MB Flash Memory and 8 MB SDRAM
Input and Output Capabilities	
MS-FEC16 Models	2 - Universal Inputs: Defined as 0–10 VDC, 4–20 mA, 0–600k ohm, or Binary Dry Contact 1 - Binary Inputs: Defined as Dry Contact Maintained or Pulse Counter/Accumulator Mode 3 - Binary Outputs: Defined as 24 VAC Triac (selectable internal or external source power) 4 - Configurable Outputs: Defined as 0–10 VDC or 24 VAC Triac BO
MS-FEC2511-O Models	4 - Universal Inputs: Defined as 0–10 VDC, 0–600k ohm, or Binary Dry Contact 6 - Binary Inputs: Defined as Dry Contact Maintained or Pulse Counter/Accumulator Mode 2 - Binary Outputs: Does not have internal 24 VAC source, external power is required 2 - Configurable Outputs: Defined as 0–10 VDC or 24 VAC Triac BO 2 - Analog Outputs: Defined as 0–10 VDC
MS-FEC26 Models	6 - Universal Inputs: Defined as 0–10 VDC, 4–20 mA, 0–600k ohm, or Binary Dry Contact 2 - Binary Inputs: Defined as Dry Contact Maintained or Pulse Counter/Accumulator Mode 3 - Binary Outputs: Defined as 24 VAC Triac (selectable internal or external source power) 4 - Configurable Outputs: Defined as 0–10 VDC or 24 VAC Triac BO 2 - Analog Outputs: Defined as 0–10 VDC or 4–20 mA
Analog Input/Analog Output Resolution and Accuracy	
MS-FEC16 and MS-FEC26 Models	Analog Input: 16-bit resolution Analog Output: 16-bit resolution and ± 200 mV in 0–10 VDC applications
MS-FEC2511-O	Analog Input: 15-bit resolution
Terminations	
MS-FEC16 and MS-FEC26 Models	Input/Output: Fixed Screw Terminal Blocks FC Bus, SA Bus, and Supply Power: 3-wire and 4-wire Pluggable Screw Terminal Blocks FC Bus and SA Bus Port: RJ-12 6-pin Modular Jacks
MS-FEC2511-O1	Input/Output: Fixed Screw Terminal Blocks FC Bus, SA Bus, and Supply Power: 3-wire and 4-wire Pluggable Screw Terminal Blocks SA Bus Port: RJ-12 6-pin Modular Jack
Mounting	Horizontal on single 35 mm DIN rail mount (preferred), or screw mount on flat surface with three integral mounting clips on controller

TECHNICAL SPECIFICATIONS (PART 3/3)

Housing	<i>MS-FEC16 and MS-FEC26 Models</i>	Enclosure material: ABS and polycarbonate UL94 5VB; self-extinguishing; Plenum-rated; Protection Class: IP20 (IEC529)
	<i>MS-FEC2511-O</i>	Enclosure material: ABS and polycarbonate, Rating V0 minimum; Protection Class: IP20 (IEC529)
Dimensions (Height x Width x Depth)	<i>MS-FEC16 Models</i>	150 x 164 x 53 mm including terminals and mounting clips
	<i>MS-FEC2511-O1</i>	150 x 164 x 48 mm including terminals and mounting clips
	<i>MS-FEC26 Models</i>	150 x 190 x 53 mm including terminals and mounting clips
		Note: Mounting space for all field controllers requires an additional 50 mm (2 in.) space on top, bottom, and front face of controller for easy cover removal, ventilation, and wire terminations.
Weight	<i>MS-FEC16 Models</i>	0.4 kg
	<i>MS-FEC25 and MS-FEC26 Models</i>	0.5 kg
CE Compliance		Johnson Controls declares that this product is in compliance with the essential requirements and other relevant provisions of the EMC Directive.
	<i>BACnet International</i>	MS-FEC16 and MS-FEC26 Models: BACnet Testing Laboratories (BTL) Protocol Revision 4 Listed BACnet Application Specific Controller (B-ASC) MS-FEC2511-O: BACnet Testing Laboratories Protocol Revision 9 Listed BACnet Application Specific Controller (B-ASC)

Note

* For more information, refer to the MS/TP Communications Bus Technical Bulletin (LIT-12011034).

BUILDING AUTOMATION PRODUCTS

PROGRAMMABLE CONTROLLERS

METASYS® CONTROLLERS

FAC

FIELD ADVANCED CONTROLLERS

The Advanced Application Field Equipment Controller (FAC) Series Controllers are programmable controllers that can communicate using BACnet/IP, MS/TP, or N2 communications protocols, depending on the model. The FAC4911 is a BACnet Advanced Application Controller (B-AAC) that communicates using BACnet/IP communications protocol. All other FAC Series controllers can be switched between MS/TP and N2 communication protocols. FAC controllers used as MS/TP devices are B-AACs with integral RS-485 MS/TP communications.

FAC Series Controllers feature an integral real-time clock. FACs support time-based tasks and maintain time-based control, which enables these field controllers to monitor and control schedules, calendars, alarms, and trends. FACs can continue time-based control and monitoring when offline for extended periods of time from a *Metasys* system network.

FAC Series Controllers can also operate as stand-alone controllers in applications that do not require a networked supervisory device or for network applications where it is preferred to have the scheduling, alarming, and/or trending performed locally in the field controllers.

The FAC4911 controllers operate on BACnet/IP networks and integrate into Johnson Controls® and third-party systems.

The FAC3611 and FAC3613 models include a fast persistence feature that allows data values to be held at a configurable value, up to once per second. Persistence refers to how often samples of data are stored locally. In the event of a problem, such as a loss of power, data can be retrieved up to the rate that the data is persisted, minimizing the potential loss of data. When power is restored, previously persisted data, up to the rate of persistence, remains available and accessible.

For example, if persistence is configured for once per second, you only risk losing one second of data. Persisting data may be essential for situations that require greater data accuracy, including certain methods of utility data collection and billing.

The FAC2612 controller features line-voltage relay outputs, which makes this controller well-suited for use in terminal units.

The FAC2612-2 model uses a line-voltage power supply, which eliminates the need for a 24 VAC transformer in line-voltage applications.

The FAC2611, FAC2612, FAC3611, and FAC3613 controllers using the MS/TP protocol support wireless communications using the ZFR or ZFR Pro Series accessories and the WRZ-7860 One-to-One Receiver.

FEATURES

- **Switchable Communications Protocols** – Provides flexibility with a choice between BACnet MS/TP and N2 communication.
- **Standard BACnet Protocol** – Provides interoperability with other Building Automation System (BAS) products that use the widely accepted BACnet standard.
- **Standard Hardware and Software Platform** – Uses a common hardware design throughout the family line to support standardized wiring practices and installation workflows; also uses a common software design to support use of a single tool for control applications, commissioning, and troubleshooting to minimize technical training.
- **ZFR Wireless FC or SA Bus Interface** – Both the ZFR1800 Series Wireless and WNC1800/ZFR182x Pro Series Wireless Field Bus (ZFR Pro) provide a wireless alternative to hard-wired *Metasys* system counterparts, offering application flexibility and mobility with minimal disruption to building occupants.
- **Bluetooth® Wireless Commissioning** – Provides an easy-to-use connection to the configuration and commissioning tool.
- **Auto-Tuned Control Loops** – Reduce commissioning time, eliminate change-of-season recommissioning, and reduce wear and tear on mechanical devices.
- **Universal Inputs and Configurable Outputs** – Allows multiple signal options to provide input/output flexibility.
- **BACnet Testing Laboratories (BTL) Listed and Certified** – Ensures interoperability with other BTL-listed devices. BTL is a third-party agency, which validates that BAS vendor products meet the BACnet industry-standard protocol.
- **32-bit Microprocessor** – Ensures optimum performance and meets industry specifications.
- **BACnet Automatic Discovery** – Supports easy controller integration into a *Metasys* BAS.
- **End-of-Line (EOL) Switch in MS/TP Field Controllers** – Enables field controllers to be terminating devices on the communications bus.
- **Pluggable Communications Bus and Supply Power Terminal Blocks** – Expedites installation and troubleshooting.
- **Writable Flash Memory** – Allows standard or customized applications to be downloaded from the CCT and enables persistent application data.
- **DIS17 Remote Display and the MAP Gateway Support** – Enable monitoring and commanding of I/O and configuration parameters

	Note: VA ratings do not include any power supplied to the peripheral devices connected to Binary Outputs (BOs) or Configurable Outputs (COs), which can consume up to 12 VA for each BO or CO, for a possible total consumption of an additional 84 VA (maximum).
Ambient Conditions	
<i>Operating</i>	0 to 50°C, 10 to 90% RH noncondensing; Pollution Degree 2
<i>Storage</i>	–40 to 80°C, 5 to 95% RH noncondensing
Addressing	
<i>For BACnet MS/TP-configured controllers</i>	DIP switch set; valid field controller device addresses 4–127 (device addresses 0–3 and 128–255 are reserved and not valid controller addresses.)
<i>For BACnet/IP controllers</i>	3 rotary switches to assign unique number for each controller on the subnet to identify it in the Controller Tool for uploading, downloading, and commissioning
<i>For N2-configured controllers</i>	DIP switch set; valid controller device addresses 1–254

TECHNICAL SPECIFICATIONS (PART 3/4)

Analog Input (AI)/Analog Output (AO) Resolution and Accuracy	
<i>Analog Input</i>	15-bit resolution
<i>Analog Output</i>	15-bit resolution, +/- 200 mV accuracy in 0–10 VDC applications
Terminations	
<i>MS-FAC2513-0</i>	Input/Output: Fixed Screw Terminal Blocks FC Bus, SA Bus and Supply Power: 3-wire and 4-wire Pluggable Screw Terminal Blocks SA Bus Port: RJ-12 6-pin Modular Jacks
<i>MS-FAC2611-0, MS-FAC3611-0, and MS-FAC3613-0</i>	Input/Output: Fixed Screw Terminal Blocks FC Bus, SA Bus and Supply Power: 3-wire and 4-wire Pluggable Screw Terminal Blocks FC Bus and SA Bus Port: RJ-12 6-pin Modular Jacks
<i>MS-FAC2612-1 and MS-FAC2612-2</i>	Input/Output: Pluggable Screw Terminal Blocks FC Bus, SA Bus and Supply Power: 3-wire and 4-wire Pluggable Screw Terminal Blocks FC Bus and SA Bus Port: RJ-12 6-pin Modular Jacks
<i>MS-FAC4911-0</i>	Input/Output: Fixed Screw Terminal Blocks SA Bus and Supply Power: 3-wire and 4-wire Pluggable Screw Terminal Blocks SA Bus Port: RJ-12 6-pin Modular Jacks
Mounting	Horizontal on single 35 mm DIN rail mount (preferred), or screw mount on flat surface with three integral mounting clips on controller
Housing	Enclosure material: ABS and polycarbonate UL94 5VB, self-extinguishing; Plenumrated Protection Class: IP20 (IEC529) (except the FAC2612 controller)
Dimensions (Height x Width x Depth)	
<i>MS-FAC2513-0</i>	150 x 164 x 48 mm including terminals and mounting clips
<i>MS-FAC2611-0</i>	150 x 190 x 53 mm including terminals and mounting clips
<i>MS-FAC2612-x</i>	150 x 164 x 53 mm including terminals and mounting clips
<i>MS-FAC3611-0, MS-FAC3613-0, MS-FAC4911-0</i>	150 x 220 x 57.5 mm including terminals and mounting clips
	Note: Mounting space for FAC models requires an additional 50 mm space on top, bottom, and front face of controller for easy cover removal, ventilation, and wire terminations.
Weight	0.5 kg
CE Compliance	Johnson Controls declares that this product is in compliance with the essential requirements and other relevant provisions of the EMC Directive and RoHS Directive. Johnson Controls, declares that the FAC2612-2 models are also in compliance with the essential requirements and other relevant provisions of the Low Voltage Directive. Declared as Independently Mounted, Intended for Panel Mounting, Operating Control Type 1.B, 4kV rated impulse voltage, 100°C ball pressure test.
BACnet International

<i>MS-FAC2513-0, MS-FAC3613-0, MS-FAC4911-0</i>	BACnet® Testing Laboratories (BTL) Protocol Revision 15 Listed and Certified BACnet Advanced Application Controller (B-AAC)

Note

The MS-FAC2513-0 model is only available in certain regions. Contact your local Johnson Controls representative for more information.

BUILDING AUTOMATION PRODUCTS

PROGRAMMABLE CONTROLLERS

METASYS® CONTROLLERS

CVM

VAV BOX CONTROLLERS

The CVM03050 equipment controllers are designed for variable air volume (VAV) box applications. CVM03050 controllers operate on an RS-485 BACnet® MS/TP bus as BACnet Advanced Application Controllers (B-AACs), and integrate into Johnson Controls® and third-party BACnet systems.

CVM03050 controllers feature an integral damper actuator, a digital Differential Pressure Transducer (DPT) sensor, and a 32-bit microprocessor. The CVM03050-OP model features an integral potentiometer to sense actual VAV box damper position. These controllers include an integral real-time clock, which enables the controllers to monitor and control schedules, calendars, and trends, and operate for extended periods of time as stand-alone controllers when offline from the Metasys™ system network. These controllers also connect easily to the wired and wireless network sensors for zone and discharge air temperature sensing.

FEATURES

- **Sleek and modern packaging and styling** - Provides a modern, aesthetically pleasing industrial design.
- **Standard hardware and software platform** - Uses a common hardware design throughout the family line to support standardized wiring practices and installation workflows. Also uses a common software design to support use of a single tool for control applications, commissioning, and troubleshooting to minimize technical training.
- **High memory capacity and fast processing power** - Provides application engineers with the horsepower to meet sophisticated control requirements.
- **Auto-Tuned Control Loops** - Reduce commissioning time, eliminate change-of-season re-commissioning, and reduce wear and tear on mechanical devices.
- **Patented Proportional Adaptive Control (P-Adaptive) and PRAC** - Provides continuous loop tuning.
- **Standard BACnet protocol** - Provides interoperability with other Building Automation System (BAS) products that use the widely accepted BACnet standard.
- **Models to support both BACnet MS/TP and N2, with auto-detection of the communications protocols** - Controller auto-detects the BACnet MS/TP or N2 protocol that is connected to it, which enables the same controller to support multiple communication protocols without the need to purchase a special model per protocol, and without extra manual setup.
- **BACnet Testing Laboratories (BTL) listed and certified as BACnet Advanced Application Controllers (B-AAC)** - Ensures openness and interoperability with other BTL-listed devices. BTL is a third-party agency, which validates that BAS vendor products meet the BACnet industry-standard protocol.
- **BACnet automatic discovery** - Supports easy controller integration into a Metasys® BAS.

FEATURES

- **Wireless ZFR and ZFR Pro support** - Provides a wireless alternative to hard-wired MS/TP networking, offering application flexibility and mobility with minimal disruption to building occupants, and also simplifies and speeds up replacements.
- **Integral real-time clock** - An integral real-time clock, which enables the controllers to monitor and control schedules, calendars, and trends, and operate for extended periods of time as stand-alone controllers when offline from the *Metasys* system network.
- **Pluggable screw terminal blocks** - Pluggable input/output wiring terminal blocks that can be removed from the controller provide electrical installers and field technicians the ability to quickly and easily install and service a controller without the need to disconnect and reconnect the input/output wiring.
- **Decimal MS/TP address set with three rotary switches** - Easy-to-use rotary switches set the MS/TP address in decimal format.
- **Universal Inputs and Configurable Outputs** - Allows multiple signal options to provide input/output flexibility.
- **End-of-Line (EOL) switch in MS/TP equipment controllers** - Enables equipment controllers to be terminating devices on the communications bus.
- **Default state for Input/Output wiring validation** - Enables validation of the input and output terminals' wiring prior to download of an application file.
- **Background transfer coupled with enable/disable logic options in Controller Configuration Tool (CCT)** - Saves field technicians' time, enables productivity and minimizes equipment disruption, since the controllers are operating while file updates take place in the background and the application can be left disabled until the system is ready to run.
- **SA Bus commissioning improvements** - Saves field technicians time when commissioning SA Bus devices by enabling an equipment controller to transfer and apply firmware files to all the SA Bus IOM devices connected to it at the same time.

CODES	DESCRIPTION
Y64T15-0	Transformer, 120/208/240 VAC Primary to 24 VAC Secondary, 92 VA, Foot Mount, 72.2 cm, Primary Leads and 76.2 cm Secondary Leads, Class 2 Y65A13-0 Transformer, 120 VAC Primary to 24 VAC Secondary, 40 VA, Foot Mount (Y65AS), 20.32 cm, Primary Leads and 76.2 cm Secondary Leads, Class 2
Y65T42-0	Transformer, 120/208/240 VAC Primary to 24 VAC Secondary, 40 VA, Hub Mount (Y65SP+), 20.32 cm, Primary Leads and Secondary Screw Terminals, Class 2
F-1000-325	Replacement Barbed Fitting for Connecting Tubing, Bulk Pack of 10. For use on CVM03050-0, and also on VMA1630, VMA1615, and VMA1832 models. Note: This accessory is only available for the CVM and some VMA equipment controllers. This accessory is not compatible with the CVM03050-0P (with position feedback) model.
F-1000-326	Flexible Tubing Extension with Barbed Fitting for CVM03050-0x, VMA1615, VMA1630, and VMA1832, 35.56 cm Length. Bulk Pack of 20. Use to extend tubing that connects between the DPT connectors and the DPT sensors, including when replacing a VMA1400 series controller with a CVM03050-0x, VMA16xx or VMA18xx controller. Note: This accessory is only available for CVM and some VMA equipment controllers.
TL-BRTRP-0	Portable BACnet/IP to MS/TP Router

TECHNICAL SPECIFICATION (PART 1/2)

Codes	
<i>M4-CVM03050-0</i>	VAV Box Controller with Integrated Actuator and Digital Differential Pressure Transducer (DPT) Sensor. Includes MS/TP (and N2) communication; 8 points (3 UI, 2 CO, and 3 BO); real-time clock; 32-bit microprocessor; 24 VAC input.
<i>M4-CVM03050-0P</i>	VAV Box Controller with Integrated Actuator, Position Feedback, and DPT Sensor. Includes MS/TP (and N2) communication; 8 points (3 UI, 3 BO, and 2 CO); real-time clock; 32-bit microprocessor; 24 VAC input.
Power Requirement	24 VAC (nominal, 20 VAC minimum/30 VAC maximum), 50/60 Hz, Safety Extra-Low Voltage (SELV)
Power Consumption	10 VA typical, 14 VA maximum ¹ Note: The USB feature is not currently supported.
Power Source	+15 VDC power source terminals provide 35 mA total current. Quantity 1 located in Universal IN terminals - for active (3-wire) input devices
Ambient Conditions	
<i>Operating</i>	0 to 50°C
<i>Storage</i>	-40 to 70°C
Network Engines	All network engine model types
Communications Protocol	BACnet MS/TP; N2. Wireless also supported (at FC Bus and for Sensors) with additional hardware.
Device Addressing for BACnet MS/TP	Decimal address set via three rotary switches: valid controller device addresses 4-127
Device Addressing for N2	Decimal address set via three rotary switches: valid controller device addresses 1-254
Communications Bus ²	BACnet MS/TP (default), N2 3-wire FC Bus between the supervisory controller and equipment controllers 4-wire SA Bus between equipment controller, network sensors and other sensor/actuator devices, includes a lead to source 15 VDC supply power (from equipment controller) to bus devices
Processor	RX64M 32-bit Renesas microcontroller
Memory	16MB Flash Memory and 8MB SDRAM
Real-Time Clock Backup Power Supply	Super capacitor maintains power to the onboard real-time clock for a minimum of 72 hours when supply power to the controller is disconnected.
Input and Output Capabilities	
<i>3 - Universal Inputs</i>	Defined as 0-10 VDC, 0-600k ohms, or Binary Dry Contact
<i>2 - Configurable Outputs</i>	Defined as 0-10 VDC or 24 VAC Triac BO
<i>3 - Binary Outputs</i>	Defined as 24 VAC Triac (external power source only)
Universal Input (UI) Resolution/Configurable Output (CO) Accuracy	
<i>UI Analog Input Mode</i>	15-bit resolution on UIs
<i>CO Analog Output Mode</i>	0-10 VDC ± 200 mV

TECHNICAL SPECIFICATION (PART 2/2)

Air Pressure Differential Sensor	Range: -1.5 in. to 1.5 in. W.C.
<i>Performance Characteristics</i>	Typical Accuracy at ambient operating conditions: +/- 1% in W.C. Typical accuracy at zero (null) pressure is +/- 0.0006 in W.C.
Actuator Rating	4 N·m (35 lb·in) minimum shaft length = 44 mm (1-3/4 in.) (if provided)
Terminations	
<i>Inputs/Outputs</i>	Pluggable Screw Terminal
<i>FC Bus, SA Bus, and Supply Power</i>	4-Wire and 2-Wire Pluggable Screw Terminal Blocks
<i>FC and SA Bus Modular Ports</i>	RJ-12 6-Pin Modular Jacks
Mounting	Mounts to damper shaft using single set screw and to duct with single mounting screw
Housing	
<i>Enclosure material</i>	ABS and polycarbonate UL94 5VB; Selfextinguishing Protection Class: IP20 (IEC529)
Dimensions (Height x Width x Depth)	165 x 125 x 73 mm Center of Output Hub to Center of Captive Spacer: 135 mm
Weight	0.69 kg
CE Compliance	Johnson Controls declares that this product is in compliance with the essential requirements and other relevant provisions of the EMC Directive and RoHS Directive.
<i>BACnet International</i>	BACnet Testing Laboratories™ (BTL) Protocol Revision 15 Listed and Certified BACnet Advanced Application Controller (B-AAC), based on ANSI/ASHRAE 135-2016

Notes

- 1 The VA rating does not include any power supplied to the peripheral devices connected to Configurable Outputs (COs) or Binary Outputs (BOs), which can consume up to 12 VA for each CO or BO, for a possible total consumption of an additional 60 VA (maximum).
- 2 For more information, refer to the *MS/TP Communications Bus Technical Bulletin (LIT-12011034)*.

BUILDING AUTOMATION PRODUCTS

PROGRAMMABLE CONTROLLERS

METASYS® CONTROLLERS

CGM

GENERAL PURPOSE APPLICATION CONTROLLER

The CGM09090 General Purpose Application MS/TP Controller (CGM) is an equipment controller that runs pre-engineered and user-programmed applications, and provides the inputs and outputs required to monitor and control a wide variety of HVAC and other facility equipment. CGM09090 equipment controllers operate on an RS-485 BACnet® MS/TP bus as BACnet Advanced Application Controllers (B-AACs) and integrate into Johnson Controls® and third-party BACnet systems. CGM equipment controllers include an integral real-time clock, which enables the controllers to monitor and control schedules, calendars, and trends, and operate for extended periods of time as standalone controllers when offline from the *Metasys* system network.

FEATURES

- **Sleek and modern packaging and styling** - Provides a modern, aesthetically pleasing industrial design.
- **Standard hardware and software platform** - Uses a common hardware design throughout the family line to support standardized wiring practices and installation workflows. Also uses a common software design to support use of a single tool for control applications, commissioning, and troubleshooting to minimize technical training.
- **High memory capacity and fast processing power** - Provides application engineers with the horsepower to meet sophisticated control requirements.
- **Auto-Tuned Control Loops** - Reduce commissioning time, eliminate change-of-season re-commissioning, and reduce wear and tear on mechanical devices.
- **Patented Proportional Adaptive Control (P-Adaptive) and PRAC** - Provides continuous loop tuning.
- **Standard BACnet protocol** - Provides interoperability with other Building Automation System (BAS) products that use the widely accepted BACnet standard.
- **Models to support both BACnet MS/TP and N2, with auto-detection of the communications protocols** - Controller auto-detects the BACnet MS/TP or N2 protocol that is connected to it, which enables the same controller to support multiple communication protocols without the need to purchase a special model per protocol, and without extra manual setup.
- **BACnet Testing Laboratories (BTL) listed and certified as BACnet Advanced Application Controllers (B-AAC)** - Ensures openness and interoperability with other BTL-listed devices. BTL is a third-party agency, which validates that BAS vendor products meet the BACnet industry-standard protocol.
- **BACnet automatic discovery** - Supports easy controller integration into a *Metasys*® BAS.

FEATURES

- **Wireless ZFR and ZFR Pro support** - Provides a wireless alternative to hard-wired MS/TP networking, offering application flexibility and mobility with minimal disruption to building occupants, and also simplifies and speeds up replacements.
- **Integral real-time clock** - An integral real-time clock, which enables the controllers to monitor and control schedules, calendars, and trends, and operate for extended periods of time as stand-alone controllers when offline from the *Metasys* system network.
- **Pluggable screw terminal blocks** - Pluggable input/output wiring terminal blocks that can be removed from the controller provide electrical installers and field technicians the ability to quickly and easily install and service a controller without the need to disconnect and reconnect the input/output wiring.
- **Decimal MS/TP address set with three rotary switches** - Easy-to-use rotary switches set the MS/TP address in decimal format.
- **Universal Inputs and Configurable Outputs** - Allows multiple signal options to provide input/output flexibility.
- **End-of-Line (EOL) switch in MS/TP equipment controllers** - Enables equipment controllers to be terminating devices on the communications bus.
- **Default state for Input/Output wiring validation** - Enables validation of the input and output terminals' wiring prior to download of an application file.
- **Background transfer coupled with enable/disable logic options in Controller Configuration Tool (CCT)** - Saves field technicians' time, enables productivity and minimizes equipment disruption, since the controllers are operating while file updates take place in the background and the application can be left disabled until the system is ready to run.
- **SA Bus commissioning improvements** - Saves field technicians time when commissioning SA Bus devices by enabling an equipment controller to transfer and apply firmware files to all the SA Bus IOM devices connected to it at the same time.

NS-WALLPLATE-0	Network Sensor Wall Plate
WRZ Series Wireless Room Sensors	Refer to the WRZ Series Wireless Room Sensors Product Bulletin (LIT-12000653) for specific sensor model descriptions.
WRZ-7860-0	Refer to the WRZ-7860 Receiver for One-to-One Wireless Room Sensing Product Bulletin (LIT-12011640) for a list of available products.
WRZ-SST-120	Refer to the WRZ-SST-120 Wireless Sensing System Tool Installation Instructions (LIT-24-10563-55) for usage instructions.
WNC1800/ZFR182x Pro Wireless Field Bus System	Refer to the WNC1800/ZFR182x Pro Series Wireless Field Bus System Product Bulletin (LIT-12012320) for a list of available products.
ZFR1800 Series Wireless Field Bus System	Refer to the ZFR1800 Series Wireless Field Bus System Product Bulletin (LIT-12011336) for a list of available products.
ZFR-USBHA-0	ZFR USB Dongle provides a wireless connection through CCT to allow wireless commissioning of the wirelessly enabled CGM, CVM, FAC, FEC, VMA16, and IOM controllers. It also allows use of the ZFR Checkout Tool (ZCT) in CCT. Note: The ZFR-USBHA-0 replaces the IA OEM DAUBI_2400 ZFR USB dongle. For additional information about the ZFRUSBHA-0 ZFR dongle, refer to the ZCT Checkout Tool Help LIT-12012292 or the WNC1800_ZFR182x Pro Series Wireless Field Bus System Technical Bulletin (LIT-12012356).
Y64T15-0	Transformer, 120/208/240 VAC Primary to 24 VAC Secondary, 92 VA, Foot Mount, 72.2 cm, Primary Leads and 76.2 cm Secondary Leads, Class 2
Y65T42-0	Transformer, 120/208/240 VAC Primary to 24 VAC Secondary, 40 VA, Hub Mount (Y65SP+), 20.32 cm, Primary Leads and Secondary Screw Terminals, Class 2

ORDERING INFORMATION

ACCESSORIES (ORDER SEPERATELY) (PART 2/2)

CODES	DESCRIPTION
F-1000-325	Replacement Barbed Fitting for Connecting Tubing, Bulk Pack of 10. For use on CVM03050-0, and also on VMA1630, VMA1615, and VMA1832 models. Note: This accessory is only available for the CVM and some VMA equipment controllers. This accessory is not compatible with the CVM03050-0P (with position feedback) model.
F-1000-326	Flexible Tubing Extension with Barbed Fitting for CVM03050-0x, VMA1615, VMA1630, and VMA1832, 35.56 cm Length. Bulk Pack of 20. Use to extend tubing that connects between the DPT connectors and the DPT sensors, including when replacing a VMA1400 series controller with a CVM03050-0x, VMA16xx or VMA18xx controller. Note: This accessory is only available for CVM and some VMA equipment controllers.
TL-BRTRP-0	Portable BACnet/IP to MS/TP Router

TECHNICAL SPECIFICATIONS (PART 1/2)

Code	
<i>M4-CGM09090-0</i>	General Purpose Application Controller Includes: MS/TP (and N2) communication; 18 points (7 UI, 2 BI, 4 CO, 2 AO, 3 BO); real-time clock; 32-bit microprocessor; 24 VAC input
Power Requirement	24 VAC (nominal, 20 VAC minimum/30 VAC maximum), 50/60 Hz, Safety Extra-Low Voltage (SELV)
Power Consumption	14 VA maximum ¹ Note: The USB feature is not currently supported. Power Source +15 VDC power source terminals provide 100 mA total current. Quantity 2 located in Universal IN terminals – for active (3-wire) input devices
Ambient Conditions	
<i>Operating</i>	0 to 50°C; 10 to 90% RH noncondensing
<i>Storage</i>	-40 to 80°C; 5 to 95% RH noncondensing
Network Engines	All network engine model types
Communications Protocol	BACnet MS/TP; N2. Wireless also supported (at FC Bus and for Sensors) with additional hardware.
Device Addressing for BACnet MS/TP	Decimal address set via three rotary switches: valid controller device addresses 4-127
Device Addressing for N2	Decimal address set via three rotary switches: valid controller device addresses 1-254
Communications Bus	BACnet MS/TP (default); N2 3-wire FC Bus between the supervisory controller and equipment controllers 4-wire SA Bus between equipment controller, network sensors and other sensor/actuator devices, includes a lead to source 15 VDC supply power (from equipment controller) to bus devices.
Processor	RX64M Renesas® 32-Bit microcontroller
Memory	16 MB flash memory and 8 MB SDRAM
Real-Time Clock Backup Power Supply	Super capacitor maintains power to the onboard real-time clock for a minimum of 72 hours when supply power to the controller is disconnected.

TECHNICAL SPECIFICATIONS (PART 2/2)

Input and Output Capabilities	
7 – Universal Inputs	Defined as 0–10 VDC, 4–20 mA, 0–600k ohms, or Binary Dry Contact
2 – Binary Inputs	Defined as Dry Contact Maintained or Pulse Counter/Accumulator Mode
4 – Configurable Outputs	Defined as 0–10 VDC or 24 VAC Triac BO
2 – Analog Outputs	Defined as 0–10 VDC or 4–20 mA
3 – Binary Outputs	Defined as 24 VAC Triac (external power source only)
Universal Input (UI) Resolution/ Analog Output (AO) Accuracy	
Input	24-bit Analog to Digital converter
Output	+/- 200 mV accuracy in 0–10 VDC applications
Terminations	
Input/Output	Pluggable Screw Terminal Blocks
FC Bus, SA Bus, and Supply Power	4-Wire and 2-Wire Pluggable Screw Terminal Blocks
FC and SA Bus Modular Ports	RJ-12 6-Pin Modular Jacks
Mounting	Horizontal on single 35 mm DIN rail mount (recommended), or screw mount on flat surface with three integral mounting clips on controller
Housing	
Enclosure material	ABS and polycarbonate UL94 5VB; Selfextinguishing Protection Class: IP20 (IEC529)
Dimensions (Height x Width x Depth)	150 x 190 x 44.5 mm including terminals and mounting clips Note: Mounting space requires an additional 50 mm space on top, bottom, and front face of controller for easy cover removal, ventilation, and wire terminations.
Weight	0.5 kg
CE Compliance	Johnson Controls declares that this product is in compliance with the essential requirements and other relevant provisions of the EMC Directive and RoHS Directive.
BACnet International	BACnet Testing Laboratories™ (BTL) Protocol Revision 15 Listed and Certified BACnet Advanced Application Controller (B-AAC), based on ANSI/ASHRAE 135-2016

Note

- ¹ The VA rating does not include any power supplied to the peripheral devices connected to Configurable Outputs (COs) or Binary Outputs (BOs), which can consume up to 12 VA for each CO or BO; for a possible total consumption of an additional 84 VA (maximum).

BUILDING AUTOMATION PRODUCTS

PROGRAMMABLE CONTROLLERS

METASYS® CONTROLLERS

VMA16 / VMA18 / VMA19

VARIABLE AIR VOLUME MODULAR ASSEMBLY

VMA16s (32-bit) and VMA18s are programmable digital controllers tailored for VAV applications that can be switched between MS/TP and N2 communications protocols. When they are used as MS/TP devices, they communicate through the BACnet® MS/TP protocol. In N2 mode, they can be used as replacements for legacy Johnson Controls® controllers.

Note: When a VMA1400 Series controller is replaced on an existing N2 network, the VMA18 Series controller is the preferred device because certain existing sensor models can be reused. VMA18 controllers are intended for use as functional replacements for the VMA1410, VMA1415, VMA1420, and VMA1440 controllers only. VMA18 controllers support field-selectable BACnet MS/TP or N2 protocols. VMA18 controllers support the N2 Open Communications protocol at a maximum rate of 9600 baud.

The VMA1930 programmable controller uses BACnet/IP networking for higher speed communication with the Controller Configuration Tool (CCT) and improved bandwidth. This gives you more flexibility in choosing controllers for your site's specific needs.

The VMA1615, VMA1630, VMA1832, and VMA1930 (32-bit) controllers feature an integral digital differential pressure transducer (DPT), an integral damper actuator, and a 32-bit microprocessor. The controllers' small package size facilitates quick field installation and efficient use of space, while not compromising high-tech control performance. These controllers easily adapt NS Series Network Sensors for zone and discharge air temperature sensing.

The VMA1626 controller is shipped with an actuator but without a differential pressure transducer (DPT), making it well suited for commercial zoning applications or for pressure-dependent VAV box applications where no DPT is required.

The VMA1656 controller is shipped without a differential pressure transducer but with an integrated actuator and ball valve linkage. These controllers are for use on the Johnson Controls VG-1000 1/2 - 1 inch valves and needs to be used primarily as a replacement for the VMA assembly of the VG-1000 Series Smart Valve product. The smart valve product line is ideal for chilled beam applications.

The VMA1628 includes a DPT but does not have an actuator. Without an actuator, this controller is well suited for controlling large VAV boxes that require more than 4 N·m of torque. These features make the VMA16 (32-bit) controllers the product of choice for VAV systems. The wide variety of network sensor models provides options for measuring and displaying zone temperature, occupancy detection, duct temperature, zone humidity and dewpoint determination, carbon dioxide (CO₂) level, setpoint adjustments, VAV box fan speed control, and discharge air temperatures.

The VMA18 models are designed to be functional replacements for the VMA14xx Series Variable Air Volume Modular Assembly controllers. They contain a sensor actuator bus port and accessories well suited for replacing VMA14xx controllers.

VMA16 / VMA18 / VMA19 – METASYS® CONTROLLERS

FEATURES

- **Standard BACnet Protocol** – Provides interoperability with other Building Automation System (BAS) products that use the widely accepted BACnet standard.
- **Standard Hardware and Software Platform** – Uses a common hardware design throughout the family line to support standardized wiring practices and installation workflows; also uses a common software design to support use of a single tool for control applications, commissioning, and troubleshooting to minimize technical training.
- **Switchable communications protocols from BACnet MS/TP to N2 protocols or N2 to BACnet MS/TP protocols**
- **ZFR Wireless FC or SA Bus Interface** – Both the ZFR1800 Series Wireless and WNC1800/ZFR182x Pro Series Wireless Field Bus (ZFR Pro) provide a wireless alternative to hard-wired *Metasys* system counterparts, offering application flexibility and mobility with minimal disruption to building occupants.
- **Bluetooth® Wireless Commissioning** – Provides an easy-to-use connection to the configuration and commissioning tool.
- **Auto-Tuned Control Loops** – Reduce commissioning time, eliminate change-of-season recommissioning, and reduce wear and tear on mechanical devices.
- **Universal Inputs and Configurable Outputs** – Allows multiple signal options to provide input/ output flexibility.
- **Optional Local User Interface Display** – Allows convenient monitoring and adjusting capabilities at the local device.
- **BACnet Testing Laboratories (BTL) Listed and Certified** – Ensures interoperability with other BTL-listed devices. BTL is a third-party agency, which validates that BAS vendor products meet the BACnet industry-standard protocol.
- **32-bit Microprocessor** – Ensures optimum performance and meets industry specifications.
- **BACnet Automatic Discovery** – Supports easy controller integration into a *Metasys* BAS.
- **End-of-Line (EOL) Switch in MS/TP Field Controllers** – Enables field controllers to be terminating devices on the communications bus.
- **Pluggable Communications Bus and Supply Power Terminal Blocks** – Expedites installation VMA Programmable VAV Box Controllers Catalog Page 5 and troubleshooting.
- **Writable Flash Memory** – Allows standard or customized applications to be downloaded from the CCT and enables persistent application data.

The following features are specific to particular models:

- Models that include a DPT feature a state-of-the-art digital non-flow DPT to provide 14-bit resolution with bidirectional flow operation that supports automatic correction for polarity on high- and low-pressure DP tube connections; this pressure sensor eliminates high- and lowpressure connection mistakes.
- A phone jack-style connector on the FC Bus and SA Bus of the VMA16 supports quick connection to the Mobile Access Portal (MAP) Gateway, Wireless Commissioning Converter (BTCVT), ZFR or ZFR Pro Series Wireless Field Bus System wireless routers, and network sensors.
- Models that include an actuator feature a fast response actuator that drives the damper from full open to full closed (90°) in 60 seconds to reduce commissioning time.

VMA16 / VMA18 / VMA19 – METASYS® CONTROLLERS

ORDERING INFORMATION

VMA16 (32-BIT) SERIES AND VMA1930 (INCLUDING POINT TYPE COUNTS PER MODEL)

	VMA 1615	VMA 1626	VMA 1628	VMA 1630	VMA 1656	VMA 1930
Communication Protocol	BACnet MS/TP, N2					BACnet/IP
Engines	All Model types *					NAE55, NAE85, ODS at R9.0 or later
	* Some NIE models support MS/TP and N2 devices. Refer to the Network Engines Product Bulletin (LIT-12012138) for details.					
Modular Jacks	6-pin SA Bus Modular Port supports one communicating sensor. Or you can wire up to four communicating sensors to the SA Bus Terminal Block. They cannot be used at the same time.					
	6-pin FC Bus for tool support					
Universal Input (UI) <i>Analog Input, Voltage Mode, 0–10 VDC</i> <i>Analog Input, Resistive Mode, 0–2k ohm, RTD (1k NI [Johnson Controls], 1k PT, A998 SI), NTC (10k Type L, 2.252k Type 2)</i> <i>Binary Input, Dry Contact Maintained Mode</i>	3	3	3	3	3	3
Binary Output (BO) <i>24 VAC Triac</i>	2	3	3	3	3	3

ORDERING INFORMATION

VMA16 (32-BIT) ACCESSORIES (PART 2/2)

CODES	DESCRIPTION
AP-TBK1003-0	3-Position Screw Terminal that Plugs onto VMA Output Point Spade Lugs
AP-TBK4SA-0	Replacement MS/TP SA Bus Terminal, 4-Position Connector, Brown (Bulk Pack of 10)
AP-TBK4FC-0	Replacement MS/TP FC Bus Terminal, 4-Position Connector (Bulk Pack of 10)
AP-TBK3PW-0	Replacement Power Terminal, 3-Position Connector, Gray (Bulk Pack of 10)
AP-TBK2PW-0	Replacement Power Terminal, 2-Position Connector, Gray (Bulk Pack of 10)
AS-CBLTSTAT-0	Cable adapter for connection to 8-pin TE-6700 Series sensors
AS-CBLVMA-1	Cable Adapter, 8-Pin Female Socket to 6-Pin Male Jack (Bulk Pack of 10)
AS-CBLVMA-2	Cable Adapter, 8-Pin Female Socket to 8-Pin Male Jack with 6-Pin Female Socket for Wireless Commissioning Converter (Bulk Pack of 10)
MS-TBKLVO3-0	Terminal Block Kit – FAC Line Voltage AC Power – 3 Pieces
MS-TBKRO02-0	Terminal Block Kit – FAC 2-Position Relay Output – 9 Pieces
MS-TBKRO03-0	Terminal Block Kit – FAC 3-Position Relay Output – 6 Pieces
MS-TBKCO04-0	Terminal Block Kit – FAC 4-Position Configurable Output – 6 Pieces
MS-TBKUI04-0	Terminal Block Kit – FAC 4-Position Universal Input – 3 Pieces
MS-TBKUI05-0	Terminal Block Kit – FAC 4-Position Universal Input – 3 Pieces
NS-WALLPLATE-0	Network Sensor Wall Plate
F-1000-325	Replacement Barbed Fitting for use on VMA1615, VMA1630, and VMA1832 for Connecting Tubing (Bulk Pack of 10)
F-1000-326	Flexible Tubing Extension with Barbed Fitting for VMA1615, VMA1630, and VMA1832, 14 in. Length (Bulk Pack of 20). Use to extend tubing that connects between the DPT connectors and the DPT sensors, including when replacing a VMA1400 series controller with a VMA16xx or VMA18xx controller.
TL-BRTRP-0	Portable BACnet/IP to MS/TP Router
WRZ-7860-0	Receiver for One-to-One Wireless Room Sensing Systems – functions with WRZ Series Sensors room sensors
ZFR-USBHA-0	ZFR USB Dongle provides a wireless connection through CCT to allow wireless commissioning of the wirelessly enabled FEC, FAC, IOM, and VMA16 controllers. Also allows use of the ZFR Checkout Tool (ZCT) in CCT. Note: The ZFR-USBHA-0 replaces the IA OEM DAUBI_2400 ZFR USB dongle. For additional information about the ZFR-USBHA-0 ZFR dongle, refer to the <i>ZFR1800Series Wireless Field Bus System Technical Bulletin (LIT-12011295)</i> or <i>ZFR1800Series Wireless Field Bus System Quick Reference Guide (LIT-12011630)</i> .

TECHNICAL SPECIFICATIONS (PART 1/3)

VMA Codes	
<i>MS-VMA1615-1</i>	32-bit, Integrated VAV Controller/Actuator/Pressure Sensor, 3 UI and 2 BO; 24 VAC; FC and SA Bus
<i>MS-VMA1626-1</i>	32-bit, Integrated VAV Controller and Actuator, 3 UI, 3 BO, and 2 CO; 24 VAC; FC Bus, and SA Bus (No DPT)
<i>MS-VMA1628-1</i>	32-bit, Integrated VAV Controller and DPT, 3 UI, 3 BO, and 2 CO; 24 VAC; FC Bus, and SA Bus (No Actuator)
<i>MS-VMA1630-1</i>	32-bit, Integrated VAV Controller/Actuator/DPT, 3 UI, 3 BO, 2 CO; 24 VAC; FC and SA Bus
<i>MS-VMA1656-1</i>	32-bit, Integrated VAV Controller and Actuator, 3 UI, 3 BO, and 2 CO; 24 VAC; FC Bus, and SA Bus, Integrated Ball Valve Linkage (No DPT)
<i>MS-VMA1826-1</i>	32-bit, Integrated VAV Controller and Actuator, 3 UI, 3 BO, and 2 CO; 24 VAC; FC Bus, and SA Bus, with 8-9 in TSTAT Port, Recommended for use as a replacement for VMA1440 (No DPT)
<i>MS-VMA1930-0</i>	32-bit, Integrated VAV Controller/Actuator/Pressure Sensor - DPT, 3 UI and 3 BO, 2 CO, 24 VAC, and SA Bus, Includes 6-pin Sensor Port for use with TE-7xx Series Non-Communicating Sensors and two Ethernet Ports for BACnet/IP Communications
Communications Protocol	
<i>MS-VMA16xx-x, MS-VMA18xx-x</i>	BACnet MS/TP, N2
<i>MS-VMA1930-0</i>	BACnet/IP
Engines Supported	
<i>MS-VMA16xx-x, MS-VMA18xx-x</i>	All Models
<i>MS-VMA1930-0</i>	NAE55, NAE85, ODS (MS-VMA1930-0 supports R9.0 or later versions of these engines.)
Power Requirement	24 VAC (nominal, 20 VAC minimum/30 VAC maximum), 50/60 Hz, Safety Extra-Low Voltage (SELV)
Power Consumption	10 VA typical, 14 VA maximum Note: VA ratings do not include any power supplied to the peripheral devices connected to Binary Outputs (BOs) or Configurable Outputs (COs), which can consume up to 12 VA for each BO or CO, for a possible total consumption of an additional 60 VA (maximum).
Ambient Conditions	
<i>Operating</i>	0 to 50°C
<i>Storage</i>	-40 to 70°C
Terminations	
<i>MS-VMA1615-x, MS-VMA1626-x, MS-VMA1628-x, MS-VMA1630-x, MSVMA1656-x</i>	Inputs/Outputs: 6.3 mm Spade Lugs FC Bus, SA Bus, and Supply Power: 4-Wire and 2-Wire Pluggable Screw Terminal Blocks FC Bus and SA Bus Port: RJ-12 6-Pin Modular Jacks
<i>MS-VMA1826-x, MS-VMA1832-x</i>	Inputs/Outputs, SA Bus, and Supply Power: 6.3 mm Spade Lugs N2/FC Bus: Pluggable Screw Terminal Block TSTAT Modular Port: RJ-45 8-Pin Modular Jack
<i>MS-VMA1930-0</i>	Inputs/Outputs: 6.3 mm Spade Lugs SA Bus and Supply Power: 4-Wire and 2-Wire Pluggable Screw Terminal Blocks SA Bus Modular Ports: RJ-12 6-Pin Modular Jacks

TECHNICAL SPECIFICATIONS (PART 2/3)

Controller Addressing	
<i>For BACnet-configured controllers</i>	DIP switch set: valid field controller device addresses 4–127 (device addresses 0–3 and 128–255 are reserved)
<i>For BACnet/IP controllers</i>	3 rotary switches to assign a unique number for each controller on the subnet to identify it in the Controller Tool for uploading, downloading, and commissioning
<i>For N2-configured controllers</i>	DIP switch set; valid control device addresses 1–254
Communications Bus	
<i>MS-VMA16xx and MS-VMA18xx models</i>	RS-485, field selectable between BACnet MS/TP and N2 communications: N2/FC Bus: 1.5 mm (18 AWG) standard 3-wire, twisted, shielded cable recommended between the supervisory controller and field controllers BACnet MS/TP: 0.6 mm (22 AWG) stranded, 4-wire (2-twisted pairs) shielded cable recommended from the VMA controller for network sensors and other sensor/actuator devices; includes a terminal to source 15 VDC supply power from VMA to SA Bus devices Note: For more information, refer to the MS/TP Communications Bus Technical Bulletin (LIT-12011034).
<i>MS-VMA1930-0</i>	BACnet/IP: Two Ethernet ports; 10/100 Mbps; 8-pin RJ-45 connector
Processor	
<i>MS-VMA16 (32-bit) and MS-VMA18 models</i>	RX630 32-bit Renesas® microcontroller
<i>MS-VMA1930-0</i>	RX63N 32-bit Renesas microcontroller
Memory	
<i>MS-VMA16 (32-bit) and MS-VMA18 models</i>	1 MB Flash Memory and 512 KB RAM
<i>MS-VMA1930-0</i>	16 MB serial flash memory and 8 MB of SDRAM
Input and Output Capabilities	
<i>MS-VMA1615-x</i>	3 - Universal Input: Defined as 0–10 VDC, 0–600k ohm, or Binary Dry Contact 2 - Binary Outputs: Defined as 24 VAC Triac (internal power source)
<i>MS-VMA1626-x, MS-VMA1628-x, MS-VMA1630-x, MS-VMA1656-x, MS-VMA1826-x, MS-VMA1832-x, MS-VMA1930-0</i>	3 - Universal Input: Defined as 0–10 VDC, 0–600k ohm, or Binary Dry Contact 3 - Binary Outputs: Defined as 24 VAC Triac (internal power source) 2 - Configurable Outputs: Defined as 0–10 VDC or 24 VAC Triac BO
Analog Input/Analog Output Accuracy	
<i>Analog Input</i>	15-bit resolution on UIs
<i>Analog Output</i>	0–10 VDC ± 200 mV

BUILDING AUTOMATION PRODUCTS

PROGRAMMABLE CONTROLLERS

METASYS® CONTROLLERS

IOM

INPUT/OUTPUT MODULES

The IOM Series expansion I/O modules have integral RS-485 MS/TP communications and integrate into the web-based *Metasys*® system.

IOMs can serve in one of two capacities, depending on where they are installed in the *Metasys* system. When installed on the Sensor/Actuator (SA) Bus of an Advanced Application Field Equipment Controller (FAC), Field Equipment Controller (FEC), or VAV Modular Assembly (VMA) controller, the IOM expands the point count of these controllers. When installed on the Field Controller (FC) Bus, IOMs can be used as I/O point multiplexors to support monitoring and control from a Network Automation Engine (NAE) or Network Control Engine (NCE). The point multiplexor can also be useful for sharing points between other field controllers on the FC Bus using peer-to-peer connectivity.

Note: At Controller Configuration Tool (CCT) Release 10.1 and later, FACs, FECs, and VMAs can communicate by using either the BACnet® or the N2 field bus networking protocol. The operation of the IOM Input/Output Module is not affected by the selection of the BACnet or the N2 protocol in the host controller.

All IOM expansion modules are BACnet Testing Laboratory (BTL) listed and certified.

FEATURES

- **Ability to Reside on the FC Bus or SA Bus** – Provides application flexibility.
- **Standard BACnet Protocol** – Provides interoperability with other Building Automation System (BAS) products that use the widely accepted BACnet standard.
- **BACnet Testing Laboratories (BTL) Listed and Certified** – Ensures interoperability with other BTL-listed devices. BTL is a third-party agency, which validates that BAS vendor products meet the BACnet industry-standard protocol.
- **Standard Hardware and Software Platform** – Uses a common hardware design throughout the family line to support standardized wiring practices and installation workflows; also uses a common software design to support use of a single tool for control applications, commissioning, and troubleshooting to minimize technical training.
- **Universal Inputs and Configurable Outputs** – Allows multiple signal options to provide input/output flexibility.
- **32-bit Microprocessor** – Ensures optimum performance and meets industry specifications.
- **BACnet Automatic Discovery** – Supports easy controller integration into a *Metasys* BAS.
- **Pluggable Communications Bus and Supply Power Terminal Blocks** – Expedites installation and troubleshooting.
- **Wireless Connectivity through the ZFR1800 Series or the WNC1800/ZFR182x Pro Series Wireless Field Bus Systems in MS/TP Controllers** – Enables wireless mesh connectivity to supervisory controllers, facilitating easy initial location and relocation.
- **Bluetooth® Wireless Commissioning** – Provides an easy-to-use connection to the configuration and commissioning tool.
- **End-of-Line (EOL) Switch in MS/TP Field Controllers** – Enables field controllers to be terminating devices on the communications bus.

ORDERING INFORMATION

IOM SERIES MODEL (INCLUDING POINT TYPE COUNTS)

	IOM 1711	IOM 2711	IOM 2721	IOM 3711	IOM 3721	IOM 3731	IOM 4711	IOM 2723	IOM 3723	IOM 3733
Communication Protocol	BACnet MS/TP									
Engines	All Model types. Some NIE models support MS/TP and N2 devices. <i>Refer to the Network Engines Product Bulletin (LIT-12012138) for details.</i>									
Modular Jacks	6-pin SA Bus Modular Port supports one communicating sensor. Or you can wire up to four communicating sensors to the SA Bus Terminal Block. They cannot be used at the same time.									
	6-pin FC Bus for tool support									
Point Types Signals Accepted										
Universal Input (UI) <i>Analog Input, Voltage Mode, 0–10 VDC</i> <i>Analog Input, Current Mode, 4–20 mA</i> <i>Analog Input, Resistive Mode, 0–2 kOhm, RTD (1k NI [Johnson Controls], 1k PT, A99B SI), NTC (10k Type L, 2.252k Type 2)</i> <i>Binary Input, Dry Contact Maintained Mode</i>		2	8	4			6	8

ACCESSORIES

CODES	DESCRIPTION
TL-CCT-0	Metasys Controller Configuration Tool (CCT) software
MS-FCP-0	Metasys Field Controller Firmware Package Files for CCT Mobile Access
Portal (MAP) Gateway	Refer to the Mobile Access Portal Gateway Catalog Page (LIT-1900869) to identify the appropriate product for your region. Note: The MAP Gateway serves as a replacement for the the BTCVT, which is no longer available for purchase, but continues to be supported.
ZFR1800 Series Wireless Field Bus System	This system is used for installations that only support BACnet MS/TP. Refer to the WNC1800/ZFR182x Pro Series Wireless Field Bus System Product Bulletin (LIT-12012320) for a list of available products.
ZFR-USBHA-0	ZFR USB Dongle provides a wireless connection through CCT to allow wireless commissioning of the wirelessly enabled FEC, FAC, IOM, and VMA16 controllers. Also allows use of the ZFR Checkout Tool (ZCT) in CCT.
Y64T15-0	Transformer, 120/208/240 VAC Primary to 24 VAC Secondary, 92 VA, Foot Mount, 30 in. Primary Leads and 30 in. Secondary Leads, Class 2
Y65T42-0	Transformer, 120/208/240 VAC Primary to 24 VAC Secondary, 40 VA, Hub Mount (Y65SP+), 8 in. Primary Leads and Secondary Screw Terminals, Class 2
AP-TBK4SA-0	Replacement MS/TP SA Bus Terminal, 4-Position Connector, Brown (Bulk Pack of 10)
AP-TBK4FC-0	Replacement MS/TP FC Bus Terminal, 4-Position Connector (Bulk Pack of 10)
AP-TBK3PW-0	Replacement Power Terminal, 3-Position Connector, Gray (Bulk Pack of 10)
AS-CBLTSTAT-0	Cable adapter for connection to 8-pin TE-6700 Series sensors
TL-BRTRP-0	Portable BACnet/IP to MS/TP Router

TECHNICAL SPECIFICATIONS (PART 1/3)

<i>MS-IOM3733-0</i>	16-Point IOM with 8 BI, 8 BO, FC Bus, and SA Bus Support
<i>MS-IOM4711-0</i>	17-Point IOM with 6 UI, 2 BI, 3 BO, 2 AO, 4 CO, FC and SA Bus Support
Power Requirement	24 VAC (nominal, 20 VAC minimum/30 VAC maximum), 50/60 Hz, Safety Extra-Low Voltage (SELV)
Power Consumption	14 VA maximum Note: VA ratings do not include any power supplied to the peripheral devices connected to Binary Outputs (BOs) or Configurable Outputs (COs), which can consume up to 12 VA for each BO or CO, for a possible total consumption of an additional 84 VA (maximum), depending on the IOM model.
Ambient Conditions	
<i>Operating</i>	0 to 50°C; 10 to 90% RH noncondensing
<i>Storage</i>	-40 to 80°C; 5 to 95% RH noncondensing
Addressing	DIP switch set; valid field controller device addresses 4-127 (Device addresses 0-3 and 128-255 are reserved and not valid IOM addresses).
Communications Bus	BACnet MS/TP, RS-485 3-wire FC Bus between the supervisory controller and expansion modules (for MS/TP bus communications at 38,400 baud) 4-wire SA Bus between field controller, network sensors, and other sensor/actuator devices. Includes a lead source 15 VDC supply power (from controller or expansion module) to bus devices (for MS/TP bus communications at 38,400 baud). Note: For more information, refer to the MS/TP Communications Bus Technical Bulletin (LIT-12011034)

BUILDING AUTOMATION PRODUCTS

PROGRAMMABLE CONTROLLERS

METASYS® CONTROLLERS

ROMUTEC

INPUT/OUTPUT MODULES

Romutec Input/Output Modules are designed to integrate seamlessly into the *Metasys* system. They are installed on the BACnet MS/TP Sensor Actuator (SA) Bus of a Network Control Engine (NCE) or on the SA Bus of a Field Equipment Controller (FEC/FAC) and expand the point count of these controllers. A full range of FEC/FACs, NCEs and Romutec IO Modules allow various combinations, which will meet the requirements from simple to advanced building applications.

Romutec Input/Output modules can be used when manual overrides are required or when control panel space is limited and a small footprint is needed.

Six models of IO modules are offered with different combinations of BI's, BO's, AI's and AO's. In addition to the standard models optional manual override modules are available. Manual override modules come in two versions, one which can be used inside a control cabinet (DIN rail mounting) and the other for fixing on the cabinet door (front panel mounting). The manual override modules are connected with a USB type cable directly to their corresponding host IO Module. They are preconfigured so setting up requires nothing more than selecting the appropriate DIP switch settings.

Six additional models are also available to meet the requirement for DIN rail mounted IO modules with integral overrides and point status LED's.

FEATURES

- Small footprint, compared with the *Metasys*® Input/Output module (IOM) series.
- Manual overrides available as an option. Integral manual overrides for AO and BO on selected models.
- Models available for indicating the status of binary inputs with LED's.
- Supports BI, BO, AI and AO objects.
- Easy engineering as supported by CCT (Controller Configuration Tool).
- Quick engineering for manual overrides as all modules are preconfigured.
- Connected to the SA Bus of the FEC/FAC or NCE controller as an MSTP slave device.
- Equipped with fault and status LED's for troubleshooting.
- Pluggable terminals with spring clamp for quick and simple wire termination without special tools.

ORDERING INFORMATION

POINT TYPES, FUNCTIONS AND RATINGS

POINT TYPES	FUNCTION	SIGNAL/RATING
Analog IN	Analog Input, Voltage mode	Accepts a 0-10VDC input signal, internal 75kΩ pull-down
	Analog Input, Current mode	Accepts a 0-20 mA input signal, internal 100Ω load impedance
	Analog Input, Resistive mode	Accepts a 0-600 kΩ input signal, internal 12V, 15kΩ pull-up RTD:1k Nickel [L & G], 1k Nickel [DIN], 1k Platinum, A99B Silicon Temperature sensor
Binary IN	Binary Input, Dry contact maintained mode	0.01s minimum pulse width (50Hz at 50% duty cycle) Internal 35V, 2.7kΩ pull-up
Analog OUT	Analog Output, Voltage mode, sources 0-10 VDC output voltage	External 1kΩ minimum load required 10 VDC maximum output voltage, 10 mA maximum output current
Binary OUT	Binary Output, up to 250VAC Relay contact Connects NO to common when activated	Characteristics (Resistive Load): Initial contact resistance 100mΩ (at 1A / 24VDC) Rated load 5A at 250VAC, 5A at 30VDC, 10A at 125VAC Max. switching voltage 277VAC, 30VDC Max. switching capacity 1250VA (AC), 150W (DC) Endurance 1x10 ⁵ ops (Rated Load), 1x10 ⁷ ops (no Load)
	Binary Output, up to 250VAC Relay contact Disconnects NC from Common when activated	Characteristics (Resistive Load): Initial contact resistance 100mΩ (at 1A / 24 VDC) Rated load 3A at 250VAC, 5A at 30VDC, 10A at 125VAC Max. switching voltage 277VAC, 30VDC Max. switching capacity 1250VA (AC), 150W (DC) Endurance 1x10 ⁵ ops (Rated Load), 1x10 ⁷ ops (no Load)

BUILDING AUTOMATION PRODUCTS

CONFIGURABLE FIELD CONTROLLERS

TERMINAL UNIT CONTROLLERS

TUC03

TERMINAL UNIT CONTROLLER

The TUC03 configurable Terminal Unit Controller is designed specifically to provide direct digital control of terminal unit applications with heating and/or cooling coils, an electric heater and a three-speed or variable speed fan.

These applications include close control units, fan coil units, unit ventilators and chilling or heating ceiling beam installations. The device can be configured by the installer, without the need of a PC and software tool, using a set of on-board dip-switches. The controller is designed for field installation in a panel or enclosure or for mounting by original equipment manufacturers (OEMs) on DIN-rail or directly on a surface.

The space comfort set point, occupancy mode and fan speed may be adjusted from a wide range of room sensor modules with options for a digital display.

Communication options are available to enable the controller to be integrated into an N2 Open or BACnet® network of a building automation system. The BACnet interface of the controller complies with the ANSI/ASHRAE Standard 135-2004 for sharing data other devices on the network.

FEATURES

- Field Selectable application type, communication protocol and room module, via dip-switches on controller
- 230 VAC power supply
- 5 VDC / 15 VDC / 24 VAC power supply for field devices, directly provided by the controller
- Modular range of room sensor modules
- Network communications options – N2 Open and BACnet MS/TP
- BACnet MS/TP with peer to peer communication
- Configurable using standard tools

CONFIGURABLE FIELD CONTROLLERS

TERMINAL UNIT CONTROLLER

TUC03 PLUS

TERMINAL UNIT CONTROLLER PLUS

The TUC03 Plus configurable Terminal Unit Controller is specifically designed to provide an improved BACnet® integration compared to the standard TUC03 model.

It allows the direct digital control of terminal unit applications with heating and/or cooling coils, an electric heater and a three-speed or variable speed fan.

These applications include close control units, fan coil units, unit ventilators and chilling or heating ceiling beam installations. The device can be configured by the installer, without the need of a PC and software tool, using a set of on-board dip-switches. The controller is designed for field installation in a panel or enclosure or for mounting by original equipment manufacturers (OEMs) on DIN-rail or directly on a surface.

The space comfort set point, occupancy mode and fan speed may be adjusted from a wide range of room sensor modules with options for a digital display.

The MS/TP field bus is available to enable the controller to be integrated into a BACnet network of a building automation system.

By focusing on supporting the BACnet protocol only, the TUC03 Plus provides a much better BACnet integration compared to its standard version. The N2 protocol will continue to be available on the standard TUC03 model.

FEATURES

- **Improved Performances** – TUC03 Plus BACnet Change-of-Value and Segmentation features improve the overall system communication performances allowing to reduce the number of components required to manage the whole network and therefore saving on the total installed costs.
- **Enhanced User Experience** – TUC03 Plus BACnet State Text features enable a quicker, simpler but enhanced user experience lowering engineers effort during integrations then reducing the engineering costs.
- **Dedicated Room Module** – TUC03 Plus features a new and unique room module with touch screen interface on both white and black colors widening the offering of room user interfaces.

BUILDING AUTOMATION PRODUCTS

CONFIGURABLE FIELD CONTROLLERS INTEGRATED ROOM CONTROL

IRC 3rd EDITION

INTEGRATED ROOM CONTROLLER

IRC Controllers are microprocessor-based programmable controllers designed to control terminal units such as fan coils, heatpumps and chilled beams.

Controllers can be used as standalone or integrated to a LonWorks® or BACnet® network.

Controllers can also be extended with light and sunblind modules and work with a wide range of room sensors that could include CO₂ sensing and motion detection to allow the system to adjust to actual operating conditions and to increase energy savings. They also include wireless capability to connect remotely room sensors.

FEATURES

- Single point of control for environmental comfort in the room for the occupants – temperature, air quality, lighting and sunblinds
- Standard Protocols (Lon and BACnet) to guarantee interoperability with other manufacturers
- Expandable with lighting and sunblind modules to build an integrated room control solution, for up to 45% energy savings
- Universal power supply and optional 24 VAC power outputs, for a direct connection of the controller to the main power supply and outputs such dampers and valve actuators, eliminating the need for transformer
- Multiple sensors management, for a full room management including ambient (temperature-humidity), air quality (CO₂) and presence detection (motion sensor)
- Large choice of user interfaces: remote controls devices, room devices
- Network or wireless room sensors, to reduce wiring cost and create wire-free installations

DIMENSIONS (in mm)

BUILDING AUTOMATION PRODUCTS

SMART EQUIPMENT CONTROLLERS

PEAK™ CONTROLLERS

PEAK™

HVAC/R CONTROLLERS

The PEAK 18 and PEAK 32 Controllers are configurable controllers that can be switched between MS/TP, Modbus® RTU, and N2 Communication protocols real-time through the onboard local display or through the Mobile Access Portal (MAP) Gateway. When the controllers are used as MS/TP devices, they are BACnet® Advanced Application Controllers (B-AACs) with integral RS-485 Master-Slave/Token-Passing (MS/TP) communications.

PEAK Series Controllers feature an integral real-time clock and support time-based tasks, which enables these field controllers to monitor and control schedules, calendars, alarms, and trends.

The PEAK 18 controller features line-voltage relay outputs, making this controller well-suited for use in terminal units. PEAK 18 model uses a line-voltage power supply, eliminating the need for a 24 VAC transformer in line-voltage applications. PEAK 18 comes both in 24 VAC and 120 to 240 VAC power models, with or without display.

The PEAK 32 with larger inputs and outputs counts also features linevoltage relay outputs for many suitable applications. PEAK 32 comes in 24 VAC model, with or without display.

A full range of PEAK 18 and 32 models combined with the Input/Output Module (IOM) models can be applied to a wide variety of HVAC/R applications ranging from simple fan coil or heat pump control to advanced AHU or chiller applications.

FEATURES

- **Standard BACnet Protocol** – Provides interoperability with other Building Automation Systems (BAS) products that use the widely accepted BACnet standard.
- **Standard Software and Application Development** – Uses a common hardware design throughout the family line to support standardized wiring practices and installation workflows. Also uses a common software design to support use of a single tool for control applications, commissioning, and troubleshooting to minimize technical training.
- **Configurable Controller** – Eliminates the need for software or programming in the field. Factory commission and programmed. Only configuration of parameters in the field through local display or MAP.
- **Real-time Switchable communication protocols from BACnet MS/TP to Modbus® or N2** – Is available through the onboard display or MAP Gateway one configuration parameter can be set to switch the protocol in real time.
- **Dedicated Modbus Integration bus** – Provides interoperability with other Modbus devices through the dedicated Modbus master port.
- **Predefined alarms and trends** – Based on HVAC/R application all alarms and trends will be predefined within the controller.

PEAK™ – SMART EQUIPMENT CONTROLLERS

FEATURES

- **Onboard display with real time clock to support local scheduling and trends** – Provides an onboard display for configuration and commissioning of the equipment, validation of controls, validation of alarms, faults and control.
- **Auto-Tuned Control Loops** – Reduce commissioning time, eliminate change-of-season re-commissioning, and reduce wear and tear on mechanical devices.
- **Universal Inputs, Configurable Outputs, and Point Expansion Modules** – Allow multiple signal options to provide input/output flexibility.
- **Optional Local User Interface Display** – Allows convenient monitoring and adjusting capabilities at the local device.
- **Optional Mobile Interface** – Allow monitoring, servicing, and commissioning of the equipment through the MAP gateway, utilizing any smart mobile devices.
- **USB Port** – Onboard USB port for firmware upgrades and backup/restore of configuration of the controller.
- **BACnet Testing Laboratories (BTL) Listing** – Ensures interoperability with other BTL rev 12- listed devices. BTL is a third-party agency, which validates that BAS vendor products meet the BACnet industry-standard protocol.
- **Verasys Connectivity** – Support of Equipment Model technology for plug and play of equipment to the system level.

	<i>PK-IOM5711-0</i>	16-Point IOM with 16 UI, SA Bus Support
	<i>PK-IOM5731-0</i>	16-Point IOM with 8 AO, 8 BO with HOA switches and LED indicators, SA Bus Support
Supply Voltage		24 VAC (nominal, 20 VAC minimum/30 VAC maximum), 50/60 Hz, Safety Extra-Low Voltage (SELV)
Power Consumption		14 VA maximum Note: VA ratings do not include any power supplied to the peripheral devices connected to Binary Outputs (BOs) or Configurable Outputs (COs), which can consume up to 12 VA for each BO or CO, for a possible total consumption of an additional 84 VA (maximum), depending on the IOM model.
Ambient Conditions	<i>Operating</i>	0 to 50°C; 10 to 90% RH noncondensing
	<i>Storage</i>	-40 to 80°C; 5 to 95% RH noncondensing
Addressing		DIP switch set; valid field controller device addresses 4–127 (Device addresses 0–3 and 128–255 are reserved and not valid IOM addresses).
Communications Bus		BACnet MS/TP, RS-485 4-wire SA Bus between field controller, network sensors, and other sensor/actuator devices. Includes a lead source 15 VDC supply power (from field controller) to bus devices.
Processor		H8SX/166xR Renesas® 32-bit microcontroller
Memory		512 KB Flash Memory and 128 KB RAM
Input and Output Capabilities		
	<i>PK-IOM1711</i>	4 - Binary Inputs: Defined as Dry Contact Maintained or Pulse Counter/ Accumulator Mode
	<i>PK-IOM2711</i>	2 - Universal Inputs: Defined as 0 to 10 VDC, 4 to 20 mA, 0 to 600k ohm, or Binary Dry Contact 2 - Universal Outputs: Analog output: Voltage mode, 0-10 VDC; Binary output mode: 24 VAC/DC FET; Analog output: Current mode, 4 to 20 mA 2 - Relay Outputs: (Single-pole, Double-throw); EN 60730 (-2 model only) 6 (4) A N.O. or N.C. only, 240 VAC
	<i>PK-IOM2721</i>	8 - Universal Inputs: Defined as 0 to 10 VDC, 4 to 20 mA, 0 to 600k ohm, or Binary Dry Contact 2 - Analog Outputs: Defined as 0 to 10 VDC or 4 to 20 mA
	<i>PK-IOM3711</i>	4 - Universal Inputs: Defined as 0 to 10 VDC, 4 to 20 mA, 0 to 600k ohm, or Binary Dry Contact 4 - Universal Outputs: Analog Output: Voltage Mode, 0-10 VDC; Binary Output Mode: 24 VAC/DC FET; Analog Output: Current Mode, 4 to 20 mA 4 - Relay Outputs: (Single-Pole, Double-Throw); EN 60730 (-2 model only): 6 (4) A N.O. or N.C. only, 240 VAC
	<i>PK-IOM3721</i>	16 - Binary Inputs: Defined as Dry Contact Maintained or Pulse Counter/Accumulator Mode
	<i>PK-IOM3731</i>	8 - Binary Inputs: Defined as Dry Contact Maintained or Pulse Counter/Accumulator Mode 8 - Binary Outputs: Defined as 24 VAC Triac (Require external low-voltage power source) Note: Binary Outputs (BOs) on MS-IOM3731-0A controllers do not supply power for the outputs; the BOs require external low-voltage (<30 VAC) power sources.

TECHNICAL SPECIFICATION

PEAK IOM SERIES (PART 2/2)

Input and Output Capabilities	
<i>PK-IOM4711</i>	6 – Universal Inputs: Defined as 0–10 VDC, 4–20 mA, 0–600k ohm, or Binary Dry Contact 2 – Binary Inputs: Defined as Dry Contact Maintained or Pulse/Counter Accumulator Mode 3 – Binary Outputs: Defined as 24 VAC Triac (selectable internal or external source power) 4 – Configurable Outputs: Defined as 0–10 VDC or 24 VAC Triac BO 2 – Analog Outputs: Defined as 0–10 VDC or 4–20 mA
<i>PK-IOM5711</i>	16 – Universal Inputs: Defined as 0–10 VDC, 4–20 mA, 0–600k ohm, or Binary Dry Contact
<i>PK-IOM5731</i>	8 – Analog Outputs: Defined as 0–10 VDC or 4–20 mA 8 – Relay Outputs: Defined as 120 VAC–240 VAC SPDT Form C
Analog Input/Analog Output Resolution and Accuracy	
<i>Analog Input</i>	16-bit resolution
<i>Analog Output</i>	16-bit resolution and ± 200 mV in 0–10 VDC applications
Terminations	
<i>Input/Output</i>	Fixed screw terminal blocks
<i>SA Bus and Supply Power</i>	4-wire pluggable screw terminal blocks SA Bus Port: RJ-12 6-Pin modular jacks
Mounting	
	Horizontal on single 35 mm DIN rail mount (preferred), or screw mount on flat surface with three integral mounting clips on controller
Housing	
<i>Enclosure Material</i>	ABS and polycarbonate UL94 5VB; self-extinguishing, Plenum-rated protection class IP20 (IEC529)
Dimensions (Height x Width x Depth)	
<i>PK-IOM17 and PK-IOM27 Family Models</i>	150 x 120 x 53 mm including terminals and mounting clips
<i>PK-IOM2721, PK-IOM3721, and PK-IOM3731 Models</i>	150 x 164 x 53 mm including terminals and mounting clips
<i>PK-IOM37 and PK-IOM47 Family Models</i>	150 x 190 x 53 mm including terminals and mounting clips
	Note: Mounting space for all field controllers requires an additional 50 mm space on top, bottom, and front face of controller for easy cover removal, ventilation, and wire terminations.
Weight	
	0.5 kg maximum
 Compliance	
	Johnson Controls declares that these products are in compliance with the essential requirements and other relevant provisions of the EMC Directive and Low Voltage Directive.

BUILDING AUTOMATION PRODUCTS

SMART EQUIPMENT CONTROLLERS

SMART TERMINAL UNIT CONTROLLERS

ATC

ADVANCED TERMINAL UNIT CONTROLLER

The Advanced Terminal unit Controller (ATC) from Johnson Controls® is a series of configurable controllers specifically designed for terminal unit equipment.

The ATC is available in two line voltage powered hardware models, and controls 2-pipe and 4-pipe equipment.

The controller meets the most demanding comfort and efficiency requirements, due to its energy optimization and on demand ventilation controls.

The ATC features a long list of Johnson Controls patents, best practices. An extensive library of factory-programmed, fully documented and proven applications are available to lower engineering and commissioning costs, granting superior reliability and efficiency.

The on-board power sources for the ancillary field devices reduce the number of required components, such as transformers and wires, therefore cutting installation costs.

The cable strain relief and optional safety cover reduce installation costs, this enables, where regulation allows, the ATC to be installed without an additional cabinet.

The controller's field-selectable communications protocols, including BACnet®, Modbus® and N2, make the ATC suitable for both new and retrofit installations because they provide a cost effective upgrade and modernization path for customers who are using existing N2 controllers.

The ATC fully supports the SMART Equipment™ technology, making it plug and play on the Verasys® smart control systems.

FEATURES

- **Applications Library** - Lower engineering and commissioning costs providing a full set of advanced features as the patented automatic PID tuning, network sensors plug and play, indoor air quality control, energy performance indication, fault detection diagnostics and automatic commissioning mode
- **Line power supply with on-board power for field devices** - Reduce the number of components required which lowers total installation costs
- **Cable strain relief and optional safety covers** - Enable installation without the need for an electrical box which lowers installation costs where applicable
- **Specialized models for Simpler and Complex Applications** - Lower product cost
- **Fully featured SMART Equipment technology** - Verasys SMART Control System enabled
- **Real-time switchable communications protocols** - Suitable for new and retrofit installation, providing higher flexibility, thus protecting investments
- **Standard BACnet protocol** - BACnet Testing Laboratories (BTL) Listing Rev 12 provides interoperability with other Building Automation Systems (BAS) products that use the widely accepted BACnet standard

BUILDING AUTOMATION PRODUCTS

SMART EQUIPMENT CONTROLLERS

VERASYS® APPLICATION CONTROLLERS

VAC

VERASYS APPLICATION CONTROLLERS

The Verasys® Application Controllers are part of the SMART Equipment Controller family. The Verasys Application Controllers run pre-engineered applications and provide the inputs and outputs required to monitor and control a wide variety of HVAC equipment.

Verasys Application Controllers operate on an RS-485 BACnet® MS/TP Bus as BACnet Advanced Application Controllers (B-AACs). The controllers integrate into Johnson Controls® and third-party BACnet systems.

Verasys Application Controllers include an integral real-time clock that enables the controllers to monitor and control schedules, calendars, and trends. The controllers can operate for extended periods of time as stand-alone controllers when they are disconnected from the system network.

FEATURES

- **Standard BACnet Protocol** – Provides interoperability with other Building Automation Systems (BAS) products that use the widely accepted BACnet standard.
- **Standard Software and Application Development** – Uses a common hardware design throughout the family line to support standardized wiring practices and installation workflows. Also uses a common software design to support use of a single tool for control applications, commissioning, and troubleshooting to minimize technical training.
- **Configurable Controller** – Eliminates the need for software or programming in the field. Factory commission and programmed. Only configuration of parameters in the field through local display or MAP.
- **Real-time Switchable communication protocols from BACnet MS/TP to Modbus® or N2** – Is available through the onboard display or MAP Gateway one configuration parameter can be set to switch the protocol in real time.
- **Dedicated Modbus Integration bus** – Provides interoperability with other Modbus devices through the dedicated Modbus master port.
- **Predefined alarms and trends** – Based on HVAC/R application all alarms and trends will be predefined within the controller.
- **Auto-Tuned Control Loops** – Reduce commissioning time, eliminate change-of-season re-commissioning, and reduce wear and tear on mechanical devices.
- **Universal Inputs, Configurable Outputs, and Point Expansion Modules** – Allow multiple signal options to provide input/output flexibility.
- **USB Port** – Onboard USB port for firmware upgrades and backup/restore of configuration of the controller.
- **BACnet Testing Laboratories (BTL) Listing** – Ensures interoperability with other BTL rev 12- listed devices. BTL is a third-party agency, which validates that BAS vendor products meet the BACnet industry-standard protocol.

BUILDING AUTOMATION PRODUCTS

VERASYS® CONTROL SYSTEM SUPERVISORY CONTROLLERS

SBH200

SMART BUILDING HUB

The Smart Building Hub is the base controller for the Verasys® Building Automation System and provides wired and wireless connections and plug and play configuration between all Smart Equipment layers and controls.

Offering many-to-one, multi-client connectivity, the Smart Building Hub is a web based control system that provides an intuitive user interface to any supported smart equipment and Johnson Controls branded field controllers and thermostats.

The Smart Building Hub has a USB Wi-Fi access point, and allows personnel to use an intuitive, browser-based interface to access advanced features like fault detection, alarms, and point configuration.

The Smart Building Hub can be connected to an Ethernet backbone to enable remote connectivity and additional features like email alarms.

The Smart Building Hub user interface scales to the device you are using. On a computer screen, mobile phone or tablet, the main menus and screens are side by side.

Supported Controllers

The Verasys 3.x control system fully supports smart equipment devices, including the flexible PEAK® and Verasys Application Controller (VAC) series of HVAC/R controllers and a wide variety of configurable terminal unit controllers and thermostats as the Advanced Terminal unit Controller (ATC), TUC03 Plus and TEC36xx series.

FEATURES

- **Plug & Play** - Provides access to all identifiable and supported devices connected to the field bus without the need of any tool.
- **Remote Access** - Allows you to access device information through any supported web browser via secure connection and access level.
- **Alarm Notifications** - When connected to Internet, e-Mails can be configured to alert in case of alarms.
- **Space Views** - Space views provides a quick snapshot of what each space is doing and the ability to intuitively change the space working conditions.
- **Data Share** - Allows to share meaningful data between smart system components.
- **Advanced Features** - Allows to view alarms, events, and trends. Also to modify schedules and commission devices.
- **Schedule Synch** - Allows to view synchronize schedule between different smart system components and to access them for monitoring and editing from a single view.
- **Global Schedule** - Allows to view synchronize schedule between different smart system components and to access them for monitoring and editing from a single view.
- **Interlocks to Verasys IOMs Application Controller** - Connect different systems through IOMs Application Controller, into the Verasys Network.

ACC-PWRKIT-1E24	SBH200 24 VDC Power Adapter for Europe
ACC-WIFIKIT-ODU	SBH200 WiFi Dongle Spare Part

TECHNICAL SPECIFICATION

Power Consumption	38W maximum
Ambient Temperature Conditions	
<i>Operating</i>	0 to 50°C
<i>Operating Survival</i>	-30 to 60°C
<i>Non-Operating</i>	-40 to 70°C
Ambient Humidity Conditions	
<i>Storage</i>	5 to 95% RH 30°C maximum dew point conditions
<i>Operating</i>	10-90% RH, 30°C maximum dew point conditions
Transmission Speeds	Serial Communication (SA/FC Bus): 9600,19.2k, 67.8k, or 115.2k bps Ethernet Communication: 10, 100 Mbps,1 Gbps
Transmission Range (Typical)	Wireless Communication: 30 m line-of-sight indoors 91 m line-of-sight outdoors
Network and Serial Interfaces	Two SA/FC ports (RJ12 6-pin port; connects with 1.5 m RJ-12 field bus cable, and one screw terminal plug, 4-pin). Three USB ports (one Micro-B port, and two USB A ports). All support USB 2.0 and Open Host Controller Interface [Open HCI] specification
Dimensions (Height x Width x Depth)	190 mm x 125 mm x 44.5 mm
Housing	White Polycarbonate and Acrylonitrile butadiene styrene (ABS) blend
Weight	0.387 kg
Web Browser Requirements for Computers and Handheld Devices	Computer: Windows Internet Explorer® 10 and Windows Internet Explorer 11, or Google® Chrome™ Handheld Device: The handheld device must be running either Internet Explorer Mobile for Windows® Mobile version 5 or version 6 operating system (OS); Android™ 4.0.3, 4.0.4, and 4.1+, or Google Chrome. Other web browsers may display the UI, but the functionality is not guaranteed.
CE Compliance	Johnson Controls declares that these products are in compliance with the essential requirements and other relevant provisions of the EMC Directive and Low Voltage Directive.

BUILDING AUTOMATION PRODUCTS

NETWORK DISPLAYS, WEBSERVER AND GATEWAYS

MAP GATEWAYS

MAP

MOBILE ACCESS PORTAL GATEWAY

The Mobile Access Portal (MAP) gateway is a pocket-sized web server that provides a wireless mobile user interface to Johnson Controls branded system controllers.

The MAP Gateway can be used to see trunk devices on *Metasys*® systems. It supports Johnson Controls branded Field Controllers, including PEAK®, FEC, FAC, and VMA.

Offering many-to-one, multi-client connectivity, the MAP Gateway gives you access to any supported device that is on a connected BACnet® Master-Slave/Token-Passing (MS/TP) field bus.

The MAP Gateway solution is conveniently sized and has a built-in wireless access point. The MAP Gateway provides an intuitive, browser-based user interface to access advanced features like alarms and point configuration.

FEATURES

- **Multi-Client Connectivity** - Provides access to all identifiable supported devices connected to the BACnet® MS/TP trunk
- **Browser-based Interface** - Offers a local display replacement solution that allows you to access device information through any supported web browser
- **Wi-Fi Connectivity** - Lets you commission, configure, and access building automation equipment using Wi-Fi-enabled smart devices or laptops
- **Advanced Features** - Allows you to view alarms, events, and trends. Also to modify schedules and commission devices
- **Browser-based Remote Building Management** - Allows remote management of building systems
- **Portable Size and Mobility** - Allows for options to permanently mount or carry the unit from site to site
- **Configurable Home Pages for Devices** - Allows you to customize your work processes using the Display Object in the Controller Tool
- **Easy-to-use Intuitive User Interface** - Uses color coded bars on point listings to enable you to quickly get the most important statuses from a long list of points

BUILDING AUTOMATION PRODUCTS

NETWORK DISPLAYS, WEBSERVER AND GATEWAYS FIELD ADVANCED DISPLAY

FAD

FIELD ADVANCED DISPLAY

The Field Advanced Display (FAD) is a user friendly operator interface featuring BACnet® communication and a colorful, graphic display with touch-screen interface.

The solution is specifically designed to enable user interaction with a BACnet MS/TP-based Building Automation Control System through a convenient, comprehensive and intuitive user interface.

The FAD is delivered with a factory programmed application for ease of use and to reduce and simplify its set-up.

Its flexible, attractive and intuitive graphical interface allows any user type to navigate the Building Automation Control System to view useful information such as temperatures, adjust parameters as set-points, program schedules and calendars and monitor dynamic information such as alarms and events. The access authority to information is managed through a series of optional user passwords.

The FAD offers various options to configure. It can be configured directly without the need of a PC or software tool, using its own user interface or it can be conveniently prepared off-line using a PC.

The device configuration can be easily archived, exported or imported with a widely supported file format (CSV) through the embedded USB port.

Its compact dimensions, IP protection ratings and multiple mounting options, together with its modern and discrete design, allow the FAD to properly adapt its style to any type of room and user's preference.

FEATURES

- Factory Programmed Application
- BACnet® MS/TP Communication
- Portable configurations and easily upgradeable
- Compact and neutral design

BUILDING AUTOMATION PRODUCTS

NETWORK DISPLAYS, WEBSERVER AND GATEWAYS TOUCH ADVANCED DISPLAY

TAD

TOUCH ADVANCED DISPLAY

The Touch Advanced Display (TAD) is a comprehensive series of freely programmable operator interfaces featuring both IP and MSTP BACnet® communication and colorful, graphic displays with touch-screen interface.

TAD Displays feature bright TFT widescreen (16:9) displays of different sizes 4.3", 7" and 10" with a fully dimmable LED backlight and resistive touch interface. The integrated HTML 5.0 web server grants remote access whenever the units are connected to an accessible IP network.

TAD series offers an unprecedented price / performance ratio to meet challenging applications requirements from offices to control rooms. They combine state-of-the-art features and top performance with an outstanding design.

TAD Series is the ideal choice for User Interface applications enabling an intuitive and easy interaction with the building automation controls and equipment.

FEATURES

- **Standard BACnet Interfaces (IP / MSTP)** - The TAD Series fulfill the standard BACnet Operator Display (B-OD) profile enriching its minimum requirements with Alarms, Time Schedules and Calendars support, enabling users to take full advantage of the features included in the connected devices.
- **Freely Programmable** - The Touch-Screen Tailoring Tool (T³) suite allows customizing the TAD user experience tailoring it to the effective User requirements. Thanks to the extensive library of symbols and widgets, building data and operations are presented in a consistent way across different applications.
- **Web-Browser Widget** - Embedded web browser devices are becoming a common demand in the marketplace. TAD features a web-browser widget that can be included in the User Interface project empowering the end user to connect to simple web pages and interact with remote systems.
- **Embedded Web-Server** - The web server capabilities natively included in TAD devices allow users to remotely connect and interact with the device through standard internet browsers. The web pages user interface will reflect the same UX of the local application therefore maintaining a consistent look across different interfaces.
- **Simple and Elegant but Robust Design** - Its simplicity of design does not preclude the immediate impression of beauty and the IP66 protection rate for the front of the unit.

TEMPERATURE CONTROLS MECHANICAL THERMOSTATS

270XT

FREEZE PROTECTION, IP30

Sensing element is 3 or 6 meters long to permit attaching across the surface of a coil to guard against freezing at any point. When any 30 cm or more of this element senses a temperature as low as the control setpoint, it will "switch off".

A special version is available with bulb and 2 m capillary, range 24 to 18°C for clamp on or immersion purposes. SPDT change over contacts permit the use of an alarm signal.

FEATURES

- Dust tight PENN switch
- SPDT contacts
- 270XTAN provided with trip-free manual reset
- Controls have adjustable range

APPLICATION

These controls are designed for protection against freeze up of hydronic heating coils, cooling coils and similar application.

TEMPERATURE CONTROLS MECHANICAL THERMOSTATS

A19

CAPILLARY AND SPACE THERMOSTATS, IP30

These thermostats are available with fixed or adjustable differential. The various control ranges cover a broad range of temperature applications with a minimum number of models.

On request a built-in high or low limit stop is possible and can be adjusted quickly and easily in the field. All models have a universal way of adjustment. For this purpose a knob and sealing cap are enclosed.

All are equipped with IP30 enclosure.

FEATURES

- Liquid filled sensing element
- Dust tight Penn switch
- Trip free manual reset
- Front adjustment

APPLICATION

These thermostats are designed for refrigeration, cooling, heating, ventilation and air-conditioning applications. Standard models are provided for remote sensing or room sensing. Models with manual reset are available for low or high limit functions.

TEMPERATURE CONTROLS MECHANICAL THERMOSTATS

A19

CAPILLARY AND SPACE THERMOSTAT, IP65

These thermostats are available with fixed or adjustable differential.
The various control ranges cover a broad range of temperature applications
with a minimum number of models.

SPDT contacts are standard on all models.

FEATURES

- Liquid filled sensing element
- Dust tight PENN switch
- IP65 protection class
- Front adjustment

APPLICATION

These thermostats are designed for applications where a splash-proof and/or dust-tight enclosure is required.

Four types are available:

- Types A19ARC are general purpose capillary thermostats.
- Types A19BRC and A19BQC are space thermostats with coiled element to be used as farm control, outdoor thermostats or in cold storage rooms.
- Types A19AQF is specially designed for milkcool-tank applications.
- Type A19AQC-9101 is specially designed for ice-bank application.

TEMPERATURE CONTROLS MECHANICAL THERMOSTATS

A28

2-STAGE CAPILLARY AND SPACE THERMOSTAT, IP30 / IP65

Controls are compact with fixed differential per stage and (on most models) adjustable differential between stages. Liquid filled element provides wide range, constant differential over whole range and no influence from barometric pressure. Since the bulb contains the major portion of the total fill the thermostat may be considered as cross-ambient, capillary and cup temperature variations affect the operating point only slightly due to the small amount of fill they contain.

For quantity orders it is possible to have the below stated optional constructions:

- Without case and cover for panel mounting
- Close differential per stage
- Different capillary lengths

All standard IP30 enclosure models have a universal way of adjustment. For this purpose a knob and sealing cap are enclosed.

FEATURES

- Liquid filled sensing element
- Dust tight Penn switch
- IP65 protection class models available
- Front adjustment

APPLICATION

These thermostats are designed for various types of heating, cooling, ventilation, or air-conditioning applications. All models have two SPDT switches providing the following control possibilities:

- 2 stage heating
- 2 stage cooling
- Heating/cooling with automatic changeover

TEMPERATURE CONTROLS MECHANICAL THERMOSTATS

A36

3- OR 4-STAGE THERMOSTAT

Models are available in 'open' construction for panel mounting.

Single knob adjustment moves the entire staging band up and down within the range of the control. The differential on each stage and sequencing between stages are factory set.

This permits the OEM to completely engineer the cycling of their equipment without the hazard of field mis-adjustments and erratic sequencing.

FEATURES

- Dust-tight SPDT switches
- Cushion mounted
- Operation from a single, liquid filled element
- Case compensation standard on all models

APPLICATION

Designed for multi-stage thermostatic operation of electrically controlled equipment such as:

- Packaged liquid chillers
- Heat pumps
- Electric duct heaters
- Computer room airconditioners

TEMPERATURE CONTROLS MECHANICAL THERMOSTATS

T22 / T25

STAGE ROOM THERMOSTAT, LINE VOLTAGE, IP20

These thermostats with a sturdy steel cover are provided with a liquid filled sensing element. This element is formed to achieve maximum sensitivity to surrounding air temperature changes.

Coupled with a highly efficient diaphragm and leverage mechanism, the element operates a totally enclosed Penn switch contact with a close differential switching action without the use of "heat or cool" anticipators.

FEATURES

- Liquid filled elements
- Dust tight Penn switch
- Small differential
- 2-stage thermostats with dead band and automatic change over

APPLICATION

These room thermostats are designed to control heating and/or cooling equipment, in commercial industrial or residential installations. Typical uses are for unit heaters, fan coils, cooling rooms etc. Type T22SRX can be used for either heating or cooling.

Type T25B (2-stages) can be used for:

- 2-stages heating
- 2-stages cooling
- Heating/cooling with dead band and automatic change over

TEMPERATURE CONTROLS MECHANICAL THERMOSTATS

A25

ROD AND TUBE SENSING ELEMENT

A rod and tube type sensing element actuate the switch contacts.

Main contacts (1 - 2) are normally closed, and open when the temperature at the element rises to the dial setpoint.

Contacts are re-closed only by operation of the reset lever. The reset lever is "trip-free" and cannot be used to block contacts in a closed position.

FEATURES

- Rod and tube type of element
- Adjustable duct mounting flange
- Trip-free manual reset
- Dust-tight Penn switch

APPLICATION

These warm air limit controls "lock out" on a temperature increase to the control setpoint. Manual reset is required to re-close the electrical contacts. A typical application is to stop air-conditioning or ventilating fans in the event of excessive return air temperature, as from a fire.

FLOAT AND FLOW CONTROLS

MECHANICAL LIQUID FLOW SWITCH

F61

FLOW SWITCH FOR LIQUID

The F61 liquid flow switches can be used in liquid lines carrying water, sea water, swimming pool water, ethylene glycol or other liquids not harmful to the specified materials.

The switches have SPDT contacts and can be wired to energise one device and de-energise another when liquid flow either exceeds or drops below the set flow rate. Pipe insert models and the T-body types for low-flow applications are available.

The IP43 versions can be used for liquid temperatures above dewpoint (*for use in other environments see the Product Data Sheet*). Typical applications are to shut down the compressor on liquid chiller systems, to prove flow on electric immersion heaters and to give a signal or alarm when the pump on condenser cooling system shuts down.

FEATURES

- T-body and pipe-insert types available
- Polycarbonate IP43 enclosure
- Vapour tight IP67 enclosure
- Stainless steel pipe-insert type
- Large wiring space
- Range screw easy accessible.

MECHANICAL LIQUID FLOW SWITCH

F261

FLOW SWITCH FOR LIQUID

The F261 series flow switches respond to fluid flow in lines carrying water, ethylene glycol, or other nonhazardous fluids. These models also work in applications with swimming pool water and lubricating oils.

F261 series standard flow switches use a variety of paddle sizes to respond to fluid flow rates in applications with 1 inch trade size (or greater) pipe.

FEATURES

- Type 3R (NEMA) or type 4 (NEMA) polycarbonate enclosure
- Viton® diaphragm
- Gold-plated contacts on selected models
- Maximum fluid pressure of 290 psig (20 bar)

Notes

- 1 Ensure that the low liquid temperature combined with the low ambient temperature does not lead to the freezing the liquid inside the body (or bellows, where appropriate). Please observe the liquid freezing point.
- 2 At higher ambient temperatures, the maximum allowed liquid temperature becomes lower. The temperature of the electrical switch inside should not exceed 70°C.

FLOAT AND FLOW CONTROLS

MECHANICAL AIR FLOW SWITCH

F62

AIR FLOW SWITCH

The F62 airflow switch detects air flow or the absence of air flow by responding only to the velocity of air movement within a duct.

The control can be wired to open one circuit and close a second circuit (SPDT) for either signaling or interlock purposes. Failure of air flow during normal operation of air handling systems may cause over-heating, coil icing and other conditions that may be detrimental to the equipment.

Typical applications include make-up air systems, air cooling or heating processes and exhaust systems.

FEATURES

- Polycarbonate IP43 enclosure
- Large wiring space
- Range screw easily accessible

DIMENSIONS (in mm)

1	Cable inlet hole Ø 22.7 mm; Dust cup is installed
2	Mounting plate gasket 0.2 mm thick neoprene cell rubber
3	Four mounting holes Ø 5 mm.
4	One paddle 55 mm wide (mounted) One paddle 80 mm wide (packed with the control)

FLOAT AND FLOW CONTROLS

MECHANICAL LIQUID LEVEL SWITCH

F63

LIQUID LEVEL FLOAT SWITCH

The F63 liquid level switch is designed to maintain a liquid level in indoor or outdoor closed tanks holding water, chlorinated water, ethylene glycol or other non-corrosive liquids.

The switch has SPDT contacts and can be wired to close one circuit and open a second circuit when the liquid level rises above or falls below the required level.

The switch maintains the liquid level within (approx.) 13 mm.

The float switch should not be used for liquids lighter than water (density less than 0.95 kg/dm³).

FEATURES

- Solid polycarbonate float
- Vapour tight IP67 enclosure
- Convenient wiring terminals

PRESSURE CONTROLS

ADJUSTABLE DIFFERENTIAL PRESSURE SWITCH

P232

SENSITIVE DIFFERENTIAL

This switch senses a change in the differential pressure (either velocity pressure or pressure drop across a restriction) as the air flow changes.

The pressure, as sensed by two sensing ports, is applied to the two sides of a diaphragm in the control. The spring loaded diaphragm moves and actuates the switch.

The series P232 can also be used to detect small positive gauge pressure by using only the high pressure connection and leaving the low pressure connector open, or to detect a vacuum by using only the low pressure connection and leaving the high pressure connector open to ambient pressure.

FEATURES

- Easy to read setpoint scale
- Large wiring space
- Versatile mounting options

APPLICATION

- This (differential) pressure switch is used to sense flow of air, single or differential air pressure

Typical applications include:

- Clogged filter detection
- Detection of frost on air conditioning coils and initiation of defrost cycle
- Air proving in heating or ventilation ducts
- Maximum air flow controller for variable air volume system

PRESSURE CONTROLS

ADJUSTABLE DIFFERENTIAL PRESSURE SWITCH

P233

SENSITIVE DIFFERENTIAL

This switch senses a change in the (differential) pressure as the airflow changes. The (differential) pressure is applied to the two sides of a diaphragm in the control.

The spring-loaded diaphragm moves and actuates the switch.

The series P233A/F can also be used to detect small positive gauge pressure or to detect a vacuum.

FEATURES

- One switch to measure relative pressure, vacuum or differential pressure
- Various accessories available
- Compact and durable construction
- Easy mounting and wiring, various mounting possibilities
- Standard PG 11 nipple and optional DIN 43650 connector
- Accurate and stable switch point
- SPDT contact standard

APPLICATION

- This (differential) pressure switch is used to sense flow of air, single or differential air pressure

Typical applications include:

- Detect clogged filter
- Detect frost or ice build-up on air conditioning coils
- Air proving in heating or ventilation ducts
- Maximum airflow controller for variable air volume system
- Detect blocked flue or vent
- Monitor fan operation

PRESSURE CONTROLS

ADJUSTABLE DIFFERENTIAL PRESSURE SWITCH

P74

DIFFERENTIAL PRESSURE

The P74 series of differential pressure switches incorporate two opposing pressure elements and an adjustable range setpoint spring with a calibrated scale.

The control switches at the indicated setpoint on an increase in differential pressure and switches back to the normal position when the differential pressure decreases to the setpoint less the mechanical switching differential.

FEATURES

- Heavy duty pressure elements.
- These controls may be used in combination with series P28 lube oil protection control on two compressor, single motor units.

APPLICATION

These controls are designed to sense pressure differences between two points and may be used as operating or limit controls.

Typical applications are to detect flow across a chiller or water cooled condenser, to detect flow in a heating system and sensing lube oil pressure differential on refrigeration compressors.

PRESSURE CONTROLS

ADJUSTABLE PRESSURE SWITCH

P20

FOR AIR-CONDITIONING AND HEAT PUMP APPLICATIONS

The P20 series high and low limit (cut-out) controls for all non-corrosive refrigerants are compact pressure controls ideally suited for commercial or residential packaged air conditioning units, heat pumps, small water chillers, ice cube machines and other applications where a semi fixed setting is acceptable or required and where mounting space is limited.

The P20 series includes auto reset as well as manual reset models and is factory set.

A special setting tool is available while also field (screwdriver) adjustable models can be chosen.

FEATURES

- Field proven reliability
- Reset tab must be released before restart (Trip free manual reset)
- Compact design
- Enclosed dust-tight switch
- SPDT contact with special terminals
- Test pressure 53 bar
- Designed for at least 300000 cycles

DIMENSIONS (in mm)

PRESSURE CONTROLS

ADJUSTABLE PRESSURE SWITCH

P735

SINGLE PRESSURE

The P735 series pressure controls may be used for control functions or limit functions, depending on model number. All models are provided with alarm contacts. All standard models have phosphor bronze bellows and brass pressure connections. Models for use with ammonia are provided with stainless steel bellows and connectors.

FEATURES

- Generous wiring space
- SPDT contacts are provided as standard on single pressure controls
- Trip-free manual reset

APPLICATION

These pressure controls are designed for use in a variety of applications involving refrigeration high or low pressure. Models supplied have a "whole range" design, enabling them to be used with all non-corrosive refrigerants which are within the operating range of the control. They may also be used for other high or low pressure applications such as air, water etc. Models which can be used with ammonia are included in the program.

The P736 series pressure controls may be used for control functions or limit functions, depending on model number. All models are provided with alarm contacts (except P736ALA). All standard models have phosphor bronze bellows and brass pressure connections. Models for use with ammonia are provided with stainless steel bellows and connectors.

FEATURES

- Generous wiring space
- Trip-free manual reset
- Separate alarm contacts for both low pressure and high pressure cut-out (except P736ALA)

APPLICATION

These dual pressure controls are designed for use in a variety of applications involving refrigeration high or low pressure. Models supplied have a "whole range" design, enabling them to be used all non-corrosive refrigerants which are within the operating range of the control. They may also be used for other high or low pressure applications such as air, water etc. Models which can be used with ammonia are included in the program.

PRESSURE CONTROLS ADJUSTABLE PRESSURE SWITCH

P77

SINGLE PRESSURE, IP54

The P77 series pressure controls may be used for control functions or limit functions, depending on model number. All models are provided with alarm contacts. All standard models have phosphor bronze bellows and brass pressure connections. Models for use with ammonia are provided with stainless steel bellows and connectors. Devices conforming to PED 2014/68/EU Cat. IV (HP models) have the fail-safe function with double bellows. Their IP54 classification means that these pressure controls are suitable for almost all applications.

FEATURES

- Generous wiring space
- Splash-proof enclosure (IP54)
- SPDT contacts are provided as standard on single pressure controls.
- Trip-free manual reset

APPLICATION

These pressure controls are designed for use in a variety of applications involving refrigeration high or low pressure. Models supplied have a "whole range" design, enabling them to be used with refrigerants R22, R134A, R404A, R410A, R290 and CO₂ sub-critical and all other non-corrosive refrigerants which are within the operating range of the control. They may also be used for other high or low pressure applications such as air, water etc. Models which can be used with ammonia are included in the program. Also models tested and approved to PED 2014/68/EU Cat. IV (supersedes DIN and TUV approval) are included in the program.

PRESSURE CONTROLS

ADJUSTABLE PRESSURE SWITCH

P78

DUAL PRESSURE, IP54

The P78 series pressure controls may be used for control functions or limit functions, depending on model number.

All models are provided with alarm contacts (except P78ALA). All standard models have phosphor bronze bellows and brass pressure connections. Models for use with ammonia are provided with stainless steel bellows and connectors.

Devices conforming to PED 2014/68/EU Cat. IV have a double bellows on the high pressure versions.

Their IP54 classification means that these pressure controls are suitable for almost all applications.

FEATURES

- High refrigerant pressure. Suitable for R410A and CO₂ subcritical applications.
- Gold plated contacts
- Generous wiring space
- Splash-proof enclosure (IP54)
- Trip-free manual reset
- Patented separate alarm contacts for both low pressure and high pressure cut-out (except P78ALA)

APPLICATION

These pressure controls are designed for use in a variety of applications involving refrigeration high or low pressure. Models supplied have a "whole range" design, enabling them to be used with refrigerants R22, R134A, R404A, R410A, CO₂ sub-critical and all other non-corrosive refrigerants which are within the operating range of the control. They may also be used for other high or low pressure applications such as air, water etc. Models which can be used with ammonia are included in the program. Also models tested and approved to PED 2014/68/EU Cat. IV (supersedes DIN and TUV approval) are included in the program.

PRESSURE CONTROLS

FIXED SETTING PRESSURE SWITCH

P100

DIRECT MOUNT PRESSURE SWITCH

The P100 series are encapsulated, non-adjustable, direct mount pressure controls typically used for low and high-pressure cut-outs for OEM applications.

The P100 series are produced according to switchpoint requirements of customers. The small dimensions, weight and protection class makes the P100 series applicable for use without the need of additional mounting brackets.

The P100 series can be used for all non-corrosive refrigerants like R134a; R22; R404, R410A, R290, R600, HFO1234, R744 and others.

FEATURES

- Compact size and light weight
- Encapsulated, dust tight switch IP67
- Broad variety of electrical and pressure connections

APPLICATION

- Computer room air conditioning
- Refrigeration/Air conditioning condensers
- Commercial refrigeration
- Ice machines
- Food service equipment

SYNTHETIC FLEXIBLE HOSE

The synthetic hoses consist of a seamless PA compound inner layer reinforced with a braided layer of high performance synthetic fibre.

This reinforcement is protected by an oil, weather and abrasion resistant Polyester Elastomer Compound.

The standard assembly length is 0,9 meter with one straight and one elbow 90 degree hose fitting.

The fitting connection is 1/4" metal tube with 7/16"-20 UNF swivel nut connection suitable for 1/4" SAE male flare.

Other lengths and/or fitting connections configurations (Style 50, 51 straight or elbow) are available on request (quantity orders only).

FEATURES

- Very flexible
- Low minimum bend radius (30 mm)
- One straight and one 90° elbow pressure connection
- Polyester Elastomer Compound construction
- High pressure safety ratio
- Low effusion

APPLICATION

These synthetic hoses are designed for pressure measuring connections. They provide, for example, a very flexible connection between a refrigerant compressor and pressure controls. The hoses can be used for all non-corrosive refrigerants including R134a, R22, R404a, R407c and R410A with pressures within the maximum pressure range of the hose. Hoses are tested with common compressor oils in combination with above mentioned refrigerants.

PRESSURE CONTROLS

ADJUSTABLE OIL PROTECTION SWITCH

P28

OIL PROTECTION

These controls measure the pressure differential between the pressure generated by the oil pump and the refrigerant pressure at the crankcase.

A built-in time delay switch allows for pressure-pick up on start and avoids nuisance shutdowns on pressure drops of short duration during the running cycle.

When the compressor is started, the time delay switch is energised. If the net oil pressure does not build up within the required time limit, the time delay switch trips to stop the compressor. If the net oil pressure rises within the required time after the compressor starts, the time delay switch is automatically de-energised and the compressor continues to operate normally. If the net oil pressure should drop below setting (scale pointer) during the running cycle, the time delay switch is energised and, unless the net oil pressure returns to cut-in point within the time delay period, the compressor will be shut down, and have to be manual reset.

The compressor can never run longer than the predetermined time on low oil pressure.

Controls are available only for manual reset after cut-out.

FEATURES

- Heavy duty pressure elements
- Safety lock-out with trip-free manual reset
- Ambient compensated timing
- Dust-tight Penn switch

APPLICATION

These oil protection controls are designed to give protection against low net lube oil pressure on pressure lubricated refrigeration compressors.

PRESSURE CONTROLS

ADJUSTABLE STEAM PRESSURE SWITCH

P48

STEAM PRESSURE

The P48 series have been developed for special applications where pressure must be controlled.

All models have an adjustable differential depending on the range (*see type number selection table*).

The P48AAA-9110 and P48AAA-9120 has the power element outside the case.

All the models have phosphor bronze bellows and brass pressure connections except the P48AAA-9150. This model has a stainless steel bellows and pressure connection and is provided with a brass adapter 1/4"-18 NPT female to R3/8 male.

FEATURES

- Generous wiring space provided
- Splash-proof enclosure (IP54)
- SPDT contacts are provided as standard on single pressure control
- Trip-free manual reset

APPLICATION

The series P48 pressure controls are designed as operating or high/low cut-out control on steam, air or (hot) water applications. Also for non-combustible gases which are not harmful to the materials in contact with these mediums. On steam applications a steam trap is recommended.

MODULATING WATER VALVES

PRESSURE ACTUATED WATER VALVES

V43 / V243

REGULATING VALVES

The V43 / V243 pressure-actuated water-regulating valves are designed to regulate water flow through the condenser of large refrigerated cooling systems. These pilot-operated valves open on an increase in refrigerant head pressure and provide modulating operation. The V43 / V243 water-regulating valves are available for commercial and maritime applications.

V43 valves are available for non-corrosive low- and medium-pressure refrigerants such as R-134A, R-404A, R-502 and R-507. Specially designed V43 valves are also available for ammonia service (R-717).

V243 valves are available for non-corrosive high-pressure refrigerants such as R410A.

Commercial V43 / V243 valves are constructed with a cast iron body, brass internal parts, and bronze seat material.

To resist the corrosive action of sea water, the V43/V243 maritime and navy models are constructed with a red brass body, bronze and monel interior parts, and monel seat material.

FEATURES

- Built-in pilot valve
- Easy adjustment
- Drain plug
- Mesh monel screen

MODULATING WATER VALVES

PRESSURE ACTUATED WATER VALVES

V46

2-WAY PRESSURE ACTUATED WATER VALVES - COMMERCIAL APPLICATIONS

These pressure actuated modulating valves control the quantity of water to a condenser by directly sensing pressure changes in a refrigerant circuit.

The valves can be used in non-corrosive refrigerant systems. Ammonia power elements and valves designed for salt-water applications are available.

The valves have a quick opening characteristic and open on pressure increase (direct acting). Reverse acting (close on pressure increase) is possible.

FEATURES

- Pressure balanced valve design
- Pressure actuated
- 3/8, 1/2, 3/4" are angled body type valves with high K_v value
- 3/8" up to 2" pressure valves "all range" types
- Quick opening valve characteristics
- No close fitting or sliding parts in water passages
- Easy to disassemble. All parts can be replaced
- Special bronze bodies and monel parts
- Power elements with stainless steel bellows available
- Wide range of pressure connection styles
- Nickel plated seats available for 3/8, 1/2, and 3/4" valves
- Direct/reverse action

MODULATING WATER VALVES

PRESSURE ACTUATED WATER VALVES

V46SA

PRESSURE ACTUATED WATER VALVES, LOW FLOW

The V46SA is a direct acting, "all range", pressure actuated modulating valve, used to control the waterflow to a condenser by directly sensing pressure changes in a non-corrosive refrigerant circuit.

The V46SA is specially designed for use on equipment requiring a low condenser waterflow such as icemakers, small heatpumps and watercoolers. The springhousing and power element are rolled to the valve body.

Rubber diaphragms seal the water away from the range spring and bellows part so these are not submerged in water where they would be subject to sedimentation and corrosion.

The valve can be ordered style 5 (without capillary), style 13, style 34 and style 50 (incl. 75 cm capillary).

The capillary part will be delivered separated from the valve.

FEATURES

- Valve designed for low flow
- "All range" power element and spring housing
- Small dimensions
- Pressure actuated
- Various pressure connection style
- High refrigerant pressure resistant bellows

MODULATING WATER VALVES

PRESSURE ACTUATED WATER VALVES

V48

3-WAY PRESSURE ACTUATED WATER VALVES

These watervalves are especially designed for condensing units cooled either by atmospheric or forced draft cooling towers. They may be used on single, or multiple condenser hook-ups to the tower.

The type V48 valve senses the compressor head pressure and allows cooling water to flow to the condenser, to by-pass the condenser, or to allow waterflow to both condenser and by-pass line in order to maintain correct refrigerant head pressure.

A further advantage of this system is that the 3-way valve permits a continuous water flow to the tower so the tower can operate efficiently with a minimum of maintenance on nozzles and wetting surfaces.

The valves can be used in non-corrosive refrigerant systems. Ammonia power elements and valves designed for salt-water applications are available. The valves have a quick opening characteristic.

FEATURES

- Pressure balanced design
- Free movement of all parts
- Easy manual flushing
- High K_v values
- Pressure actuated
- Can be used as mixing or diverting valve

MODULATING WATER VALVES

PRESSURE ACTUATED WATER VALVES

V246 / V248

WATER REGULATING VALVES FOR HIGH PRESSURE REFRIGERANTS

The V246 / V248 series 2-way and 3-way pressure actuated water regulating valves for high-pressure refrigerants regulate water flow and control refrigerant head pressure in systems with single or multiple watercooled condensers. These valves have an adjustable opening point in a refrigerant pressure range of 200 to 400 psig (13.8 to 27.6 bar).

These series valves are designed specifically for condensing units cooled either by atmospheric or forced draft cooling towers. They are used on single or multiple condenser hook-ups to the tower to provide the most economical and efficient use of the tower. V246 / V248 valves may be used with standard non-corrosive or ammonia refrigerants.

For applications where the coolant may be corrosive to the internal parts, maritime models are available, which have nickel copper (Monel®) internal parts.

FEATURES

- No close fitting or sliding parts in water passages
- Accessible range spring
- Take-apart construction
- Pressure-balanced design
- Corrosion-resistant material for internal parts

MODULATING WATER VALVES

TEMPERATURE ACTUATED WATER VALVES

V47

These modulating water valves can be used for heating applications. It does have an heating element which means that the bulb temperature always must be higher than the valve body (power element).

The valve opens at increasing bulb temperature.

The bulb must be mounted pointing downwards up to horizontal.

FEATURES

- Pressure balanced valve design
- 3/8, 1/2, 3/4" are angled body type valves with high K_v value
- Quick opening valve characteristics
- No close fitting or sliding parts in water passages
- Easy to disassemble. All parts can be replaced

ELECTRONIC EXPANSION VALVES

QREV-PSHC

QUICK RESPONSE EXPANSION VALVE

The Quick Response Expansion Valve (QREV) with the Precision Superheat Controller (PSHC) is a compact, electronic, closed loop, rapid response superheat control solution for refrigeration and HVAC applications.

The QREV is next generation electronic expansion valve (EEV) technology providing maximum evaporator efficiency by quickly reaching the preferred superheat.

The QREV includes a silicon-based microelectromechanical system (MEMS) pilot valve that responds to a signal from the PSHC and pilots a smooth gliding spool valve that regulates refrigerant flow through the QREV, virtually eliminating valve wear and greatly extending valve life. QREVs are offered in several capacity ranges.

The PSHC is an electronic superheat controller that provides precise control to the QREV through varying load conditions. The PSHC is installed on a pressure port at the evaporator outlet.

The PSHC uses an internal pressure sensor and an external temperature sensor to control the QREV flow and maintain the preferred superheat at the evaporator outlet. The PSHCs are currently set up to control one of 17 approved refrigerants for easy commissioning.

FEATURES

- **Quick response valve** – Provides rapid and precision control of evaporator outlet superheat.
- **Silicon-Based MEMS Technology and Smooth-action Spool Valve** – Reduces valve wear and extends valve life.
- **Closed loop solution** – Simplifies installation and commissioning without the need for a front-end or supervisory controller.
- **Modbus® RTU Compliant Subordinate Device** – Provides remote monitoring and adjustment on Modbus Networks.
- **Compact solution** – Allows use in limited space applications.

IMPORTANT:

These nominal QREV capacities are determined at AHRI-ANSI standard expansion valve lab test conditions. The actual capacity required by your refrigeration system may vary significantly depending on local ambient conditions and the load encountered during system operation. The best practice is to select the valve size (tonnage) that meets the highest loads requirements of your system.

CONDENSER FAN SPEED CONTROLLERS

1-PHASE CONDENSER FAN SPEED CONTROL

P215PR

DIRECT-MOUNT SINGLE PHASE CONTROLLER

These direct mount pressure actuated condenser fan speed controllers are designed for speed variation of single-phase motors.

Head pressure control of a refrigeration system, through speed variation of the fan on an air-cooled condenser, results in optimum performance throughout the year.

A pressure actuated device, gives the most direct and fastest response to pressure variations in the refrigerant system. The controller varies the supply voltage to the motor from 30% to at least 95% over the proportional band using the phase cutting principle.

This provides speed variation of permanent split capacitor or shaded pole motors that do not draw more than 4 A (rms) full load current.

Cut-off models (fan stops at low pressure) as well as minimum speed models (fan keeps running at 30%) are available.

The controllers can be used in non-corrosive refrigerant systems.

FEATURES

- Condenser pressure control by fan speed variation
- Pressure input
- Direct mount
- Setpoint screw on top
- Built-in suppression filter
- IP65
- Compact design
- Attractive styling
- Quick connector plug included
- CE
- New range 5-15 bar for R134a

DIMENSIONS (in mm)

CONDENSER FAN SPEED CONTROLLERS

1-PHASE CONDENSER FAN SPEED CONTROL

P215RM

REMOTE-MOUNT SINGLE PHASE CONTROLLER

The new P215RM (Remote Mount) is an addition model to our very successful P215PR Direct Mount FSC which is in program since 2004.

We have designed the P215RM for situations where mounting space is limited or if the refrigeration line is too thin so it cannot carry the weight off the P215PR. Also new on this product is the all-in bracket design which is part of the complete Aluminium housing.

The P215RM can be screwed to a side panel and connected to the refrigeration line by using a flexible hose or a copper capillary.

FEATURES

- Quick and easy to install due to integral mounting bracket
- Easy mounting with style 5 pressure connection
- No need to use a male / male adaptor between P215RM and flex hose
- Three ranges available 5 - 15 bar, 10 - 25 bar, 22 - 42 bar
- Output current maximum 4A at 55°C operating ambient temperature
- Global design CE approval

CONDENSER FAN SPEED CONTROLLERS

1-PHASE CONDENSER FAN SPEED CONTROL

P216

CONDENSER FAN SPEED CONTROLLER

These controllers are designed for speed variation of single phase motors, especially for fan speed control on air cooled condensers. Head pressure control of a refrigeration system, through speed variation of the fan on an air-cooled condenser, results in optimum performance throughout the year.

Using a pressure transducer as the input device to the fan speed controller, gives the most direct and fastest response to pressure variations in the refrigerant system. The controller varies the supply voltage to the motor from 45% to at least 95% over the proportional band using the phase cutting principle. If the pressure drops below the adjusted setpoint minus the proportional band, the output to the motor is zero volt or the adjusted min. speed setting. This provides speed variation of permanent split capacitor or shaded pole motors which do not draw more than 12 A (rms) full load current.

The controller used for dual pressure input varies the fan speed by directly sensing the pressure changes of two separate refrigerant circuits. The setpoint of each pressure transducer can be separately adjusted.

The controller selects the input with the greatest cooling demand to control the fan speed.

The transducers can be used in non-corrosive refrigerant systems.

The motor manufacturer should have approved his product for this speed control principle. It is recommended to confirm with the electric motor manufacturer, that the motor can be used with a controller, using the phase cutting principle for speed variation. You can also provide a copy of this P216 product data sheet to the motor manufacturer/supplier for review.

FEATURES

- The new benchmark in standard FSC
- Easy to Install and Easy to operate
- Output Range: 0,5 to 12 Amp (1 phase)
- Input 0-10 Vdc
- Including 0-50 bar pressure transducer P499VCS-405C
- Heatpump mode
- Reverse operation mode
- Master / Slave mode
- Fixed pressure ranges for direct replacement (P215)
- Setpoint and Min speed potmeters
- Operate with High Efficiency AC-fan motors who comply to ERP 2015 directive.

CONDENSER FAN SPEED CONTROLLERS

1-PHASE CONDENSER FAN SPEED CONTROL

P266

PRESSURE ACTUATED SINGLE PHASE DIGITAL CONTROLLER

The P266 pressure actuated single phase digital controller is a cost-effective, weather-resistant, durable motor speed control.

The P266 control is designed for approved single-phase, Permanent Split-Capacitor (PSC) motors commonly used in a wide variety of refrigeration and air conditioning condenser fan applications.

The P266 series controls are designed to replace the Johnson Controls® P66 series and P215 series fan speed controls, providing additional features and flexibility, greater energy efficiency, and longer motor life in a compact, rugged, weather-resistant package.

P266 models are available for 208 to 240 VAC and 440 to 575 VAC range applications. P266 controls have current ratings from 4 to 12 A depending on the voltage and model.

Some P266 models provide optional control of up to three auxiliary (fixed-speed) fans or fan stages. Also, some models provide two additional high-voltage triacs, which allow you to split the source power to the main and auxiliary windings, and connect a low-speed capacitor to increase efficiency at low speed operation.

FEATURES

- Global design CE / UL / CSA / C-tick
- Microprocessor based
- Field programmable, digital setting
- One or two electronic pressure transducers (P266SNR)
- Pressure range 0 - 35 bar or 0 - 52 bar
- Patented design
- Output 8 or 12 Amp at 60°C ambient temperature
- Robust aluminium IP54 enclosure with integral heatsink
- Multi triac control providing energy savings up to 25%
- Optional auxiliary (vernier) control
- Auto selection 50 / 60 Hz

CONDENSER FAN SPEED CONTROLLERS

1-PHASE CONDENSER FAN SPEED CONTROL

P315PR

DIRECT-MOUNT PRESSURE ACTUATED FOR EC MOTORS

The direct mount pressure actuated condenser fan speed controllers are designed for speed variation of electronically commutated (EC) motors. Head pressure control of a refrigeration system, through speed variation of the fan on an air-cooled condenser, results in optimum performance throughout the year.

The controllers can be used in non-corrosive refrigerant systems.

A pressure actuated device provides the most direct and fastest response to pressure variations in the refrigerant system. The controller varies the supply voltage to the motor from 5% to at least 95% over the proportional band.

FEATURES

- Fan speed variation condenser pressure control
- Pressure input
- Direct mount option
- Setpoint screw location on top of device
- IP65 enclosure
- Compact design
- Attractive styling
- Quick connector plug included
- Suitable to control 1 or 3 phase EC motor

CONDENSER FAN SPEED CONTROLLERS

3-PHASE CONDENSER FAN SPEED CONTROL

VFD68

VARIABLE FREQUENCY DRIVES

The VFD68 Variable Frequency Drive provides three-phase motor speed control in a variety of HVAC/R applications. The VFD68 drive is designed primarily for condenser fan speed control on HVAC and refrigeration condensing units, but can also be set up to control a variety of pumps, blowers and fans.

The VFD68 drive accepts an input signal from P499 electronic pressure transducer, or other devices that provide a 0 to 5 VDC, 0 to 10 VDC, or 4 to 20 mA signal.

The application-specific design of the VFD68 drive provides a simple interface, which makes the drive easy to understand and operate.

You can quickly and easily reconfigure the VFD68 drive to control variable speed pumps in cooling and heating applications, or to control variable speed supply fans in VAV applications.

The VFD68 drive is an RS485, RTU-compliant ModBus® slave device and can be integrated into a ModBus network.

APPLICATIONS

The VFD68 drive accepts input signals from a variety of pressure transducers, temperature sensors, and low-voltage controllers to provide continuous response to changing condenser load conditions.

The VFD68 drive allows the system to:

- Maintain optimum condenser head pressure
- Operate in low ambient temperature conditions down to -40 °C
- Reduce short-cycling, which occurs when using
- Use on/off fan controls
- Maintain a more stable evaporator temperature
- Operate more efficiently, reducing electricity cost.

The VFD68 drive can also:

- Help optimize compressor operation, reduce wear, and extend compressor life by stabilizing the condenser head pressures
- Reduce motor repair and replacement costs by eliminating the condenser fan short-cycling
- Extend refrigerated product life and provide more consistent comfort cooling by stabilizing evaporator temperatures

VFD68 3-PHASE CONDENSER FAN SPEED CONTROL

FEATURES

- Selectable input types allows use with 0 to 5 VDC (ratiometric), 0 to 10 VDC, or 4 to 20 mA input signals from transducers, sensors, and controllers.
- High input signal selection of two similar inputs (230 or 460 volt models only) provides fan speed control of dual circuit condensing units, based on the highest pressure circuit.
- Compact design provides for easy and flexible installation.
- Three-phase, 230, 460, or 575 VAC models can control a wide variety of three-phase motors ranging up to 10hp.
- Simple and advanced end-user settings provide quick and simple application setup and operation, as well as advanced setup parameters for custom applications.

FIELD AND COLD ROOM CONTROLLERS

MODULAR ELECTRONIC CONTROL SYSTEM

SYSTEM 450™

MODULAR ELECTRONIC CONTROLS

System 450™ is a family of modular, digital electronic controls that is easily assembled and set up to provide reliable temperature, pressure, and humidity control for a wide variety of Heating, Ventilating, Air Conditioning and Refrigeration (HVACR) and commercial/industrial process applications.

The System 450 control system is designed to replace System 350™ control system and System 27, and provide many additional features and benefits with less than a dozen model variations.

All System 450 control modules are multipurpose and field configurable out-of-the-box; each module is designed for use in temperature, pressure, and humidity systems. A System 450 control system can be easily assembled and configured to monitor and control temperature, pressure, and humidity simultaneously.

A single C450 control module can be set up as a stand-alone control or connected to expansion modules to control up to ten outputs based on any of the three available inputs.

A control system may consist of relay outputs (Single-Pole, Double-Throw [SPDT]), analog outputs (0–10 VDC or 4–20 mA), or any combination of relay and analog outputs.

FEATURES

- Durable, compact modular design with plug-together connectors and DIN rail or direct wall mount capability
- Multipurpose, field-configurable modules designed for global use
- Backlit Liquid Crystal Display (LCD) and four-button touchpad user interface
- Up to three inputs and up to ten outputs (relay or analog)
- Versatile, all-in-one, stand-alone control modules
- An extensive suite of compatible temperature and humidity sensors as well as pressure transducers
- High input signal selection
- Differential control
- Adjustable user-defined reset setpoint (C450R Only)
- Adjustable minimum and maximum setpoint temperature (C450R only)
- Selectable warm weather shutdown temperature (C450R only)
- Adjustable setback temperature (C450R only)

DIMENSIONS (in mm)

ORDERING INFORMATION (PART 1/2)

FIELD AND COLD ROOM CONTROLLERS ELECTRONIC CONTROL DEVICES

ER LINE

ELECTRONIC REFRIGERATION LINE

Devices are designed to be incorporated in refrigerated display cases and cold storage rooms.

ER Line proposes progressive offer from basic controls to advanced controls including real time clock, energy saving and network communication to be integrated with monitoring system.

It also introduces specific products for supermarkets (e.g. compressor rack).

HARDWARE FEATURES

- Robust front panel for durability and long term usage
- Direct 230 V supply, no external transformer required
- Up to 5 relays in a single package
- NTC or PTC (A99) sensors
- Removable plug connectors for quick mounting and wiring
- Embedded real time clock, no additional clock card required
- Embedded RS485 port, no additional communication card required

APPLICATION FEATURES

- Positive or negative temperature units with a single product
- Minimum and maximum temperature monitoring
- Comprehensive controls
- Light and standby switching
- Energy saving (2nd setpoint)

FIELD AND COLD ROOM CONTROLLERS ELECTRONIC CONTROL DEVICES

A525

ELECTRONIC REFRIGERATION CONTROLLERS WITH ADAPTIVE DEFROST

The A525 series refrigeration controller with adaptive defrost provides refrigerated space control and defrost control for medium and low temperature refrigeration applications.

The A525 controller has five integral line-voltage, dry-contact relays to control the compressor, defrost heater or solenoid, evaporator fans and (user provided) alarm devices. The controller can control resistive heat, hot-gas bypass, or passive defrost. The controller can also control two speed evaporator fans.

The adaptive defrost feature allows the controller to adjust the defrost schedule to the minimum number of defrost intervals required to maintain peak efficiency, save energy, and maintain consistent space temperature.

The A525 controller has an IP65 enclosure that allows for wall-surface mount or optional DIN Rail mount.

FEATURES

- 5 Relays / 4 Inputs
- CE/UL rated
- Easy to clean display front panel
- IP65 Robust housing
- HACCP logging function
- USB port for download logging files / Upload Firmware / Commissioning
- Modern Design
- Energy saving functionality
- RS485 Modbus communication
- Communicate with QREV – PSHC Electronic Expansion Valve
- VERASYS® compatible

MULTI-STAGES
CONTROL DEVICES

MS LINE

GENERAL PURPOSE AND MULTI-STAGES

This range of versatile controls is intended for single or multistage (2 or 4 stages) applications such as heating, cooling but also humidity or pressure depending on the input type.

This range incorporates all control functions as required by modern applications and it exists in both panel mount and DIN rail enclosures. Particular attention has been given to its style in order to better suit your machine design.

This complete range of microprocessor based controls offers innovative features and "state of the art" technology.

FEATURES

- Attractive panel mount and DIN rail mount enclosure
- Up to 4 relays in panel mount enclosure
- 230 Volt power supply models available
- Accept temperature (A99) and 0-10 Volts sensor signal depending on models
- Power supply to sensors on 0-10 Volts models available from controller
- Accurate and interchangeable IP68 sensor
- Wide range of enclosures for sensors available
- Keyboard lock
- SMD technology

TRANSDUCERS AND SENSORS PRESSURE TRANSDUCER

P499

ELECTRONIC PRESSURE TRANSDUCER

The P499 series is a new global pressure transducer with an excellent price performance ratio.

The P499 exceeds the latest industrial CE/UL requirements including surge protection, and is over voltage protected in both positive and reverse polarity.

The P499 is designed to produce a linear analogue signal based on the sensed pressure.

The pressure port is machined from a solid piece of 17-4PH stainless steel. There are no O-rings or welds that are exposed to the pressure media. This results in a leak proof, all metal sealed pressure system which withstand more than 10 million pressure cycles without failure.

FEATURES

- Single-piece machined steel pressure port
- Environmentally sealed electronics
- Reliable, repeatable performance and long operating life
- Slender body design
- Available in several pressure ranges up to 50 bar.

TRANSDUCERS AND SENSORS PRESSURE TRANSDUCER

P598

ELECTRONIC PRESSURE TRANSDUCER

The P598 series electronic pressure transducers are compact, economical, rugged, direct-mount pressure transducers designed for use in commercial and industrial refrigeration and air conditioning applications.

These transducers provide a proportional analog signal based on the sensed pressure.

The P598 series transducers feature environmentally protected electronics with stainless steel construction. The digitally compensated P598 transducers with microelectromechanical system (MEMS) pressure sensor technology are highly accurate over a broad temperature range, resisting the effects of wide ambient temperature swings, high humidity, condensation, and icing.

The pressure port is milled from SUS303 stainless steel, except for models with a copper tube port. The P598 series transducers operate with any corrosive or non-corrosive refrigerants that are compatible with SUS303 stainless steel. The P598 transducers are also used with water, condensate, glycol, ammonia, and many other compatible fluids and gases.

The P598 series offers a variety of pressure ranges, covering most common refrigeration and air conditioning applications.

FEATURES

- **Innovative cavity-side MEMS pressure sensing** – Highly accurate over a wide temperature range.
- **Unique sensor circuitry** – Protects transducer from overvoltage and short-circuiting.
- **Rugged design** – Established through life cycle testing of 10 million + cycles for proven reliability.
- **Approved for Today's Refrigerants** – The P598 is approved for use with ammonia and all hydrochlorofluorocarbons (HCFC), hydro-fluorocarbons (HFC) and HFC refrigerants up to a pressure of 57.71 bar (750 psi).

TRANSDUCERS AND SENSORS PRESSURE TRANSDUCER

P599

ELECTRONIC PRESSURE TRANSDUCER

The P599 series electronic pressure transducers are compact, economical, rugged, direct-mount pressure transducers designed for use in commercial and industrial refrigeration and air conditioning applications. These transducers provide a proportional analog signal based on the sensed pressure.

The P599 series transducers feature environmentally protected electronics with stainless steel construction. The digitally compensated P599 transducers are highly accurate over a broad temperature range, resisting the effects of wide ambient temperature swings, high humidity, condensation and icing.

The pressure port is machined from 304L stainless steel. No o-rings or organic materials are exposed to the pressure media, allowing for a leak-proof, all-metal, sealed pressure system. The P599 series transducers operate with any corrosive or non-corrosive refrigerants that are compatible with stainless steel (304L SS), including water condensate, carbon dioxide, glycol, most refrigerants (including ammonia) and many other compatible fluids and gases. The P599 transducers also can be used with the following natural refrigerants: NH₃ (ammonia) and CO₂ (carbon dioxide) in accordance with hazardous location requirements.

The P599 series provides transducers in a variety of pressure ranges, covering most common refrigeration and air conditioning applications.

FEATURES

- **Industrial Duty Design** – Offers a sealed design that includes a snubber to dampen pressure pulsations and has no o-rings for reliable performance in the most harsh environments.
- **10 Million Plus Full Scale Pressure Cycle Rated Life Span** – Provides life use with no degradation of accuracy or performance over the life of the transducer.
- **Approved for Today's Refrigerants** – Use with an extensive number of refrigerants, including HCFC, HFC, CO₂ and ammonia.
- **Environmentally Protected Electronics** – Provide high vibration tolerance and prevent ingress and egress that can occur through suction line icing and thawing.

TRANSDUCERS AND SENSORS

LEAK DETECTION

LEAK DETECTORS

LEAK DETECTORS

The JCI product range offers Leak detectors (in order to comply to the EU F-gas Directive) for the following gases:

- Ammonia (NH₃)
- Synthetic refrigerants HFC (R134a, R410a etc) as shown in this catalogue
- Carbon dioxide (CO₂)
- Hydro Carbons (R290, R600)

The MPU multi point units need to be used in combination with the MP series of detectors.

The GD/GS series of detectors are standalone detectors and have 3 alarm relays that are factory calibrated depending on the gas type.

ORDERING INFORMATION

FACTORY-SET ALARM LEVELS (BY EXPERIENCE APPROPRIATE ALARM LEVELS AND RANGES)

DETECTOR TYPE	RANGE	ALARM LEVELS
NH ₃ -1000	0-1000 ppm	150 / 300 / 500 ppm
NH ₃ -4000	0-4000 ppm	150 / 300 / 3000 ppm
