# Abstract

For the most part, cryptocurrencies are decentralized. Network nodes validate transactions, which are then recorded in a public data structure known as a Blockchain, which is a distributed ledger. Cryptography is used to protect transactions, control the creation of excess units, and verify the transfer of assets and value in a cryptocurrency. It was developed as a substitute for cash as a medium of exchange and a store of value.

Today's technology is based on the notion of decentralization. It boosts security, privacy, and protection. Decentralization's most important feature is that it reduces corporate risk and increases transparency. This method resolves the issue of a user's security or confidentiality being threatened.

# About Meta Pac-man

It's a new crypto platform that offers locked liquidity and is safe and secure.

In their play to Earn VR games, Meta Pac-Man makes blockchain technology visible. They use simple gaming elements that everyone can understand and enjoy, regardless of whether or not they are a blockchain expert.

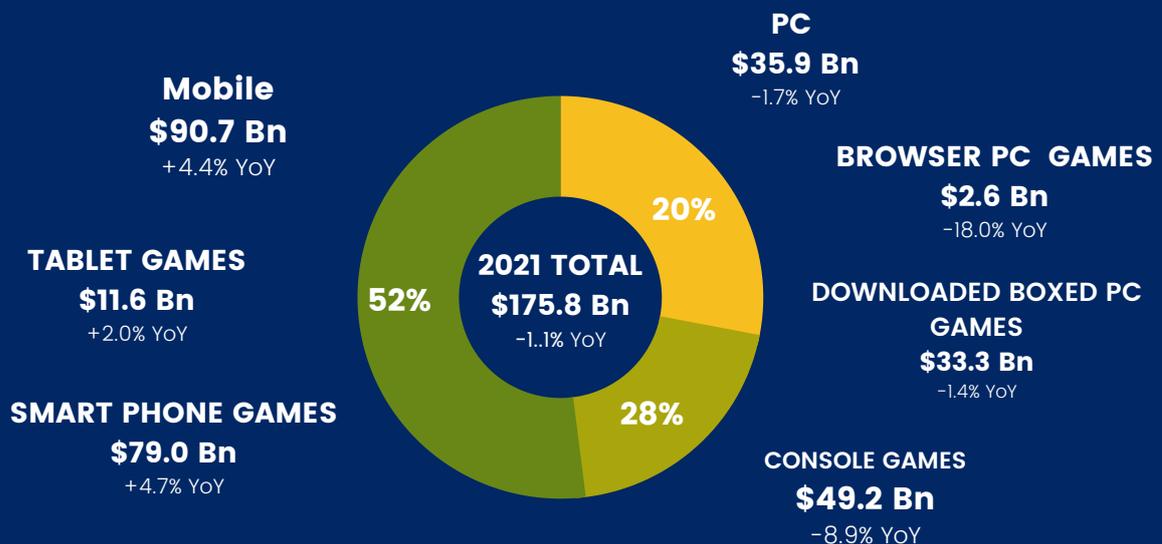

Meta Pac-Man enters the crypto-industry and builds a name for itself with its exclusive gaming offerings. It ensures that blockchain technology is present in their games. Their focus is on adopting simple game mechanics that allow all players to understand and enjoy the game to its full potential, regardless of whether or not they are blockchain experts.

Meta Pac-Man's experts have created a platform that benefits its users in a variety of ways. It offers a Play to Earn virtual reality gaming community as well as a VR adaptation of the arcade craze in the Metaverse. It also provides a secure environment for playing the Play to Whale system and having fun. In addition, users can see and experience hyper-real animated creatures in their immediate environment.

# Gaming Market Size

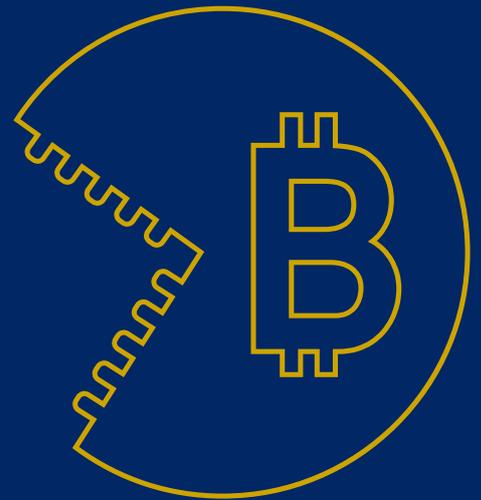

The Metaverse's principal platform is gaming, which allows users to engage with and experience a deeper reality while playing. Gamers may interact with the environment around them rather than being glued to a flat-screen. Be a part of the \$176 billion games market's increasing consumer base.

## THE GLOBAL GAME MARKET (2021) PER SEGMENT

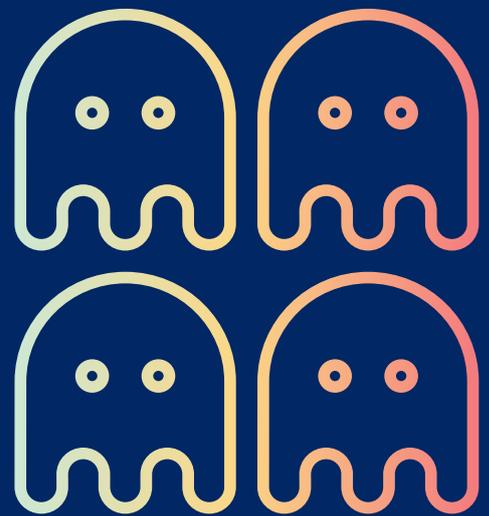

# Meta Pac-Man Features

For the community, Meta Pac-Man is launching two different sorts of systems. The first is a modernized version of the classic Pac-Man game. Weekly game results will award the best players in a play to earn blockchain. Players will also be able to compete against one another in multiplayer VR-based games, similar to a sit&go poker tournament. The concept is to allow members of the community to play their old-school favorite game while also earning or winning money.

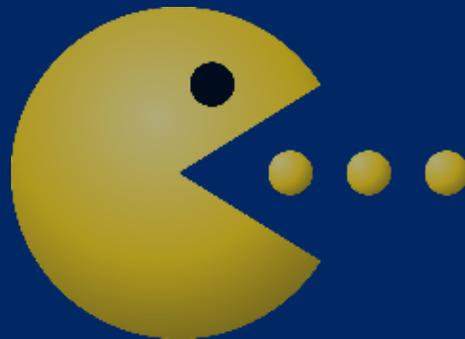

The second feature will be a game tool or add-on. To take advantage of Meta Pac-Man's benefits, users must first complete a few steps. They must first move to have access to the AR-based NFT marketplace. Second, in the geocaching AR multiplayer Metaverse, locate their NFTs. Clients must relocate and discover their PAC-MAN NFTs in the third step, which occurs during Weekly airdrops. In the VR Pac-Man game, the NFT characters will be rated based on their attributes. Finally, the app's valued users will be able to hide and trade NFTs on the market.

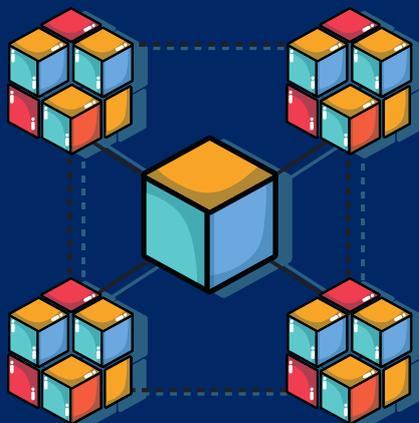

# Why Meta Pac-man?

Since Pac-Man is everyone's favorite, Meta Pac-Man demands No Tax, No fee but just Massive burn & marketing strategy and Play to whale gaming system.

TechRate audits the Contract of the platform. The team possesses the Doxxed dev and an experienced app developer team. Dev wallets are fully transparent. Determined crypto-enthusiasts must-visit Telegram for more information and Pancake Swap to buy.

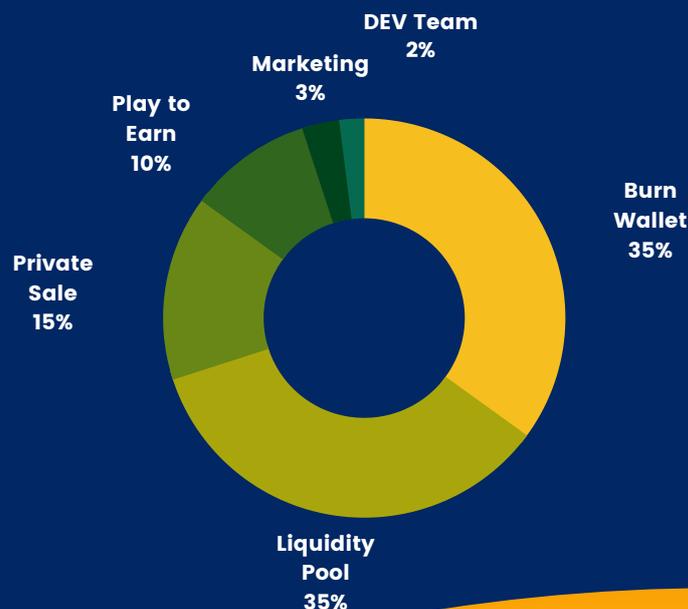

# Tokenomics

**Chain:** Binance Smart Chain

**Total supply:** 1000.000.000.000

**Contract address:** 0x18Ae71804A9edF08760A97caEf245EF622e1ed3A

- 35 % will be burned in community games
