

Using the MPS 16kWh 48V wall mount battery with the Victron Multi RS Solar 48/6000 makes for a very simple to install, cost effective system.

This system would suit a small residence with the capability to run fridges, kitchen appliances, water pumps, air conditioners, washing machines and anything else a regular household uses. Extra battery capacity can be added for more energy storage.

Basic remote monitoring can be added with the Global link 520 with no requirement for internet on site (site must have telstra reception). If more detailed monitoring is required the Cerbo can be used (internet connection required)

	Device settings must be set accordingly. Settings available from www.mictronix.com.au			
	This drawing is for reference only. The installer shall be suitably licenced and trained in the locality of installation
