# HYDROGEN FACIAL

---

*Hydroveil generates 85cc of 99.9% pure hydrogen in 1 minute and is able to deliver approximately 83.3cc to the skin. Hydrogen is delivered through highly concentrated oxygen (95%) which can produce up to 1660cc hydrogen within 20 minutes. This can reduce the free radicals in the body by 30%.*

*Hydroveil stimulates collagen production by infusing hydrogen molecules into the skin which is 5x more potent than vitamin C, as a result, skin appears tighter, firmer and rejuvenated.*

*Promotes collagen generation*

- Prevents skin aging*
- Prevents UV damage*
- Reduces wrinkles*
- Hydrates the skin*
- Anti-inflammatory*

# HYDROGEN FACIAL

---

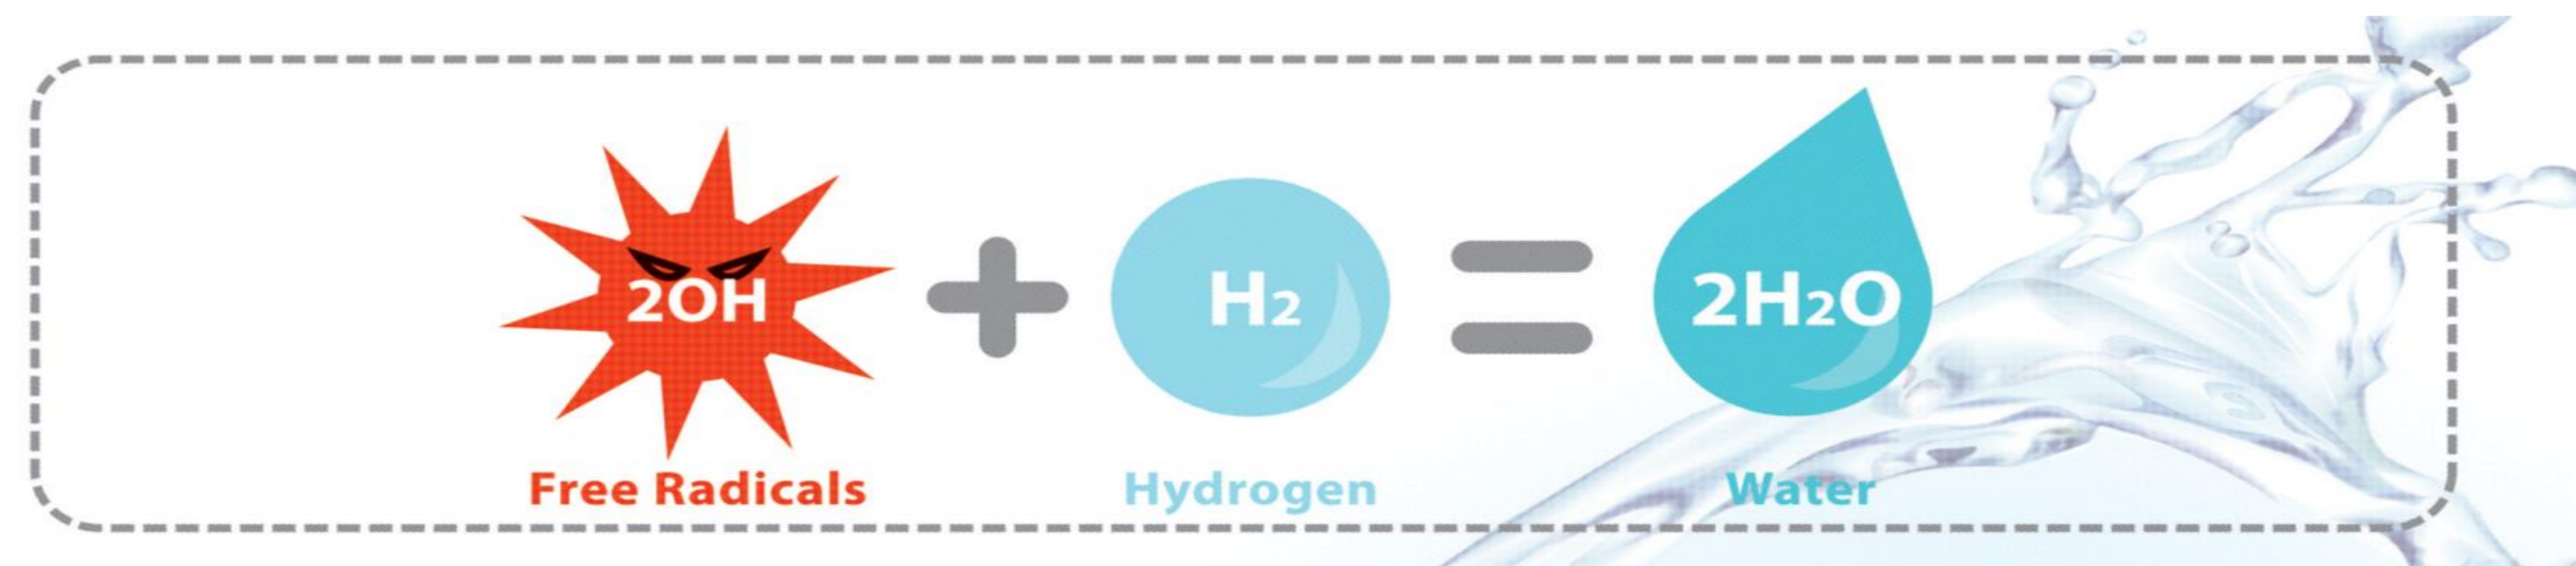

## *Mucous Membrane Inhalation*

*There are 3 ways to consume hydrogen:*

- 1) Drinking hydrogen water*
- 2) Taking supplements*
- 3) Mucous membrane inhalation of hydrogen gas. The third method is the most effective way of consuming hydrogen because hydrogen molecules get absorbed directly into blood vessel, significantly higher absorbing rate and instant result can be achieved.*

# HYDROGEN FACIAL

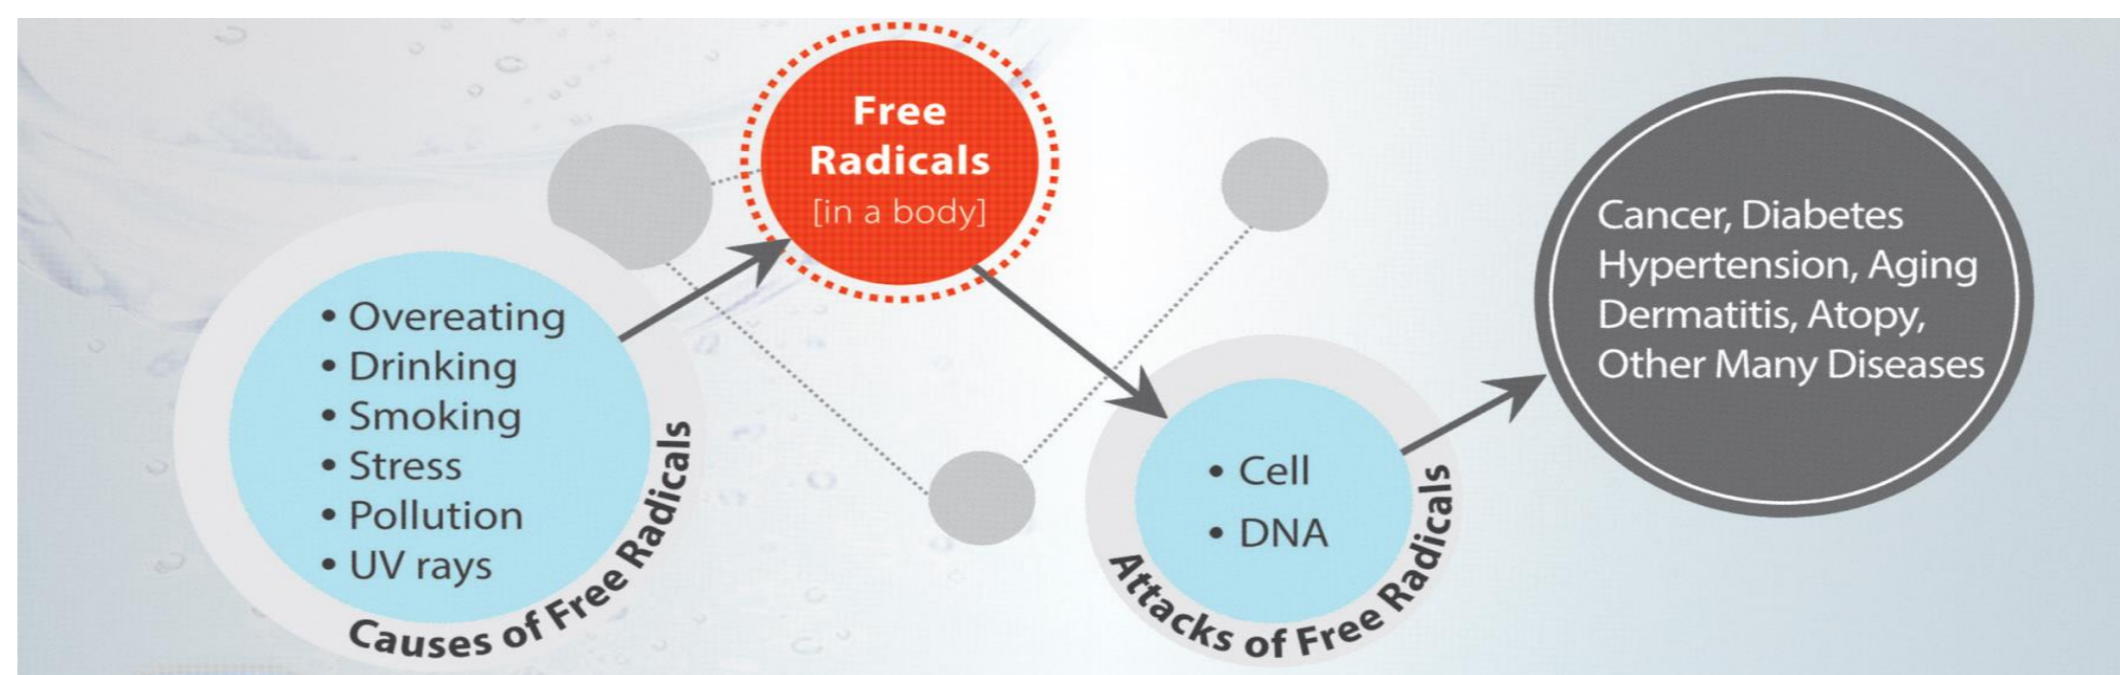

*When hydrogen gas inhaled, the hydrogen molecules combine with harmful free radicals and turns into water. Therefore, the causes of many diseases, harmful free radicals, will be eliminated.*

# HYDROGEN FACIAL

*Free radical produces by metabolism in the body but it also produced by overeating, drinking, smoking, stress, UV.*

*Free radical occurs oxidation in the body and damages DNA and cells, and this causes many diseases and aging. It is well known that about 90% of diseases of modern people are related with free radical.*

**Controls Aging**

**Controls Melanin**

**Accelerates Collagen Creation**

**Calms Down Skin Inflammation**

**Whitening & Moisturizing**

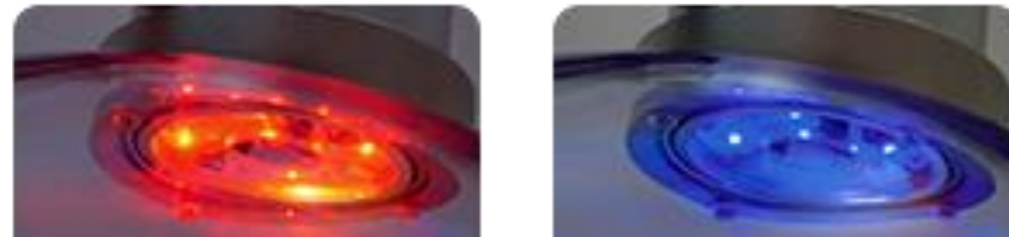

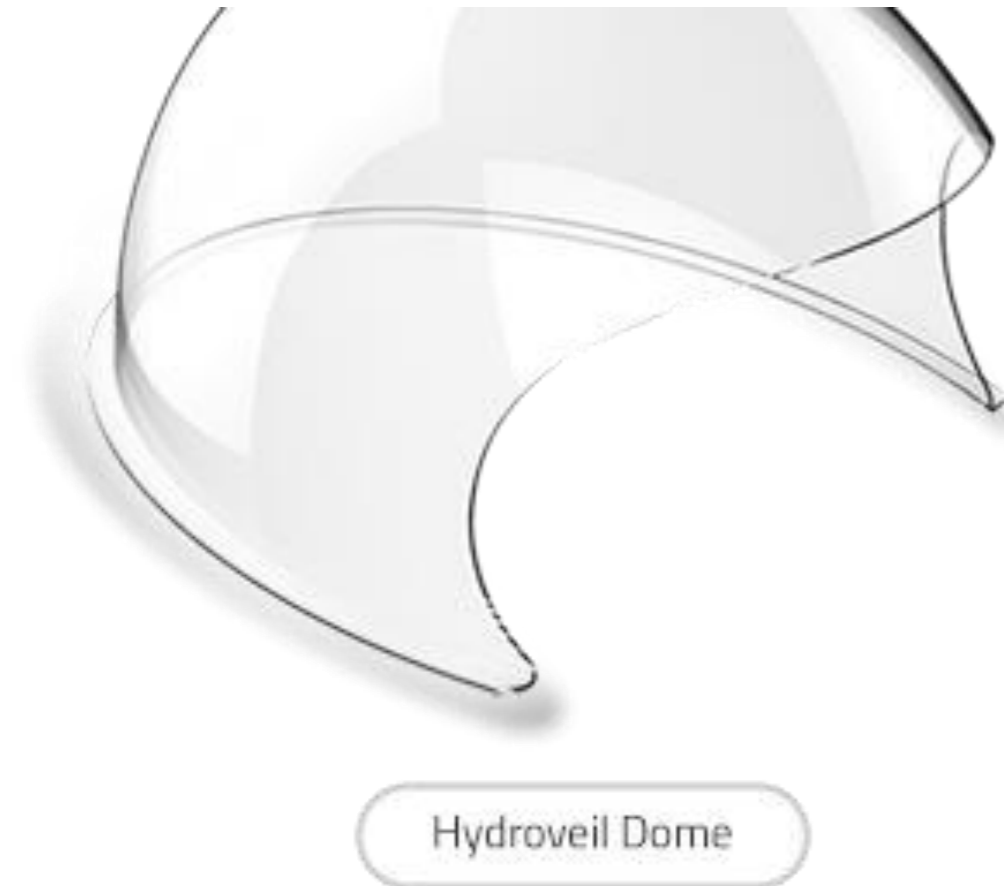

**Prevents Cell Damage**

**Improves Atopy**

# BENEFITS OF HYDROGEN FOR YOUR SKIN

# RED and BLUE LED

---

*Red LED light stimulates collagen, which is important for healing wounds. People who have had surgery for skin resurfacing have also had red LED light therapy after the procedure. Studies have found that this form of light therapy lowers redness, swelling, and bruising, and speeds up the healing process.*

*Blue LED light is most often used to treat acne. It may do this by reducing activity in the sebaceous glands, so they produce less of the oil that can plug the hair follicles, leading to acne. Blue light may also kill acne-causing bacteria known as *Cutibacterium acnes*.*

## ● **New Treatment: Hydrogen Facial**

While everyone is promoting Oxygen Facial and Hydrafacials, introduce Hydrogen Facial as a new service and attract new clients

---

## ● **The perfect add on to your facials**

Get out of the price competition by adding Hydroveil to your facials: Hydrogen, LED and Aroma therapy with no consumables

---

## ● **Patients will love the “Dome”**

Your patients will love the Korean Glass dome as a new kind of facial
