Ms. Beyer is a 46-year-old female past medical history significant for multiple systems atrophy who is presenting to the ED with altered mentation. According to her husband at bedside she had an episode that he describes as a "coma" where she was essentially unresponsive and stiff as a board for approximately a 12-hour duration. Then she finally came to but secondary to her altered mentation as well as associated abdominal pain shortly thereafter they brought her in for further assessment. Work-up has been relatively benign. She denies any recent medication changes or alterations. She denies any recent illness. Her only complaint on assessment is that she has some localized tenderness with point palpation musculoskeletal he. She is slow to respond. According to her husband, this is at relative baseline. Work-up has been relatively benign. She follows with a local neurologist as well as Vanderbilt with regards to her MSA

Patient admitted to the hospital after having a

Reason for Visit

dropped off at front door, un responsive but breathing

Discharge Diagnosis

Altered mental status, 02/14/2022

period of time with altered awareness and decreased responsiveness. By the time the patient initially presented to the hospital her symptoms had a complete essentially resolved. Patient was evaluated by neurology who felt this was likely correlated with her multiple system atrophy. An EEG was ordered initially to further assess to ensure no underlying seizure-like activity which could be instigating her symptoms. EEG was completed. She is overall medically stable to discharge and follow-up with her neurologist in the outpatient setting
