

Happy New Year Thursday, July 30, year 250, Lunation 2,795 Buck Moon of the Peaceful Democratic Secular Republic of the United States of America in the Fourth Hellenistic Period of Natural Revelation Kyle David Aaxton stands before the Wizard of Oz Museum in Wamego, Kansas while he ponders how the unregulated development of Artificial Intelligence threatens humanity's core in a similar fashion to the steel nail that impaled his anus, passed through the pelvis, and punctured an exit wound near his male genitalia forty-four years prior in year 206 USA/1,982. Today is also the seventieth anniversary when President Dwight Eisenhower of Kansas and Congress ignored the Constitution's First Amendment by changing the de facto national motto *E Pluribus Unum* to codify into law the Christian "In God We Trust" motto. The year was 180 USA, also known as year one thousand nine hundred fifty-six *Anno Dominio* - year domination - as prescribed by Vatican castle in Rome, Italy.

Kyle meets the world for the first time on the nineteenth day of May year 202 USA/1,979. His fragile new life, the last year of Generation-X, entwines with the American Family's struggle for self-determination. Would the United States of America submit to a foreign king called the Pope and his Anno Dominio - year domination? Would the Cold War era Russian Soviets destroy American Democracy by installing the baby-boomer Soviet lover President and pedophile Donald John Trump, who could consolidate power to become king of America? Could this new-born child of a United States Army soldier survive childhood? Would he survive the Covid-19 Pandemic to defeat the authoritarian world powers and save American Democracy by uniting the citizenry against religious and political tyranny? The Heavenly Space Ship Earth required a warrior strong enough to carry the weight of all the world's Democracies upon his or her shoulders. A warrior sufficiently civilized who could stabilize the post-World War Two international order. A jovial academic capable enough to prevent World War Three, nuclear winter, and the Dark Ages second coming, the U.S. and the entire world seeks.

Personalities are not fabricated. They are inspired. The spirit, a person's soul is the cerebellum which controls breath, heartbeat, reflexes, fight-or-flight, et cetera. The cerebrum, the top part of the brain, contains the personality, conscious thought processes, and external communications. The cerebrum receives permission from the smaller cerebellum as long as no emergency exists. Sensitive cerebellums manifest emergencies even though none exists. Anxiety is the continuous emergency of the cerebellum. Successful warriors quash anxiety. They sooth cerebellum reflexes through training. Cerebrum introspection alleviates cerebellum overrides.

Religions manipulate the cerebellum with frightening stories of skywizards along with imaginary friends and imaginary enemies. The power of religion requires newborn babies to receive the scary stories or destroy the adult cerebrum until it accepts. Societal forces obligate the members to believe the stories are true even though they are mythological fantasies. Religions inspire submission to the folkloric-mythological storytellers. Those who refuse to respect the religious stories are called atheists and agnostics. In general, human societies divide between religious sects with atheists and agnostics mixed in among the groups. People are Jewish or a gentile. He or she is a Christian or a devil. Are you Muslim or a kāfir infidel? Are you a member of the in group Operating System or the out group, a different Operating System (OS). Atheists resist religious Operating Systems of mythological storybooks. Agnostics, however, are unsure if a storybook skywizard exists or not. The Christian cerebellum and cerebrum are programed with the Bible Operating System. The Muslim cerebellum and cerebrum are programed with the Quran Operating System. The Hindus are programed by the Bhagavad Gita Operating System. The Confucianism Operating System exists in China. The Zen Buddhism Operating System originated in Japan. Many more Operating Systems exist comprised of folkloric and mythological stories.

In addition to folkloric-mythological story Operating Systems that try to dominate both the personal level and the national level, the Democratic Operating System and the Communist Operating System also exist on the national level. Democracy developed 2,600 years ago in the country Helleneida, also known as Greece. Countries craft their own custom Democratic Operating System to choose the people who administer life to the country's family. The group of administrators we call a sovereign government. Democracies usually are secular in as much as they do not endorse a mythological religious storybook Operating System. Yet, Democracies permit the population to practice a variety of personal Operating Systems. The Communist Operating System on the other hand, refuses all other Operating Systems. Communists obligate the population to be atheists, for they refuse religious skywizard Operating Systems. While Communists might be atheists, not all atheists are Communists. Moreover, all people are born atheist. People are born without an Operating System.

The Heavenly Space Earth has many human Operating Systems (OS). The Scientific Operating System neither has dictators nor kings. The facts dictate, not the person. The Science OS is a system of honesty with the mathematics language at its core. Mathematics, the non-conversational language, maintains rigid honesty by lacking conversability. In science the hypothesis or idea initiates the process. Next, test the idea and collect data. A predictable pattern that can be repeated is sought. If a predictable pattern follows the reproducible method, then the hypothesis advances to become a theory of truths. Over the long term a theory can become a scientific law if no errors or exceptions are found in the predictability. Science can augment the Democratic Operating System when people personally practice the Scientific Operating System. Caution, Political-Science Operating System, however, manipulates and even destroys the Democratic OS. The Political-Science OS can be used to create and enforce religious kingdom Operating Systems. The PolySci OS is dangerous to Democracy.

Democracies dominated by folkloric-mythological religious Operating Systems inevitably converts into kingdoms or dictatorships. Religious Operating Systems usually refute Science, for religion demands skywizards be responsible for everything including the formation of the Heavenly Space Ship Earth. The storytellers who administer the religious Operating System pontificate that the skywizard chose a specific man to be king, for example the Pope in Vatican Castle. Submission to the skywizard is mandatory and by extension to the man who embodies the stories symbolized in his kingly crown or tiara. The United States of America never has had a king, but could the nation leave the Democratic revolutionary ideals for the blind devotion to a Christian king? Twenty-four trips around the sun prior to Kyle inhaling his first breath, Christian Fascism firmly sank its talons into the American Democracy; Flag Day June 14, 177 USA/1,954 President Eisenhower signed into law the Pledge of Allegiance with the additional words "under God." A Christian kingdom began growing inside America.

Born atheist as everyone is, Kyle Aaxton learns the Democratic Operating System in the American Manhattan and Ogden Unified School District 383 of Kansas. At the University of Kansas he obtains the Scientific Operating System of Physics. He observes life on four continents of the Heavenly Space Ship Earth. He survives three kingdoms: Catholic Vatican Castle, Muslim Saudi Arabia, and the Catholic Spain. Persistent sabotage by the kingdoms and the Republican American government he survives. Child abuse and family sabotage he overcomes to develop a Fountain of Youth that resolves the medical mystery Fibromyalgia. He enchants the world with his love story for his female partner Julie Gacusan Ramos of the Philippines, who is also a protagonist in the book "...Y Volcanes en el Mar," by José Enrique Gil-Delgado Crespo. Kyle formalizes his simmering Spanish Inquisition War, and is victorious against Pope Francis. He is victorious over King Felipe VI of Spain for legal corruption and for the love of Julie. Physicist Kyle did not build the nuclear bomb; J. Robert Oppenheimer did. Kyle survived the

story bomb. You are reading the real life true stories of Kyle David Aaxton as written by him. Can he prevent an American civil war, deter World War Three, avoid nuclear winter, reverse global warming, save Democracy, and contain Artificial Intelligence (A.I.) development by writing his life story? Will he reveal the answers to Fibromyalgia? Time will tell if continues walking the earth free long enough.
