Rogue American physics graduate of the University of Kansas and raised in Kansas Kyle Axton goes on walk about of the world and collects a few important souvenirs along the way. Most notably is the Muslim ID card from the Saudi Ministry of Religion. Other notables are Spanish fluency at the level of medical and legal practitioner. All of this was accomplished by an atheist diehard scientist.

Mr. Axton has nearly completed his first book the autobiographical legal novel called the *Querella*. Currently the book is in the Madrid court system being evaluated. He also has taken the initiative to use this as the base for his first book of stories that will culminate in a science fiction novel with the hopes of uniting the democratic triumvirate of the United States government and our fellow citizenry. The abolitionist won. The republican slave owners will not overthrow the king of the world the U.S. Government. The president is a servant, not a confidence artist. We shall unite the western world to combat climate change and the Asian nuclear triumvirate: Russia, China, and North Korea.

Mr. Axton proposes writing this book during the next six months in hopes of publishing it before the mid-term elections. The author will be the nom de plume "Pirate Legnahaf" and tell the adventures of Gastón A. Legnahaf. Mr. Axton embodies the boldness of a pirate combined with not only a left foot prosthesis, but also the bold extroverted bravado of a scientific-know-it-all-underdog trying to fight his way into the middle class by embarking on yet another globetrotting odyssey prior to the November election taking office in the year 2016. The odyssey begins in San Diego California where Mr. Axton is searching for a job after recovering from Fibromyalgia when he meets Pandora, a Saudi virgin physicist 12 years his junior of 35 years. She loved fast motorcycles and had an imagination capable of fitting both physics and the memorized Quran inside. Unfortunately this intercultural love story unravels when his leg is amputated in a motorcycle crash precipitated by a road rage incident that triggered his fight or flight response. California's Obama care saved his life with a great prosthesis and decent medical care, despite the arrogant doctors.

Needing a job he moved to Saudi to teach Science in a prisonlike environment and also to pursue Pandora. He achieved the Muslim ID card from the Saudi Ministry of Religion quite easily. He has pictures from Makkah (Mecca) and Medina. He despises religion; however, she was worth the torture. The mission failed; the memories live on forever.

Mr. Axton possesses a great diplomatic power with the card. He is able to attend Hajj. He has replaced Pandora with a Saudi born Nigerian passport holder and medical physics graduate, Dana Curie. Dana is his secretary and second Muslim physicist from Saudi. She speaks fluent English and Science. She memorized the Quran and was raised in Makkah. Currently she lives in Riyadh. Dana will be a most willing guide to Hajj and her father will permit it. Mr. Axton is confident he skillfully can turn this into a coup for western civilization. He has assembled a magnificent team of individuals willing to help in this science fiction novel that could also be turned into a documentary of visiting the most holy shrines in all of western civilization. They are all characters in the book already. Somehow by random coincidence all pieces fell into place.

Mr. Axton is a product of the scientific Socratic American education system. Despite its high economic burden he did complete a Bachelor of Arts of Physics at the age of 30. He discovered his academic passion for physical science in Art history class in the JCCC community college. He originally aspired to the B.S. of Physics, but

Fibromyalgia would strike him down near the end and thus he switched to utilize the other credits during the medical emergency in the U.S. pre Affordable Care Act. Moreover, Mr. Axton suffered seizures as a toddler. Prior to entering kindergarten, the military doctors removed the phenobarbital and aloud his brain to wake up fully. He was strong enough to resist the kryptonite effect that black pepper corns caused him. And his family just like most American families loved the king of spices: black pepper. When he was thirty years old and on the cusp of completing his marathon to solidify the middle class life style portrayed in Hollywood, the won that the entire world dreams about, just then double setbacks struck. The great recession and a health crises for a graduate with no job, no health care, and nowhere to live became desperation. The Peruvian wife had kicked out the dying American. It was for the best as the Peruvian food was killing him. A decade later at age 40 he would discover black pepper was a bomb in his chemical reactor. Peruvian food exacerbated the problem and American food was impossibly doused in the tasty but offending spice.

His trajectory would begin to swing ever more upward, but many British school obstacles would lie in wait. Eventually they culminated on the island of Ibiza Spain in the Mediterranean. The school gave Mr. Axton an illegal government contract of 11 months probationary period for the entirety of his contract when 3 month is the maximum allowed by law. On top of that, the school fired him after he was vaccinated the received medical leave from the government doctor.

Once his brain was on, he discovered the days of the week had names and glorious mathematics. Spelling is detestable, but math poetry. Newtonian physics was easy. Old rusty cars and houses were his experimental toys from the age of five. With an alcoholic self-castigating father who collected old Junker cars and leftovers from the Military base as a provider, Mr. Axton always had plenty of unusual mechanical distraction about. His educated mother suffered trichotillomania and exhaustion. Noticing the difference between sane families and his was quite obvious by the age of seven. The wayward son is estranged from his family.

The curse of military industrial complex that befell his parents has not befallen Mr. Axton. He turned his curse into a voyage to find his path in life. He explored philosophy, logic, art history, the humanities, history, musical instruments, foreign languages, exotic cultures including Taiwan, and of course all the sciences: astronomy, biology, chemistry, and physics the mother of all science.

After the university and during the great recession he put his language talents to use as a translator and interpreter. A physics degree was a bit of overkill but the knowledge to work in judicial, medical and social environments was a unique learning experience pounded into the brain bilingually. The bumble designed BMW motorcycle was the crotch rocket of commuting choice. The hill country of Texas was far more interesting than Kansas. Southern California though was multicultural paradise on the West Coast. So Mr. Axton migrated there once his fibromyalgia was under control. Cali had Obama care and Texas refused. The choice was simple, but the drive long in the F-150 pulling a motorcycle trailer.

Three more events would point his time arrow towards Europe via Saudi Arabia. The meeting of the Saudi physicist, the amputation that subsequently leaves him adrift living in his F-150, and the rise of Trump that signaled the civil war slavery versus abolitionist politics that lead the war before and Canadian Leonard Cohen told us Everybody Know. He assumes common sense is common but everybody knows it isn't. It's actually the

habitual answer in the given situation if you are familiar with the iconography and the culture. White blonde American scientists with green eyes are exempted while abroad. Hollywood is the great soothers of cultural differences, world wars. The mighty reserve currency helps. Its value is based on how much people desire to live in America; the golden mountain of the new world should be the safest place on earth rather than one of the most dangerous.

The plan is to unite the western world's iconography into one social media campaign in order to combat:

- the Asian communist nuclear triumvirate
- climate change
- and the Confederacy for the final time

and restore America to the PAX Romana as it was designed by the enlightened founding fathers. The book will be a work of science fiction about how humans can avoid climate change to become a solar-system-tourists species able to build a utopia on earth and in the space rather than the slavery dystopic vision offered by Republicans and Jeff Bezos penis rocket. The science appears to be present and Mr. Axton will playfully extrapolate this into an iconographic narrative like Don Quixote de la Mancha.

Mr. Axton plans to take his Muslim Physicist secretary to Rome to begin her enlightenment. Mr. Axton speaks fluent Spanish and the Pope is Argentinian. He thinks he may be able to capture the attention of Jorge Mario Bergoglio who is a trained chemist. In Italy Mr. Axton's friend Tullio of Napoli is a trustworthy guide. The civil engineer turned mathematics teacher speaks fluent English and Spanish.

After Rome, Mr. Axton will visit the Temple Mount and other iconographic places of all three viral mythologies of the first social medium, the book. Antisemitism is due to it being the first viral story started 5,781 years ago approximately. The Christians mythology has been trying to take of the world for 2,021 years and doing the best job thus far. The 3.0 version of viral book monotheism is Islam. Muslim mythology has been trying to take of the world for 1,442 years and succeeding by population numbers and petroleum monopoly. The fourth viral monotheistic book set that is utilized to conquer the world is Karl Marx's Das Kapital. Marxism has been used to make the government the Religion and the dictator the god like benefactor just as Yevgeny Zamyatin predicted in 1921. North Korea perfected the government religious hybrid.

Hitler tried merged the first social medium the book with the new medium of radio in order to promote his book and join all the people in one common iconographic imagination experiment. The entire world joined together to crush Hitler and his nefarious plan to conquer earth. The Bretton Woods System and the Fat Man detonated August ninth 1945 solidified the U.S. Government as the king of the world. Hollywood and music became the great iconographic narrative of the entire world. The world has entered a new viral media era during a delicate time in human history – the possible Holocene extinction. All the previous viral myths have books and are jockeying to use the new internet social medium as a spring board to world domination. To combat this, a new guide book is needed. The Guide to Plundering Ibiza by pirateLegnahaf and the protagonist Gaston Leganhaf promoted by MiamiStyle.eu and youtube channel should be a good start to humorously unite varying cultural iconographies towards creating heaven on earth rather than hell on earth offered by the

Republicans, Communists, and Muslims. Mark Zuckerberg wants to depress people into his metavers for further brainwashing and bring the Matrix trilogy to life. All of these bad actors can be curtailed by one good book that helps unify the democrats into defeating the slave owning southerners. The second viral myth the bible unites the Republicans. Where is the book to unite the Democrats? There are too many books for there to be a shared imagination, a common sense.

The Chinese are exerting all of their efforts to become equal with America. They are far from equal, yet the three communist nuclear powers could combine into a formidable foe of the U.S. triumvirate government. During this critical phase of global warming, a hot war or a protracted economic war could tip world civilization beyond the limits of survival.
