Investment advisory services offered through Bespoke TFC Capital, a State of Texas registered investment advisor.

This site is published for residents of the United States only. Representatives may only conduct business with residents of the states and jurisdictions in which they are properly registered. Therefore, a response to a request for information may be delayed until appropriate registration is obtained of exemption from registration is determined. Not all of services referenced on this site are available in every state and through every advisor listed. For additional information, please contact Bespoke TFC Capital at investors@bespoketfc.com.

This commentary contains information that may not be suitable for everyone. The information contained herein should not be construed as personalized investment advice. Investing in securities involves risk of loss that investors should be prepared to incur. No investment process is free of risk; no strategy or risk management technique can guarantee returns or eliminate risk in any market environment. There is no guarantee that any investment will be profitable. Past performance is no guarantee of future results. Actual results, performance, or achievements may differ materially from those expressed or implied. The value of investments, as well as any investment income, is not guaranteed and can fluctuate based on market conditions. Information presented herein is subject to change without notice and should not be considered as a solicitation to buy or sell any security. Information is based on data gathered from what we believe are reliable sources; it is not guaranteed as to accuracy, does not purport to be complete and is not intended to be used as a primary basis for investment decisions.

Indices are unmanaged and investors cannot invest directly in an index. Unless otherwise noted, performance of indices does not account for any fees, commissions or other expenses that would be incurred. Returns do not include reinvested dividends.

The Standard & Poor's 500 (S&P 500) Index is a market-capitalization weighted index that tracks 500 leading companies that are amongst the most valuable publicly traded companies listed on the NYSE and NASDAQ exchanges and is representative of the stock market in general.

The Nasdaq Composite index tracks the stock performance of more than 2,500 publicly traded companies whose stocks trade on the Nasdaq exchange.

Smaller capitalization securities involve greater issuer risk than larger capitalization securities, and the markets for such securities may be more volatile and less liquid. Specifically, small capitalization companies may be subject to more volatile market movements than securities of larger, more established companies, both because the securities typically are traded in lower volume and because the issuers typically are more subject to changes in earnings and prospects.

LEGAL NOTICES

Hypothetical portfolios provided are for illustrative purposes only and are not intended to represent the past or future performance of any specific investment. Actual results will fluctuate with market conditions and will fluctuate over time.

Exchange Traded Funds (ETF's) are sold by prospectus. Please consider the investment objectives, risks, charges, and expenses carefully before investing. The prospectus, which contains this and other information about the investment company, can be obtained from the Fund Company or your financial professional. Be sure to read the prospectus carefully before deciding whether to invest.

Rebalancing/Reallocating can entail transaction costs and tax consequences that should be considered when determining a rebalancing/reallocation strategy.

Neither Asset Allocation nor Diversification guarantee a profit or protect against loss. They are methods used to help manage investment risk.

Options are not suitable for all investors. There are risks involved in any option strategy. Individuals should not enter into option transactions until they have read and understood the option disclosure document titled "Characteristics and Risks of Standardized Options," which outlines the purposes and risks of option transactions. This booklet is available from your Investment Advisor or at http://www.theocc.com/about/publications/character-risks.jsp. Supporting documentation of claims will be supplied upon request.

The VIX Index is a calculation designed to produce a measure of constant, 30-day expected volatility of the U.S. stock market, derived from real-time, mid-quote prices of S&P 500® Index (SPX^{SM}) call and put options. On a global basis, it is one of the most recognized measures of volatility – widely reported by financial media and closely followed by a variety of market participants as a daily market indicator.

Portfolio recommendations are subject to change without notice. All recommendations are based upon our experience and may or may not have been profitable in the past, now or in the future.

Fixed income securities are subject to increased loss of principal during periods of rising interest rates. Fixed income investments are subject to various other risks, including changes in credit quality, liquidity, prepayments, and other factors. REIT risks include changes in real estate values and property taxes, interest rates, cash flow of underlying real estate assets, supply and demand, and the management skill and creditworthiness of the issuer.

LEGAL NOTICES

A REIT is a security that sells like a stock on the major exchanges and invests in real estate directly, either through properties or mortgages. REITs receive special tax considerations and typically offer investors yields, as well as a highly liquid method of investing in real estate. There are risks associated with these types of investments and include, but are not limited to, the following: potential difficulty discerning between routine interest payments and principal repayment; redemption price may be worth more or less than the original price paid; value of the shares in the trust will fluctuate with or without the portfolio value of underlying real estate; refinancing risk is a function of mortgage fund leverage ratios, interest rates, operating expenses, cost of insurance, potential lease terminations, potential economic and regulatory changes, etc. This is neither an offer to sell nor a solicitation or an offer to buy the securities described herein. The offering is made only by the Prospectus.

Investments in commodities may have greater volatility than investments in traditional securities, particularly if the instruments involve leverage. The value of commodity-linked derivative instruments may be affected by changes in overall market movements, commodity index volatility, changes in interest rates or factors affecting a particular industry or commodity, such as drought, floods, weather livestock disease, embargoes, tariffs and international economic, political and regulatory developments. Use of leveraged commodity-linked derivatives creates an opportunity for increased return but, at the same time, creates the possibility for greater loss.
