

SUPERIOR IMAGE QUALITY

SETTING NEW STANDARDS IN MOBILE PRACTICE

"We have been looking for a high quality, fully mobile video-endoscope, with good ability to annotate images for use for pre-sales video-scopes for horses going to public sales and for private vettings for several years, but have been unable to find a suitable system. The medview system is good to use, and there is significantly less equipment around the horse when performing video-scopes in horses compared to using standard video-scopes. The images and videos are easily saved and transferred to computers etc. Primarily this will be used for pre-sales video-endoscopy for thoroughbred sales (particularly yearlings) at public auction. This medview DV2 has fulfilled our requirements, and as a result we are delighted to have purchased this system."

IAN CAMERON - ROSSDALES NEWMARKET

"I use the medview DV2 daily, in pre and post-race scoping of racehorses. It has been a very useful tool in assisting owners and trainers in decision making. I can quickly send a short video or picture via my phone - a picture paints a thousand words. The 2.8mm tracheal wash channel sealed the deal in my decision making. The scope is very simple to use and I am extremely happy with the product and service. We have had a fantastic service provided from start to finish by Michael and would highly recommend!!"

PETER HYNES - YORKSHIRE EQUINE PRACTICE

"I consider the medview DV1 endoscope to be a big leap forward in the development of endoscopes for equine ambulatory work and I get fantastic pictures. The DV1 allows me to perform all the functions I wanted it to. I primarily use the scope for upper respiratory examinations, the system is easy to use."
