

Artyfacts

We have been learning all about **Shapes!** We learned that artists use shape to create all kinds of designs.

We learned there are three types of shapes. **Geometric**, shapes that have names such as circle, square, triangle etc. **Natural** shapes, shapes found in nature and **Free form** shapes. Shapes that are irregular and nonrepresentational.

Here are some highlights from each class.

Three's discovered **natural shapes** by putting leaf stickers on a plate and then using paint and glitter to surround the shapes. When the stickers were removed the **negative** shape was revealed.

Pre-K made **Geometric shape** creations by **printmaking** with multiple sized Legos and hair rollers.

Kindergarten worked with **Free form shapes** to create fantasy creatures. They first cut out free form shapes and then added details with markers to finish out their creatures.

Next, we will be learning about Color theory. Check back to see our progress.

Keep creating,

Kim
