

SERVING YOU

4: SECURITY AND SAFETY REGULATORS

Install smart cameras and sensors capable of detecting motion, and suspicious sounds, and recording unwanted activity in your properties. Furthermore, include temperature, smoke, and water leak sensors that will detect and alert you for water leaks, and fires, and adjust your smart aircon to fit your desired home temperature.

WHAT WE DO

We are an IT servicing company dedicated to making your home smarter. We work with installing smart devices in your home to make your day-to-day more convenient, safe, and secure.

VALUE WE OFFER YOU

1: REMOTE PROPERTY MONITORING

With our Smart Home technology solutions, you can monitor the activity of your properties from anywhere in the world. Whether it's checking all lights are off, making sure curtains are closed, or more; all can be done with a smart home.

2: UNIQUE TENANT EXPERIENCE

Connect any tenant to the smart homes we set up for you with whatever access levels you wish to provide them! The unique experience you can offer your tenants with a modern smart home twist can give them an unforgettable experience and can be used to market your BnB to stand out more.

3: SMART PROPERTY AUTOMATIONS

After installing your smart home, set up your home automations as you please. Set your yard lights to turn on and off at certain times of the day, as well as close your curtains, feed the dogs, and set your alarms.

HOMES

THE END VISION FOR YOU

Imagine a burglar breaking into one of your properties, threatening the security of your property, its items, and tenants that may be staying there.

These are the benefits a Smart Home adds that prevent and alert you against scenarios like this:

You, along with any people you enable, will receive alerts of security breaches immediately.

Automating the curtains and lights will give the appearance of people at home, even if no one is there.

Setting up a fully kitted smart home would be similar to just installing wired cameras and sensors in a home. For the same price of your safety, you'd get more functionality and home automation, with remote control and monitoring.

With an interconnected chain of smart home properties, they will be easier to manage, increase security and safety, as well as provide people with a unique living experience.

OUR MISSION

To empower homeowners with cutting-edge technology solutions that enhance comfort, security, and energy efficiency, ultimately creating smarter, more connected living spaces.

OUR GOAL

With technology growing every day, we noticed the lack of smart home technologies and services in South Africa. We have therefore made it our goal to bring smarter homes to fellow South Africans in an affordable manner, one household at a time.
