Hague Equipment Company of Michigan, Inc. has been supplying air and gas compression systems in Michigan for over 30 years. We manufacturer sell and service systems that enhance natural gas & oil production, re-inject H<sub>2</sub>S and CO<sub>2</sub>, recover and recycle vapors, evacuate tanks, boost pipeline pressures, and process gas in plants. From inert gasses to methane, ethane, propane, hydrogen, ammonia... and complete plant instrument air systems we do it all. We can recommend, design, and manufacture a system suited to your specific needs utilizing the most appropriate and efficient lubricated and non-lubricated single or multi-stage compressors available, including reciprocating, rotary screw, lobe, vane, and liquid ring compressors, driven by energy efficient electric motors, or fuel-efficient emissions compliant internal combustion engines.
