US&R GENERAL MEMORANDUM – 2016-072

September 6, 2016

FOR: National Urban Search & Rescue Response System
Task Force Representatives

FROM: Dean Scott, Chief
Operations Section
Urban Search and Rescue Branch

SUBJECT: US&R General Memorandum 2016-072 – 2016-2025 US&R Rotation Models

This General Memorandum publishes a new National Urban Search and Rescue (US&R) Response System's (the System) 2016 through 2025 US&R Rotation Models to facilitate both deployment and long range planning activities. This version replaces all previous published Rotation Model versions.

In 2015, one Central Division task force was removed from the System. In June of 2016, New Jersey Task Force One (NJ-TF1) was named as the replacement task force and was added to the System's East Division. Adding NJ-TF1 resulted in a need to realign the Rotation Models to move the "10th" task force from the Central Division to the Eastern Division. This change was calculated beginning in June 2016 when NJ-TF1 was added to the System and placed at the bottom of that month's rotation schedule.

The purpose of the US&R Rotation Model is to reduce subjectivity in System resource activations. The US&R Rotation Model does not serve as approval for activation but instead facilitates Incident Support Team (IST) and task force planning, training, and maintenance scheduling, by enabling IST personnel and task forces to know when they are most likely to be activated if an event requires System resources.

System IST rotations are listed in the first and last row of each annual Rotation Model. Each column represents a month and is identified by a color (red, white, or blue) which signifies the on call IST for that month. With the issuance of US&R Program Directive (PD) 2011-023 - *Revised Annual IST Rotation*, the on call IST for the month of December will also be the on call IST for the following month of January. This ensures that the three IST's on call status rotates through different months each year instead of each IST having the same months every year.

System task force rotations are listed in monthly columns on each annual model, with the columns consisting of ten rotation blocks labeled "1st" through "10th". Each rotation block is made up of three rows representing the System's three regions (West, Central and East). These ten rotation blocks make up the rotation order for each monthly column, and every column contains all 28 System task forces. Each month task forces move up one rotation block until reaching the "1st" block, after which they move back down to the "9th" block ("10th" block for Eastern Division task forces), starting the process over again.

Based on the requirements of an event, the US&R Branch will alert or activate the System resources it deems necessary. Initial actions will include:

- alerting or activating the on call IST – based upon the color of that month's column

- alerting or activating task forces – using the process established in US&R PD 2014-018 – *Event Resource Selection Process*, the geographically closest operationally deployable task forces will be utilized first, as determined by FEMA

Beyond the criteria established in PD 2014-018, the US&R Branch may refer to the annual US&R Rotation Model for subsequent resource activations adhering to the following considerations:

- If an additional IST is required, the next Month's on call IST will be utilized first, followed by the remaining IST.

- Activations from the Rotation Model will start with the geographically closest task force in the "1st" rotation block, for the current month's column.

- The task forces in the "1st" rotation block will be used in order of proximity to the incident – geographically closest first.

- If the "1st" rotation block contains less than three task forces (e.g., one was deployed as immediate need, non-deployable, or activated as an in-state resource), all remaining task forces in that rotation block will be utilized before moving on to the next rotation block.

- After all of the task forces in the "1st" rotation block for that month are activated, the process will be repeated utilizing the "2nd" rotation block, and then any additional rotation blocks until the required number of task forces have been activated.

This protocol balances the immediate needs of survivors (by activating the geographically closest task forces first) with the need to maintain an established methodology of activation that considers all System resources.

Attachment: 2016-2025 US&R Rotation Models (Jun16)
