Your doctor can change your game.

20/20 vision is only the starting line

With Sports Vision EyeQ and EyeQ Trainer, your doctor can identify your vision strengths and areas for improvement to raise your performance to the next level.

1. Measure athletic potential.

With a 5-minute EyeQ test, identify your vision strengths and weaknesses impacting your performance.

2. Compare to peers and pros.

See how your personal scores measure up against those of peers and elites.

3. Improve with EyeQ Trainer.

Boost your ability with easy-to-master training drills that you do at home.

4. Measure progress.

Retest with Sports Vision EyeQ at your next appointment.

In sports, almost 80% of perceptual input is visual. But even 20/20 vision does not mean athletes are performing at their peak.

In sports, objects don't just sit there. They move. Fast. Regular eye exams may reveal that you can see clearly, but they can't tell how well you ascertain where a ball is in space, how fast it's traveling or if it's changing direction.

RightEye precisely measures the specific vision skills that affect reflexes and hand-eye coordination, including:

- Eye movement speed
- Processing speed
- Dynamic visual focus
- Smooth visual pursuit
- Discriminate reaction time
- Choice reaction time
- Binocular vision skills
- Visual concentration
- Contrast sensitivity

Don't just sit there.

RightEye Sports Vision EyeQ measures and analyzes your eye movement, brain processing and reaction time against peers, amateurs and pro athletes. When RightEye identifies opportunities for improvement, it customizes an exercise plan from an online library of 150+ training drills.

Your doctor will measure progress in the office. You'll measure it on the field!
