

20/20, BUT STILL HAVING ISSUES?

Give us 10 minutes to show you why.

Our world is far from static. From driving a car to reading a book and beyond, life's most basic activities require a complex range of dynamic vision skills — skills that an eye chart alone cannot measure. When these skills are out of sync, it can impact you in big and often unexpected ways. But in just a few minutes, a RightEye EyeQ™ test could find an underlying problem with your functional vision — and help transform your life.

Ask us about RightEye today.

A new eye test could change your life.

Your vision needs more than 20/20

Your two eyes and brain must all work together to navigate the world and it's this connection that makes up your functional vision. Today's standard eye exam, however, only checks your eyes' physical health and ability to focus on stationary objects — it doesn't measure critical dynamic vision skills such as eye teaming and eye movement.

Now, thanks to RightEye's state-of-the-art eye-tracking technology, your doctor can also analyze your functional vision and brain health using a Functional Vision EyeQ test.

50% of vision disorders go undiagnosed

90% of all concussions result in eye-movement dysfunction

1 in 4 children has a vision problem that affects learning

Signs you may have a functional vision problem:

- Difficulty concentrating
- Rereading or skipping lines of print
- Short attention span
- Poor reading comprehension
- Poor coordination or balance
- Slow completion of work
- Previous brain trauma (concussions, strokes)
- Loss of interest in reading
- Headaches
