

Introducing StaClear® Luer Lock Syringes

RC OUTSOURCING'S NEW SYRINGE FOR REPACKAGED AVASTIN® (BEVACIZUMAB)

New Design. Superior Precision. **Less Dead Space.**

StaClear® is the first syringe to meet the FDA's requirements for an intravitreal indication and meets the strict particulate standards for intraocular medical devices. The StaClear® lives up to its name with a list of benefits and valuable features to make a significant difference for your patients, especially the luer lock design. The luer lock model creates the most secure attachment to a needle while providing less dead space and less waste.

FDA-cleared for intravitreal injections (510K 200242)

Features and Benefits¹

- **100x fewer particles than generic syringes**
Coating is anchored to the walls of the syringe versus liquid silicone oil in generic syringes
- **A more controlled injection experience**
Elastomer piston ensures sealing integrity
- **Easy-to-read graduation marks**
This enables precision dosing (0.25 mL syringe with 0.01 mL graduations) vs. generic options
- **Ophthalmic-safe materials**
Meets chemical and biocompatibility standards for ophthalmic use
