

# **OneKnot**

## **POLYESTER**

### **DEVICE DESCRIPTION**

OneKnot is a suture with a pre-tied knot for surgical closure and fixation. The OneKnot device provides a single pre-tied sliding and locking knot that enables easy and fast tissue approximation and fixation with a surgical knot.

OneKnot Polyester consists of a polyester suture armed with a surgical needle and a pre-tied, open knot. The suture is a non-absorbable, green braided polyester suture with a silicone coating, medical silicone elastomer MED2174.

OneKnot Polyester is available sterile in various product lengths and USP sizes 0 through 5-0. It is single armed and offered with a variety of needle sizes (see TECHNICAL INFORMATION).

Refer to the use directions and illustrations below for use of device.

### **INTENDED PURPOSE**

OneKnot Polyester is intended for use in general soft tissue approximation and/or ligation, excluding any use in cardiovascular, ophthalmic and neurological procedures. OneKnot delivers a single knot and is intended for single use only.

### **INDICATIONS**

OneKnot Polyester has been developed for fast and efficient placement and closure of surgical knots anywhere the use of non-absorbable sutures is appropriate. The non-absorbable suture may be removed upon healing or left in place indefinitely.

### **PERFORMANCE**

The polyester suture elicits a minimal initial inflammatory reaction in tissue, which is followed by a gradual encapsulation of the suture by fibrous connective tissue. The polyester herein is not absorbed, nor degraded or weakened by tissue enzymes. The polyester fiber suture material is pharmacologically inactive. Because of its relative inertness and lack of adherence to tissue, the polyester thread may be removed easily and painlessly, and is hence effective as a pull-out suture.

### **CONTRAINDICATIONS**

Use in patients with known sensitivities or allergies to polyester and/or silicone.

### **WARNINGS/ PRECAUTIONS**

Users should be familiar with surgical procedures and techniques involving non-absorbable sutures prior to employing OneKnot. Misuse of this suture, like any other suture, can result in severe injury or death to the patient. When handling the suture, care should be taken to avoid any damage of the material from handling of surgical instruments, such as forceps or needle holders.

Care should be taken when handling surgical needles. Grasp the needle at approximately  $\frac{3}{4}$  distance away from the pointed end in order to avoid bending or breakage of the needle. Users should exercise caution to prevent needle-stick injury. Used needles should be discarded in sharps containers. Do not resterilise or reuse the device.

### **MRI SAFE**

Polyester suture in the body poses no known hazards resulting from exposure to any MR environment.

### **POTENTIAL ADVERSE EVENTS**

Adverse reactions associated with use of this device include minimal initial inflammatory tissue reaction and transient local irritation at the wound site.

Any adverse reaction related to the use of this device must be reported to the legal manufacturer, Clouz GmbH, and to the national competent authorities.

### **STERILITY**

OneKnot is sterilised by Ethylene Oxide (EtO). Do not reuse or resterilise. Attempts to reuse or resterilise the device may result in patient harm, device malfunction, or inadequate sterilisation. Do not use if packaging is damaged or has been unintentionally opened before use.

### **STORAGE**

Store OneKnot in a dry place outside of direct sunlight and other heat sources. Do not use after the expiry date.

### **DISPOSAL**

Please dispose of this product or waste material with particular care due to the potential risk of contamination and/or injury. Used needles should be discarded in sharps containers. Improper handling of waste may have negative effects on the environment and on human health. Observe the specific national regulations.

### **WARRANTY AND LIMITATION**

Clouz GmbH warrants that each component of this product has been manufactured, packaged and tested with all reasonable care and will be free from defects in workmanship and material. Clouz will not be liable for any incidental, special or consequential loss, damage or expense, direct or indirect, from the use of its product. Clouz's sole obligation shall be to replace at its option, any device that we deem was defective at time of shipment if notice thereof is received within six (6) months. User assumes all liability, whether arising on warranty, contract, and negligence or otherwise for damages resulting from the handling, possession, use or misuse of the product. Because Clouz has no control over the operation, inspection, maintenance or use of its products after distribution and has no control over the selection of patients, THIS WARRANTY IS EXPRESSLY IN LIEU OF ANY OTHER EXPRESS OR IMPLIED WARRANTY OR MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE, AND OF ANY OTHER OBLIGATION ON THE PART OF THE SELLER. The remedies set forth in the Warranty and Limitation shall be the exclusive remedy available to any person.

## TECHNICAL INFORMATION

Suture length (cm)	65, 90, 120
Suture USP	0, 2-0, 3-0, 4-0, 5-0
Needle type	1/2 Circle, 3/8 Circle, 5/8 Circle
Needle length (mm)	17, 19, 22, 24, 26, 31, 36, 40
Device Weight (gram)	20
Device Size (mm)	40 x 80 x 2.5

## Glossary of SYMBOLS USED IN IFU AND LABELLING OF PRODUCT

	Needle point: Reverse Cutting		Needle point: Taper Point		Needle point: Taper Cut
1/2c 3/8c 5/8c	Needle curvature		Needle shape		
	MRI safe		Medical Device		

## ONEKNOT DIRECTIONS FOR USE

1. Grasp the needle with an appropriate instrument and pull the suture from the suture pouch.
2. Stitch as required per surgical procedure.
3. To activate knot, pass the needle through the knot holder in direction indicated by arrows.
4. Push down the tip of the paper device and pull suture through the knot loops.
5. Hold the longer thread taut, let go of short end and let the knot slide down to the tissue. Alternatively, hold the longer thread taut and push the knot to the tissue, as appropriate per procedure.
6. To lock the knot, release tension on the long end of thread and pull lightly on the short end.
7. Cut any remaining thread ends and discard needle.
