20" DUAL BEAM 4-FUNCTION LED LIGHT BAR

Part No. 76240

CDN RETAIL \$588.00

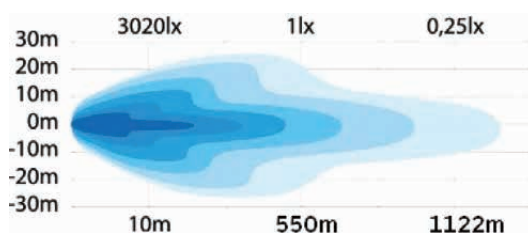

WORLD'S
FIRST

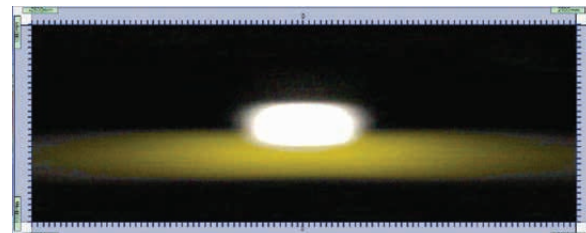

Switching between the powerful white driving light and the focused, low glare yellow fog light allows the driver to adjust instantly to changing weather conditions. The driving light is E-Mark Certified and the fog pattern is SAE/ DOT approved. The Amber strobe lights on each end of the light bar provide additional safety in an SAE/DOT double flash pattern. The two colour, centrally located marker light adds a customization option—you select the running colour—bright white or rich amber. Excellent for fleet vehicles.

There is a **boost** function for the fog light, where you can increase the yellow beam pattern output for improved visibility off-road or in challenging weather conditions. Simply press the fog button a second time on the 4 Position Multi-Switch to activate.

The BrightSource® VEHICLE SPECIFIC KIT

Designed for Canadian vehicles by Canadian drivers

WHAT'S IN THE BOX?

Depending on your vehicle, the BrightSource VSK may include the following components – all designed for simple plug and play installations:

OPTICOUPLER

The BrightSource® Opticoupler is manufactured in British Columbia. It is a control unit designed to optimize your bulb life and performance. This unit is also programmed to move your Daytime Running Light from High Beam to Low Beam (where required). This function ensures you are not projecting a glaring high beam into oncoming traffic. There are other control features built into the Opticoupler to make the operation of your vehicle specific kit as seamless as the OEM headlight.

HARNESS

The correct harness for your vehicle's bulbs is included in the kit and includes a dummy plug to ensure weatherproofing for your exposed connectors (if needed).

CUSTOM DESIGNED DUST CAPS WITH GROMMETS

Specifically designed for your vehicle, these custom dust caps ensure the interior of your headlight remains water-tight. Some LED bulbs have larger bases than the halogen factory bulb and these dust caps provide the clearance to ensure a tight fit for the headlight.

ANTI-FLICKER DEVICES, DIELECTRIC GREASE AND OTHER COMPONENTS

Supplied as needed to ensure the life of your LED bulb upgrades and delivers perfectly, every time you drive.

H11 Input / 9006 Output
Single Unit

Provides a moisture proof barrier that lubricates and protects electrical equipment from salt, dirt and corrosion. 5 gram tube.

H13 Resistor Kit for Dodge, Ram, Jeep & Ford

LED VEHICLE SPECIFIC KITS

3 YEAR WARRANTY

The BrightSource® Vehicle Specific Kits include custom harnesses and wiring solutions for Canadian vehicles – even stubborn Chrysler, Jeep, and Dodge vehicles. Where needed, some kits even include a custom dust cap to provide extra clearance for your new bulbs. This is a complete kit designed to get you the best light output possible, specifically for the vehicles listed below. Check our website for the latest updates.

D5S Bulb 35W 4300K or 5500K

DOT approved street legal upgrade for many 2016-20 Chevy/ GMC pickups. This is a simple swap out with the OE bulb, whiter and brighter than stock. The original bulb will be 25W - 4300K, these are 35W in 4300K or 5500K. We suggest replacing in pairs when upgrading as the older bulb will not match for colour or brightness.

4300K

5500K

D5S43 and D5S55 Colour Comparison Both of these bulbs are brighter than stock so replace in pairs when upgrading.

NOTE: Automatic headlights need to be switched to the ON position for proper function/operation
