

Rohit's project

Is there a life on another planet? How can you be sure?

Yes I do believe there is a life in another planet. I heard it in the news that

planet Mars had life. There is some evidence that they found like water vapor,

imprints of bacteria and that Land Rover sent pictures of dried path of river.

One of the recent news Highlight is scientists have found water vapors and

ice on moon. NASA is trying to find out more planets might exist that have life,

Based on major elements like oxygen, carbon, sulphur etc. NASA is also

developing high tech telescope to see farther than our galaxy that is - Milky

Way to find life and planets similar to ours. I hope my beliefs do come true.
