INTRODUCTION TO DOCUMENTATION

The National Commission on Marihuana and Drug Abuse was established by
Title II of the Comprehensive Drug Abuse Prevention and Control Act of
October 27, 1970 (84 Stat. 1280), to conduct a comprehensive study of
drug abuse and the use of marihuana in the United States. On January 30,
1971, President Nixon appointed nine members and designated Raymond P.
Shafer, former Governor of Pennsylvania, as Chairman. These nine plus
two Members of the Senate and two of the House comprised the Commission.
Its findings are summarized in its reports: Marihuana: A Signal of
Misunderstanding (Washington, 1972) and Drug Use in America: Problem
in Perspective (Washington, 1973).

Because of deficiencies in existing data on marihuana law enforcement practice and general drug law enforcement practice at the state and local levels, the Commission decided to conduct its own surveys of these practices in selected jurisdictions. The Commission staff prepared the research design and supervised the fieldwork by teams of college youth consultants and other selected data collectors. Preparation of the basic data files was contracted to the Institute for Survey Research, Temple University.

Each file consists of a detailed personal profile of each arrestee containing demographic and educational information, employment history, drug use history, past police record, apprehension methods, and final

disposition of the case. The arrestee is not identified. The marihuana law enforcement data consists of records on 3,071 arrests for possession and/or sale of marihuana between July 1 and December 31, 1970, inclusive, in Chicago and Cook County, Illinois; Dallas, Texas; Omaha, Nebraska; San Mateo County, California; Tucson, Arizona; metropolitan Washington, D. C.; and Charlottesville and Albemarle County, Green County, Louisa County, and Madison County, Virginia. It is discussed in "Enforcement Behavior at the State Level," in Marihuana: Appendix: The Technical Papers, II, 612-728, which includes a copy of the survey form. The drug enforcement data consists of records on 5,582 drug arrests made between July 1 and December 31, 1971, inclusive, in the cities of Chicago, Dallas, Los Angeles, Miami, New York, and Washington, D. C. It is discussed in "Selective Justice: Drug Law Enforcement in Six American Cities," in Drug Use in America: Appendix: The Technical Papers, III, 498-650, which includes a copy of the survey form.

All data is in card image form. In the marihuana law enforcement coding and editing manual, the card number is given in the upper left-hand corner and the column number is given in the margin to the left of each question. In the national drug enforcement coding and editing manual the card number is given in the upper right-hand corner of each page and the column number is given in brackets below the card number and to the right of the description or first code of each question.

I. Enforcement Behavior at the State Level

Obtaining figures on the arrests, convictions and seizures of marihuana by the states is more difficult than securing information at the federal level.* The only attempt to compile this data on a national scale is that made by the Federal Bureau of Investigation for purposes of its Uniform Crime Reports.† However, the FBI information concerns arrests only, and not all of the states report these figures. As stated in the 1970 Uniform Report:

Arrest statistics are collected annually from contributing law enforcement agencies and the figures used in the tables this year were submitted by agencies representing 75 percent of the United States' population. In using these arrest figures it is important to remember that the same person may be arrested several times during 1 year for the same type or for different offenses.

The number of state agencies reporting and the population represented by the reports varies to

*The problems are manifold. For example: (1) the laws of several states do not distinguish marihuana offenses from other narcotic offenses; therefore, separate statistics on marihuana offenses do not exist. (2) Some states do not require their law enforcement agencies to report crime statistics. (InTech, p. 70)

†Even under the FBI system a large number of marihuana cases are not counted. The uniform reporting system is a hierarchical system. Only the most serious crime charged is scored and reported; all lesser crimes are buried. (InTech. pp. 80, 81)

some extent from year to year; therefore, each yearly report is based on a different universe. For this reason, precise comparison of data is impossible and the statistics are probably understated.

TABLE A.—State marihuana arrests 1

	Total drug arrests	Percent marihuana arrests	Total marihuana arrests	Percent change
1065	60.500	133	10.015	
1965	60,500	31.1	18,815	
1966	75,900	41.0	31,119	65.39
1967	121,500	50.9	61,843	98.73
1968	198,900	48.2	95,870	55.02
1969	288,600	41.2	118,903	24.02
1970	415,600	45.4	188,682	58.68
4				

¹ Total drug arrest figures are based upon figures submitted by law enforcement agencies which vary in number from year to year. Further, the percentage of population represented by these agencies also varies from year to year. Therefore, it is not possible to achieve precise data, but trends can be indicated.

The most significant finding from the arrest data available for the states is the rapid increase in marihuana arrests between 1965 and 1970. During these years the number of arrestees increased 1,000%. In addition, Table A above shows that

TABLE B.

	Percent of narcotic arrests of total arrests ¹	Percent of marihuana arrests of total arrests
1965	0.92	0.28
1966	1.22	.50
1967	1.86	.94
1968	2.93	1.41
1969	4.02	1.66
1970	5.32	2.41

¹ Does not include marihuana arrests.

Marihuana arrests have increased not only in relation to all drug arrests but also in relation to all arrests at the state and local level. The figures in Table B were taken from the FBI's Uniform Crime Reports table designated "Arrests, Number and Rate, by Population Groups."

According to these figures, in the six-year period pictured, the portion of the crime pool at the state level made up by narcotic arrests has increased 578% and that of marihuana arrests has increased 861%.

In rural areas the increase of marihuana offenses in relation to other drug offenses is considerable. (See Table C)

TABLE C.—Percent of marihuana arrests of total drug arrests in city, suburban, and rural areas

	Percent mari- huana arrests of total drug arrests	City ¹	Subur- ban ¹	Rural ¹
1965	31.1	30.9	35.4	38.4
1966	41.0	40.4	52.0	55.1
1967	50.9	49.4	66.1	61.4
1968	48.2	46.1	60.1	73.2
1969	41.2	39.2	51.5	69.2
1970	45.4	42.7	60.7	75.8

¹ These figures represent the percentage of marihuana arrests for the category of area reporting, e.g., for all cities reporting in 1965, marihuana arrests constituted 30.9 percent of total drug arrests.

.93223 - : r

In view of the deficiencies of existing data collection on enforcement practice at the state level, the Commission decided to conduct its own survey of selected state jurisdictions. A paper by Professors Weldon T. Johnson of the University of Wisconsin (Department of Sociology) and Robert L. Bogomolny of Southern Methodist University (School of Law) analyzes the data collected in this study.

A Study of Enforcement in Selected Jurisdictions‡

Scientific information concerning the pharmacological, psychological and social effects of marihuana only partly answers questions about controlling marihuana use. Attention must also be directed toward the effects of formal procedures designed to control use and distribution of the drug. A sensitivity to the social consequences of existing methods and procedures of marihuana control is reflected in current discussions of the "costs" and "benefits" of marihuana laws and their supporting enforcement apparatus. Common references to "crimes without victims" or the "legislation of morality" or "the crisis of overcriminalization" indicate that many of the questions associated with the marihuana issue are no longer strictly medical or clinical. The marihuana "issue" is increasingly recognized as a straightforward question of social policy: What laws enforced by what sanctions and involving what consequences will enable society to establish and maintain desired conduct in regard to the use and distribution of cannabis?

Possession of cannabis has been subject to criminal sanctions in the United States for up to 50 years. During this period two developments of special significance have occurred. First, the incidence of marihuana use has increased substantially. Second, the incidence of marihuana use has moved across demographic sectors such as age, gender, region, education and occupation. The first development has generated considerable critical comment about the deterrent value of statutes which prohibit use of cannabis. The second has led to more recent concern about the justice of the laws and the operation of the criminal justice system. Whether marihuana statutes can be enforced by the present law enforcement system in a manner

[‡] The data collected in this study were analyzed for the Commission by Professors Weldon T. Johnson of the University of Wisconsin (Department of Sociology) and Robert L. Bogomolny of the Southern Methodist University School of Law, in a paper entitled, "The Crime of Cannabis: From Detection to Disposition." That paper is published in its entirety in this section. Professors Johnson and Bogomolny acknowledge the substantial contributions of Richard Bonnie, Carolyn Jenne, Jaroslawa Johnson and Judy Witherspoon. The Commission acknowledges the assistance of the attorneys who supervised the data gathering at the field level: Geoffrey Smith and Susan Cooper (San Mateo), John Boyer (Douglas County), Andrew Silverman (Tucson), Thomas Decker (Cook County), Robert Bogomolny (Dallas), Jane Lang McGrew (Maryland), Charles Whitebread (Rural Virginia), Patricia Wallace (Washington, D.C.), and Michael Valentine (Northern Virginia).

¹ See part two, chapter I of this appendix.

² Id

consistent with constitutional definitions of fairness and legitimacy raises serious issues.3 Concern has been expressed about the extent to which current marihuana statutes encourage police misconduct, particularly in the area of search and seizure procedure. Another question concerns the selective enforcement of marihuana statutes and the consequences of a law bearing unequally on age, racial and occupational groups. Finally, questions have been raised about whether the criminal processing of marihuana defendants is an appropriate way of handling the population involved. It has been argued that both the stigma and severe penalties associated with marihuana offenses are not only undesirable but also damage the credibility, integrity and effectiveness of the criminal law and its enforcement system.6

A growing sensitivity to these questions has reopened the issue of cannabis. A gradual replacement of incomplete and erroneous information with recent research findings on the effects of marihuana use, together with an increasing amount of first-hand experience, apparently have resulted in ambivalent public opinion. particularly among young persons, concerning the prohibition of marihuana. Among legal scholars and social scientists, the issue of cannabis has reopened along other lines resulting in a new commitment to review and evaluate the marihuana statutes in a way focusing specifically on the relationship between goals and results.

This study aims to provide a systematic description of the experiences, from detection to final disposition, of over 3,000 persons arrested for marihuana offenses. The basic data were retrieved primarily from police, prosecutorial and court records in six metropolitan jurisdictions throughout the United States. The study differs in two important dimensions from previous efforts in this area. First, previous analyses have been limited by both the quantity and quality of observational data. Factual information concerning the process-

ing of marihuana defendants has been generally absent, and most discussions in this area have been based on speculation. Although this study does not solve all of the substantial problems associated with data collection in this area, it has compiled a more systematic data file than was ever done before. The second distinguishing characteristic is the attempt to avoid judgmental analysis. This study aims at description. In many areas of research, competent men of good will disagree about the meaning of basic data. In the area of marihuana, where much of the intellectual give and take has been couched in terms of costs and benefits, alienation and morality, honest differences in opinion may be anticipated. The problem, of course, is that not all persons agree on which consequences are costly or beneficial, what causes alienation and what role public morality ought to play in regulating freedom of choice. Because of these problems such judgments have been left to the reader.

The specific questions which generated this study pertain to how marihuana statutes are enforced. These questions concern a wide range of situations, from circumstances of detection and arrest through prosecutorial and judicial disposition; they focus on not only the behavior of marihuana defendants but also on that of the police, prosecuting attorneys and judges. With varying degrees of success and depth, this research addressed the following questions:

(1) Can the marihuana defendant be described in terms of a demographic profile? Do particular age, racial, educational or occupational groups contribute disproportionately to the marihuana arrest population?

(2) How is the marihuana defendant similar to, or different from, other offenders, the general population of marihuana users, other drug users? Are the marihuana offenders persons who would not otherwise be involved in the criminal process?

(3) What are the circumstances under which marihuana arrestees come to the attention of the police? What kind of investigational strategies are used and which law enforcement agencies are involved in the detection of marihuana offenses? To what extent are arrest and search warrants utilized in marihuana arrests?

(4) What are the circumstances under which marihuana arrestees are apprehended? What are the physical locations of such arrests? What amounts of the drug are seized?

(5) How are marihuana defendants processed? With what offenses are they charged? What is the amount of bail set? To what extent are marihuana defendants charged, dismissed and tried? To what

Although issues identified earlier are implicit in many of these questions, the research attempts to describe, in neutral terms, the operation of the present marihuana law enforcement system. Only after an adequate description of these procedures is formulated, can the consequences and the efficacy of criminal sanctions for marihuana control in the United States be evaluated.

METHOD

The issues outlined above led the National Commission on Marihuana and Drug Abuse to design a research project which would develop statistical data on arrests of marihuana offenders in the United States. The study began within the Commission in the late spring of 1971 and later required the involvement of many other persons outside the Commission. Research design and instrumentation were the responsibilities of the Commission staff. Field work for the study was supervised overall by the Commission staff and locally by nine attorneys retained for this purpose by the Commission. Actual data collection was performed by teams of college youth consultants to the Commission and by selected data collectors. Preparation of the basic data file was contracted to the Institute for Survey Research, Temple University. Finally, the authors, consultants to the Commission, designed the analysis format, performed the analysis and prepared this report.

Procedures

This study required a recording instrument which would facilitate retrieval of statistical data from a variety of official records for both adult and juvenile marihuana offenders in 18 separate jurisdictions. This requirement included a tolerance of variations in recording procedures and content. In addition, data recording procedures were required which permitted detailed analysis of each arrestee's progression through defined phases of the criminal process. These requirements, simultaneous flexibility and completeness, created unusual design problems; since the solutions to these problems could not be answered by previous research, the Commission fielded an unusually lengthy and detailed questionnaire. The instru-

ment used in this study is far more comprehensive than any used previously, and not all of the data have been analyzed in this report.

Construction of the recording instrument benefited partly from findings of earlier studies; but more generally, by consideration of theoretically possible variations in the processing of marihuana defendants. Certain portions of the original instrument were thus revised after procedural differences among the jurisdictions became apparent

during pretests of the instrument.

Selection of jurisdictions for this study involved a series of compromises between a concern for representatives, on the one hand, and opportunity of access, on the other. It was not possible, either in terms of jurisdictional cooperation or of the requirements imposed by time, to retrieve data from all jurisdictions in the country or even to sample them systematically. The criteria of timely access and the need for simultaneous data collection resulted in the selection of jurisdictions listed in Table 1. Although systematic sampling was not achieved, the selected jurisdictions provide considerable heterogeneity in size, region, population characteristics and jurisdictional procedures and policies. These selection procedures provided a population of 3,071 arrestees, 2,491 adults and 580 juveniles.9 The respective contribution of each jurisdiction to the study population is shown in Table 1.

Data were collected for the study in the summer of 1971 by teams of interviewers, organized and prepared by the Commission to examine police, prosecutorial, judicial and probation records in each jurisdiction. Each team was supervised by an attorney familiar with the jurisdiction and its law enforcement agencies. Team supervisors met initially with the Commission staff to develop uniform collection procedures and to identify areas of data collection where jurisdictional variations required additional attention. Each team supervisor was responsible for pretesting the instrument

⁸ See questionnaire, Appendix A, infra page 695.

The terms "adult" and "juvenile" are used in this study to refer to that segment of the criminal justice system which ultimately disposed of the case. These designations were easily determined in almost all cases. In two kinds of situations, however, the adult-juvenile designation was unclear. In some situations, a case began in the adult system, either because the arrestee's age was not determined or because the prosecutor exercised discretion to utilize the adult system for arrestees of certain ages, and was later referred to the juvenile system. In this study, such cases are designated as "juvenile." In other situations, cases began in the juvenile system and were later transferred to the adult system by the judge under a statutory provision permitting "waiver of jurisdiction" for certain offenses. In this study, such cases are designated as "adult."

Table 1

Rural Virginia (Charlottesville Albemarle County, Green County) Louisa County, Madison County)	all cases	18	. 17	1
<u>Total</u>		3,071	2,491	580

¹⁰ In the process of selecting jurisdictions, the Commission staff viewed the Washington Metropolitan Area as a single entity, but expected to find divergent enforcement patterns in the suburbs as compared to the District. Depending on how finely one wishes to analyze the data, the area represents seven discrete jurisdictions or three less well-defined jurisdictions (Maryland suburbs, Virginia suburbs and Washington). To facilitate analysis, the latter approach is utilized.

¹¹ In the city of Chicago, the sample was drawn by selecting every tenth marihuana-related case from the chronological log of arrests compiled by the police. This procedure was followed only for arrestees initially processed as adults. Juvenile records are indexed at the police level only by name. Since there was no chronological or substantive separation of files, it was impossible to identify the universe of juveniles arrested for marihuan offenses during a specific time period. Accordingly, arrestees entering the system as juveniles are not included.

²² Other than the City of Chicago, Cook County includes 119 municipalities, each with its own police department. The residual area of the county is under the jurisdiction of the County Sheriff. To compile the universe of arrestees in Cook County, each case in the County Sheriff's files was analyzed. With regard to the municipalities, the Commission requested each Chief of Police to photocopy the arrest record of each person arrested for a marihuana offense during the survey period, indicate the disposition of each case, and forward the information to the Chicago

supervisor. With the cooperation of the County Sheriff, 92 of the suburban jurisdictions (77%) reported. Thirty-five (38%) of the reporting jurisdictions indicated that they had made no marihuana arrests during the survey period.

in each of the sub-jurisdictions of the Southern Judicial District of San Mateo County: Atherton, Menlo Park, Redwood City, San Carlos and the unincorporated areas under the jurisdiction of the County Sheriff and the California Highway Patrol. In each of the municipalities, the universe was compiled from the chronological contact log. However, since neither the Sheriff nor the Highway Patrol maintain such a cross-reference system (files are kept alphabetically) the sample was drawn from individuals who were booked (charged).

¹⁴ The Tucson (Pima County) sample consisted of a random sample of one-third of the marihuana-related arrests made by the Tucson Police Department. During the survey period, 381 persons (256 adults and 125 juveniles) were arrested for marihuana-related offenses.

¹⁵ During the survey period, the Omaha Police Department arrested 128 persons (113 adults and 15 juveniles). The sample consists only of the adult cases, since the juvenile records were inaccessible.

¹⁶ Since the number of cases in the rural Virginia universe is so small, no further reference will be made to this jurisdiction.

in his jurisdiction, obtaining access to relevant police and court records, and supervising the actual data collection and recording. In addition, the supervisor was responsible for interviewing a select number of law enforcement personnel within the jurisdiction.

Data collection teams in each jurisdiction followed a series of guidelines drafted by the Commission staff to insure uniformity. In each jurisdiction, for example, police records were examined first in order to define the universe of persons arrested within the survey period of July 1 through December 31, 1970. This period was thought to offer the most current data with the minimum number of pending cases.

Methodological Problems

A number of caveats concerning the procedures followed in this study affect the interpretation of findings and should be identified. First, the procedures in selection of jurisdictions may limit the extent to which observed patterns of law enforcement practices are representative of other jurisdictions in the United States. The absence of systematic sampling does not necessarily indicate that the patterns observed in this study are not representative or that this study's findings cannot be generalized to other, unstudied populations. The problem is that there is no assurance that such analytical procedures are appropriate. In a hypothetical study employing systematic sampling, the limits of representativeness and generalization are known. Therefore, the findings of the present study may not be characteristic of all marihuana defendants in the United States during 1970.

The problems associated with the use of police and court records are well known. Studies of criminal procedure must also be sensitive to interjurisdictional variation in the substantive law and in criminal procedure. Neither the criminal procedure nor the substantive criminal law is uniform among jurisdictions. At the time of this study, in some jurisdictions, for example, possession of marihuana was a felony; in others possession was a misdemeanor; in still others, the prosecutor could file the complaint as either a felony or a misdemeanor. These variations affected the charges which were brought, the informal dispositional

alternatives and the formal dispositional and sentencing alternatives. With respect to juveniles, the jurisdictions in this study tended to define juveniles as persons under the age of eighteen. 19

When significant jurisdictional differences occur it is necessary to determine whether such differences are attributable to variations in jurisdictional legal structure or to extralegal considerations. Analysis is complicated by variances in plea and termination procedures among district attorneys; these differences in procedure may determine the point in the criminal process at which the outcome

¹⁸ The marihuana laws of the sample jurisdictions provided the following penalties for possession and sale during the survey period (July 1, 1970-December 31, 1970):

State	Citation	Possession	Sale
Arizona	Ariz. Rev. Stat., Ann. Sec. 36-1001 to 1002.10, 1017 (Supp. 1969).	0-1 year in county jail/\$1.000 max.; or 1-10 years. 2d offense, 2-20 years.	2-10 years. 2d offense, 5-15 years.
California	Calif. Health and S. Code. Sec. 11530-11533 (West 1964), as amended (Supp. 1970).	County jail for 1 year max. or 1-10 years. 2d offense, 2-20 years.	5 years-life. 2d offense, 5 years-life.
Illinois	Ili. Ann. Stat., Ch. 38, Sec. 22-1 to 53 (Smith-Hurd 1964), as amended (Supp. 1970).	Less than 2.5 grams, 0-1 year/\$1,500 max.; over 2.5 grams, 2-10 years/\$5,000 max. 2d offense, less than 2.5 grams, 2-10 years/\$5,000 max.; over 2.5 grams, 5 years-life.	10 years-life. 2d offense- life.

of the case is decided and even the contours of the disposition. Since the principal interest is in describing general patterns without regard for insignificant variations, jurisdictional differences are identified only when they are of sufficient magnitude to alter overall patterns.

A similar procedure is followed with regard to adult-juvenile differences; adults and juveniles are sometimes examined separately, although they are grouped for some analyses.

FINDINGS 20

The results of this study are presented in three sections. The first describes the arrestees in terms of demographic characteristics, history of drug use and contact with law enforcement agencies prior to this marihuana arrest. The second section describes the circumstances under which the study population was detected and arrested, reviewing the use of investigations prior to arrest and the physical locations of these arrests. Additionally, the use of warrants, reasons for police presence, and the incidence of drug "buys" are examined. A third section describes post-arrest dispositions of these cases, focusing on both ultimate disposition and specific procedures followed in various phases of the criminal system.

The Arrestees

DEMOGRAPHIC CHARACTERISTICS 21

The typical marihuana arrestee is a young, white, single male who is a permanent resident of his jurisdiction and is either employed as a blue collar worker or is attending school.

A substantial majority of these arrestees are male (85%), white (77%), comparatively young (58% are under 21), and permanent residents of the jurisdictions within which they were arrested (77%). The data in Table 2 indicate that a majority of arrestees are unmarried (57%) and, at the time of arrest, were either employed or enrolled as students (70%). A minority of the arrestees (11%) was unemployed. The general youthfulness of the entire arrest population is indicated by the finding that five percent of all arrestees were 31 or older at the time of arrest. Among juveniles, over half (53%) were 16 or under at the time of arrest. Adult-juvenile differences show that proportionately more juvenile arrestees are female (25%), unmarried (91%), white (90%), permanent residents (88%) and students (78%).

With a few exceptions these demographic characteristics are uniform across jurisdictions. Although ten percent of all arrestees are age 16 or under, proportionately more persons in this age category are found in Maryland (27%) and in Dallas (25%). On the other hand, less than one percent of arrestees in Omaha (.3%) are in this age group. In regard to race, the majority of arrestees in all jurisdictions except one are white, ranging from 71% in Tucson to 94% in Maryland. The exception in racial composition is found in Chicago where 53% of all arrestees are black and 43% are white. By contrast, in Washington, D.C., 63% of arrestees are white and 36% black. The lowest incidence of black arrestees is found in San Mateo (5%) and Cook County (6%).

With regard to mobility,²² a majority of arrestees in all jurisdictions except one are permanent

4

²⁰ Although the findings described in the following pages generally involve quantitative comparisons, tests of statistical significance are not used. We have not employed such tests for several reasons. First, tests of statistical significance ordinarily require a number of assumptions pertaining to sampling procedures. Since we do not purport to have a random or even systematic sampling of marihuana cases, certain assumptions of these tests are not met, and the tests were therefore not performed. Second, this study is an exploratory effort, not a confirmatory one. The study produced a considerable body of data, and we have been selective in presentation of these data. The fact that statistical significance is also a function of the absolute number of tests (for example, statistically significant relationships would be found in five of every 100 tables by chance alone) reinforced our reluctance to use such tests. Third, we have attempted to avoid confusing statistical with substantive significance. Although we have attempted to identify both the existence of relationships, and their strength, we feel that in this area, statistical significance often may be confused with substantive significance. Not all statistically significant findings are of substantive importance. To avoid confusion concerning the criterion of "significance," we elected to omit statistical tests. Instead, we have used a guideline of 10 percentage points difference. In most groups a 10% difference is statistically significant, except in comparisons of populations of very small numbers. We have attempted to be sensitive to the size of n, and we have been reluctant to report relationships when the n's are less than 20.

ⁿ Various biographical data pertaining to each arrestee's gender, age, race, occupation and place of residence were ordinarily available. In two areas of demographic characteristics, however, pertinent information was often incomplete or unknown. Data concerning the arrestee's educational level were unknown in about 70% of the cases. Data concerning marital status were unknown in about 30% of the cases, and this information is reported here with the appropriate interpretation caveat.

²² Persons who were permanently employed and resided in the jurisdiction within which they were arrested were designated as permanent. Semi-permanent includes temporray residence such as college students and military personnel. Persons arrested in metropolitan areas, but who lived in suburbs of those areas, were designated as suburban.

CONCLUSION

The findings of this study indicate that many of the traditional assumptions and assertions about the enforcement of marihuana statutes are either erroneous or only partly accurate. These findings pertain to the demographic characteristics of marihuana arrestees, the circumstances of their detection and arrest, and the manner in which their marihuana cases are processed through the criminal justice system.

The Arrestees. The general demographic profile of the marihuana arrestee in this study is a young, white, single male who is a permanent resident of his jurisdiction and is either employed as a blue collar worker or is attending school. The data do not confirm previous speculation that persons who are black, Mexican-American, transient, and unemployed are overrepresented in the arrest population. Perhaps the most significant demographic characteristic of marihuana arrestees is their age. Of the more than 3,000 arrestees in the study population, only 5% were 31 or older.

These marihuana arrestees generally had no contact with law enforcement agencies prior to the marihuana arrest. The data suggest that the marihuana arrest constituted the initial experience with the criminal justice system, particularly among juveniles.

Circumstances of Detection and Arrest. About two-thirds of the arrestees in the study population were arrested spontaneously without any prior investigative activity. Spontaneous arrests were particularly common in the case of persons under 20, black, in school, or in a blue collar job, without prior criminal involvement. When marihuana arrests were preceded by drug or drug-related investigations, the investigations were usually short term and were directed toward marihuana rather than other drugs.

The marihuana-behavior precipitating the arrest was almost always possession. Ninety-four percent of all the arrests involved the seizure of marihuana from the possession or presence of an individual or group of individuals. In the remaining 6% of the cases, the arrests were precipitated by undercover purchases of the drug. Seizures at the time of arrest generally involved less than one ounce of marihuana; seizures of more than one ounce were documented in but 15% of all cases.

Similarly, the undercover purchases ordinarily involved an ounce or less.

Nearly all marihuana arrests were made by local officers. About two-thirds of the arrests occurred in outdoor public areas or in vehicles. Nearly all of the outdoor arrests were based on "simultaneous" offenses, where no investigative activity preceded the arrest. The reason most commonly reported for outdoor searches was "suspicious behavior" and the reason most often designated for vehicle stops was "suspicious circumstances." About two-thirds of all marihuana arrests involved the simultaneous arrest of two or more persons.

Most marihuana arrests did not involve the use of arrest or search warrants. Even among indoor arrests, over one-third were accomplished without search warrants, and this was particularly so in the case of very young arrestees.

The findings pertaining to circumstances of arrest suggest that substantial proportions of marihuana arrests are a consequence of fortuitous contacts with law enforcement officers: many arrests are made without investigative activity by the police, involve small amounts of marihuana and occur among persons with no prior criminal involvement and no present indication of major involvement with drugs.

Post Arrest Disposition. Three of every five closed cases were disposed of in the defendants' favor at some point between apprehension and formal trial. About 80% of juveniles and about half of the adults were "terminated" prior to trial. About one-third of the arrestees were sentenced after pleading guilty or being found guilty at trial. Two percent of the adults, and none of the juveniles, were found not guilty at trial.

The study jurisdictions differed in the proportion of cases terminated. Terminations prior to trial were most common in Washington, D.C., where 71% of the adults and 95% of the juveniles were either dismissed or released. Adult terminations were least common in Northern Virginia and San Mateo County, California (27%). Juvenile terminations were least common in Dallas (42%) and Northern Virginia (51%).

Nearly all adults, but less than half of juveniles were taken into custody after apprehension.

Nearly all adults arrested for marihuana offenses were also charged with those offenses. The specific offenses most often charged pertain to possession of marihuana. Of the adults charged, about 90% involved at least one possesion of marihuana charge and three-fifths of the adults were charged only with possession of marihuana. About 6% of the adults were charged with sale of marihuana.

Among juveniles, arresting officers recommended that a petition be filed in more than two-thirds of the cases. Despite, this, however, the appropriate authority chose not to do so for one case in four. Of the delinquency petitions filed, about 60% designated possession of marihuana as the reason for issuance of the petition. One-third of the juvenile petitions were dismissed after filing.

Among adults, about one in four arrestees was released on bail. Defendants were released on bail more often when the charge involved possession and less often when the charge involved sale of marihuana. The amount of bail set for most de-

fendants was between \$500 and \$1,000, and the amount of bail set was ordinarily higher for sale charges than for possession charges.

Of the more than 3,000 arrestees in the study population, 20% pleaded guilty and 17% went to the trial phase. Of the defendants reaching the trial phase, three-fourths were charged with possession of marihuana only.

Of all the persons initially arrested, 32% were sentenced. Four-fifths of these persons were convicted of possession of marihuana only, and 6% were convicted of sale offenses.

Sentences assessed varied by offense and jurisdiction. Incarceration was more often assessed to persons convicted of sale of marihuana or sale of other drugs than those convicted of possession of marihuana or possession of other drugs. Among persons convicted of possession of marihuana, about three-fourths were not incarcerated. Persons incarcerated for possession generally received sentences of one year or less.

E.4 Pre-Trial Motions

This chart will be coded in four parts:

- A. Motions to suppress evidence
- B. Motion to quash indictment
- C. Motion to challenge sufficiency of prosecutions prima-facie case
- D. Other Motion

Part A will be coded across in 4 sets of 6 columns. there may be 4 possible motions of this type. The first column of each set will code whether or not such a motion was made and if that motion was granted or not; if the motion was granted, the second thru sixth columns will code on what grounds it was granted from the last column of chart (5 possible grounds).

F. Motions at Trial

This chart will be coded in four parts:

- A. Motions to suppress evidence
- B. Motion to quash indictment
- C. Motion to challenge sufficiency of prosecutions prima-facie case
- D. Other Motion

Part A will be coded across in 4 sets of 6 columns. there may be 4 possible motions of this type. The first column of each set will code whether or not such a motion was made and if that motion was granted or not; if the motion was granted, the second thru sixth columns will code on what grounds it was granted from the last column of chart (5 possible grounds).

IF NO TRIAL MOTIONS AT ALL MADE CODE 9 IN COLS. 24-50

Eva Crider March 23, 1993 3-220-73-228

VALIDATION STATEMENT

When the National Archives acquired custody of this file, the accessioning procedures called for a manual comparison of the documentation to a printout of a portion of the records in each data set. This manual comparison is referred to as a "preliminary assessment" or "validation." The number of records which were compared varied from data set to data set. However, as a general rule the comparison involved less than ten records and was limited to only the first and last records in each data set. This is a statement of the results of the preliminary assessment or validation.

title: Marijuana Drug Enforcement Study

logical record length: 960

number of datafiles: 1

The user should note several discrepancies between a sample printout of the data and the documentation discovered during hand validation.

-Although the documentation refers to the data in terms of 80 character cards, all of the data about each case is contained in one record, with an identifying variable noting where each new 'card' begins.

-The documentation begins by listing the fields and variables for card 1. The first 80 characters in the sample dump, however, are noted as card 0. The codes for card 0 are on pages 106 and 107 of the documentation.

-The codes and variable listings for everything after card 10, position 72 are listed with the "recoded variables" beginning on page 99 of the documentation.

-While the documentation refers to the cards as 01, 02, 03 and so on, the sample printout records them as 1, 2, and 3 with a blank character in front of them. Thus, position 1 of a each card in a record is blank.

-In the first record in block 1, card 10 position 80 appears as 7 on the sample printout. 7 is not one of the accepted values for that position in the documentation.
