

Access Anywhere. Operate Anytime.

Copperstone's amphibious robotic rovers are built for the toughest environments – from mud, water, and ice to unstable terrain where people and traditional machines can't safely go.

HELIX Neptune Capabilities

- **All-Terrain Access:** Traverses hazardous and hard-to-reach locations with ease.
- **Unmanned & Safe:** Fully autonomous, eliminating risk to human crews.
- **24/7 Performance:** Operates continuously, day or night.
- **Search & Rescue Ready:** Equipped with imaging sonar and advanced cameras for SAR response.
- **Versatile Applications:** Supports monitoring, industrial, defense, and rescue missions.

Mission Unstoppable

Effortless Transition
From Water to Ice.

HELIX Neptune
Operating at Night.

Sonar Imaging.

ROV Deployment.

When terrain becomes impossible, Copperstone makes it possible.

Our amphibious rovers are built to bridge the gap between human limitations and environmental extremes, enabling safe, reliable access where it's needed most. From disaster response to industrial operations, they transform risk into opportunity by delivering the reach, resilience, and data required to act with confidence in any environment.
