

Operating Your Remote Mast

- Initial Setup: Using the controller, run the stand to lowest height. Then using the manual adjustments adjust microphone for your shortest speaker. This allows for 12" of vertical adjustment for taller speakers.
- Stands are built with 12" of motorized travel. Take care to let off the switch when limit is reached. (*Continuing to push the switch when the stand is at its lowest or highest limit will eventually damage the inner flexible coupling.*)
- When *moving* the stand, take care not to grip it by this portion. Lifting by this portion can damage the inner coupling. Please handle by the area indicated on the stand.
- To minimize noise, adjust height before you turn on the microphone.
- If using our battery pack, make sure to switch to the ON position while charging.
- Please visit our FAQ page for more information.
