

Notice-To-Pilot

POWERED BY THE HELIPORT SAFETY ORGANIZATION

- Notice-To-Pilot (NTP), is a free safety reporting system developed by the Heliport Safety Organization that allows helicopter pilot to report hazards at private FAA registered heliports and HSO registered landing zones.
- Our safety reporting system starts where the U.S. NOTAM system stops. Allowing helicopter pilots to self report and manage hazards at heliports and landing zones across the country in real time.
- Our centralized system standardizes reporting and provides the necessary platform to share safety of flight information throughout the industry.
