

Empowering Africa's Future Through Tech Excellence

Nigeria Market Partners:

Our market drivers include the First Sovereign Cloud Virtual Infrastructure with AUST as the first pan African University experience Centre that has Learning Management Systems on various training modules in ICT/ rTML (real Time Transactional Machine Learning) + Gen AI with International training modules and Certifications (Certiport and CISCO) in Beginners/ Intermediate / Advanced levels and specialized modules in Xenese.

In less than one year our youth can be equipped with certificates that can earn them jobs in data analytics, next generation digital skill sets, plus capabilities to build apps in our Xenese™ Studio without skill sets in coding.

At the community level - Oba in Anambra state is the first community in Africa with such foundation which other communities can easily leverage to pull out their youth from the streets and empower them to unlock their untapped potential.

PROGRAM PARTNERSHIP

AUZZIIO Consult Nig Ltd. has combined forces with partner First Genesis, Inc. (USA) to bring cutting-edge innovations to revolutionize digital infrastructure.

Focus Areas

- Digital Education and Skills Acquisition.
- Engineering and Digital Public Infrastructure.
- E-Government and Smart City Systems.
- Telehealth and Digital Healthcare.
- Financial Platforms, Cross-Border Transactions, and the Digital Economy.

The collaboration drives end-to-end solutions ranging from high-speed connectivity and state-of-the-art data centers to innovative digital services with Distributed Cloud Computing.

PROGRAM HIGHLIGHTS

01

MASTER THE CUTTING EDGE

Specialized modules in Gen AI and rTML (Real-Time Transactional Machine Learning).

02

GLOBAL CREDENTIALS

Earn international certifications from CISCO and Certiport

03

ZERO CODING, TOTAL CREATION

Build powerful apps in our Xenese Studio—no coding experience required.

04

PATHWAYS FOR EVERYONE

Beginner, Intermediate, and Advanced student levels available.

Xenese™ is a distributed intelligence fabric designed by First Genesis, Inc. to make enterprise AI operational, predictable, and auditable without the need for heavy engineering or data science resources.

By integrating directly with data across edge and cloud environments, it addresses the "black box" problem of modern AI—providing visibility and control where traditional systems lack transparency.
