Peter ,I found my work sheet that I believe is what I talked about with a few of your members when we met on the jetty here is what I had come up with

- mobilization and demobilization
\$6,500
 - remove approximately 30 percent of existing unsuitable stone and remove from site
 - replace with regulation size armor (approximately 3500 Lb or larger angular stone
 - reshape groin using existing and new larger stone having a semi flat walking area on top
 - clean up and restore area to original condition
- Budget numbers for this work approximately
\$155,000.

This is the number that I spoke about with your group, I hope this helps , the number would be a couple bucks more today, Stone prices have gone up trucking costs have gone up as well. Let me know if you need any more assistance.
