PROTECT	PROVIDE
Declare a climate emergency using presidential powers under the National Emergencies Act, Defense Production Act, and Stafford Act.	Support a Constitutional Green amendment to guarantee the right of all people to clean air, land, and water
Implement executive actions to accelerate national and global climate initiatives. This would allocate \$650 billion annually to bolster renewable energy and clean transportation technology,	Invest in renewable energy infrastructure across the nation, including wind, solar, tidal, geothermal, battery and energy storage, and green hydrogen for limited uses where appropriate
Reduce the size and budget of the military, as hyper-militarized foreign policy and military-dependent domestic economy are major contributors to the climate emergency, while also ensuring the military transitions to green energy	Expand and transform the American Climate Corps into a public agency that employs millions for ecosystem restoration, climate damage mitigation, and renewable energy development
Establish a moratorium on funding, constructing, and operating false climate solutions including carbon capture and sequestration, carbon offsets, cap and trade, biofuels, hydrogen combustion, “renewable natural gas”, waste incineration, and other forms of geoengineering	Create millions of well-paid union jobs that foster economic sustainability.
Address the crisis of contaminated water supplies with national efforts to remove lead, PFAS, and other toxins from our water	Provide clean baseload power using responsibly sourced energy storage technologies that capture renewable energy surpluses
Phase out nuclear power, a dirty, dangerous, expensive, and uninsurable unneeded technology, and ensure no new nuclear energy facilities are constructed	Build a nationwide, publicly-owned smart electricity grid
End all forms of subsidies to the fossil fuel industry	Prioritize disadvantaged and other environmental justice communities with 60 percent of green investments and climate justice projects
Rescind toxic provisions of the Inflation Reduction Act including those that provide subsidies, direct payments, and other forms of financial assistance to the fossil fuel industry, and provisions to fast-track the Mountain Valley Pipeline	Take the energy industry into public ownership using a democratic federated structure, with municipal and regional utilities
Codify and implement the 17 Principles of Environmental Justice and require all federal agencies to be trained in, and implement the Jemez Principles for Democratic Organizing	Fund full climate reparations to developing nations as part of a Global Green New Deal
Prioritize energy efficiency and conservation, require new buildings to demonstrate zero emissions by 2035 and retrofit existing buildings as part of a larger plan to phase out all existing gas hookups	Fund social housing as part of the Real Green New Deal to build at least 15 million green, union-built, publicly-owned homes over the next 10 years
Suspend offshore lease operations, and decrease fossil fuel imports, exports, and investments in international fossil fuel ventures.	Fully fund and strengthen the Environmental Protection Agency and the Department of the Interior and superfund site cleanup

Reinstate the crude oil export ban revoked in 2015, equivalent to shutting down 42 coal plants	Take all railroad systems into democratic public ownership, including freight, commuter, and high-speed rail
Create an Office of Climate Mobilization to coordinate policy changes and other needed interventions to eliminate greenhouse gas emissions and ultimately achieve climate justice	<u>Build an electrified coast to coast high-speed rail and local Solutionary Rail</u>
Ban all forms of fracking, mountaintop removal, tar sands mining, and new fossil fuel infrastructure	<u>Ensure a Just Transition for workers shifting from the fossil fuel and other extractive and polluting industries to alternative work of their choosing</u>
Achieve 100% clean renewable energy and zero-to-negative carbon emissions by no later than 2035	Invest in geothermal energy infrastructure
Ensure all climate solutions are global in scope	Subsidize installation of heat pumps to replace fossil fuels for heating and cooling
	Establish a Federal commission to deliver justice for residents of Cancer Alley, including recompense for all residents impacted by decades of environmental racism
	Incentivize circular economies and zero-waste manufacturing
