Reportable Safety Issues

6 ▲

- ▲ **Significant quality increases in production of diverse characters in comparison to first quarter.** Decrease initially at inception of v6 with improvements over time and additionally improvements as personalization engine stabilizes.
- 207 days completed, as of June 30, 2024. 1 year into the project total.
- ▲ **Marked increase in reportable safety issues (nude women specifically) over prior periods.** 4 this month alone over 2 total in all prior periods.
- Graded pass / fail on initial & subsequent reprocessing. Explicit direction nearly always improves results, however default bias is ultimately harmful and we seek to continue to improve baseline results.
- Data gaps between Feb & May likely drive performance dip during that period as volume is significantly low.
- V6 included in project as of January 2023; enhanced personalization engine mid June 2024.
