

CRAWLER EXCAVATORS

RIPPA

	Operating Weight lb. (kg)	Rated Power Gross hp (kW) @ rpm	
NDI 320	65,036 lb. (29500kg)	271 hp	(202 kW)
NDI 420	88,184 lb. (40000kg)	317 hp	(237 kW)
NDI 520	110,231 lb. (50000kg)	345 hp	(257 kW)

Lifting Capacity

Lift more weight with each cycle and complete the job faster with Rippa excavators designed and tested to maximize lifting capability. With an optimal swing radius, lift height and tilt position, you can lift and place loads and dig with greater productivity.

Swing Torque

New Rippa models have an 8 to 11 percent increase in swing torque that allows the excavator to swing uphill with ease – and improve backfilling performance. That means less excavation time per foot of trench.

Fast Cycle Times

Two variable displacement axial piston pumps deliver superior cycle times while hydraulic flow regeneration maximizes efficiency.

Auto Idle

To reduce noise, improve jobsite communications and save fuel, the standard auto idle feature idles your engine automatically when machine functions are not used for a few seconds. When you move the controls, the excavator automatically returns to your previous throttle setting.

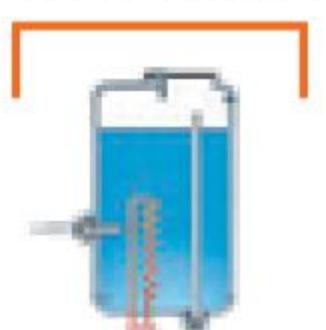

Auto Downshift

When turning, pushing and maneuvering, auto downshift reduces the hydraulic flow to the drive system – improving machine responsiveness and controllability. When the load decreases, the excavator automatically shifts back into high range.

Diesel Exhaust Fluid (DEF)

DEF is a solution of pure urea and deionized water. A minimum level of DEF is required for proper machine operation, and the DEF supply tank is heated for proper operation in cold weather. DEF is available from your Rippa dealer in various container sizes.

DEF Tank

X-Chassis Undercarriage

Get increased ground clearance and maneuverability in softer ground with the X-Chassis undercarriage design. The sloped surfaces also shed debris faster, reducing material buildup and cutting back your cleanup time.

DURABILITY / RELIABILITY

Like you, Rippa excavators are ready to keep at it until the job is finished. They're protected with solid construction and heavy-duty features that keep you running longer – so you can make more money working and spend less downtime in the shop.

D-Channel Frame Design

This innovative upper structure frame design adds strength to withstand more side shock, protecting your machine's vital components.

Air-to-Air Fuel Cooler

The air-to-air fuel cooler reduces fuel temperature to increase your machine's overall efficiency and protect engine components.

Split Cooling

The split cooling system allows the oil cooler and radiator to operate independently to optimize the hydraulic system and engine temperatures, even in severe working conditions. The system increases cooling capacity while protecting and extending the life of engine components.

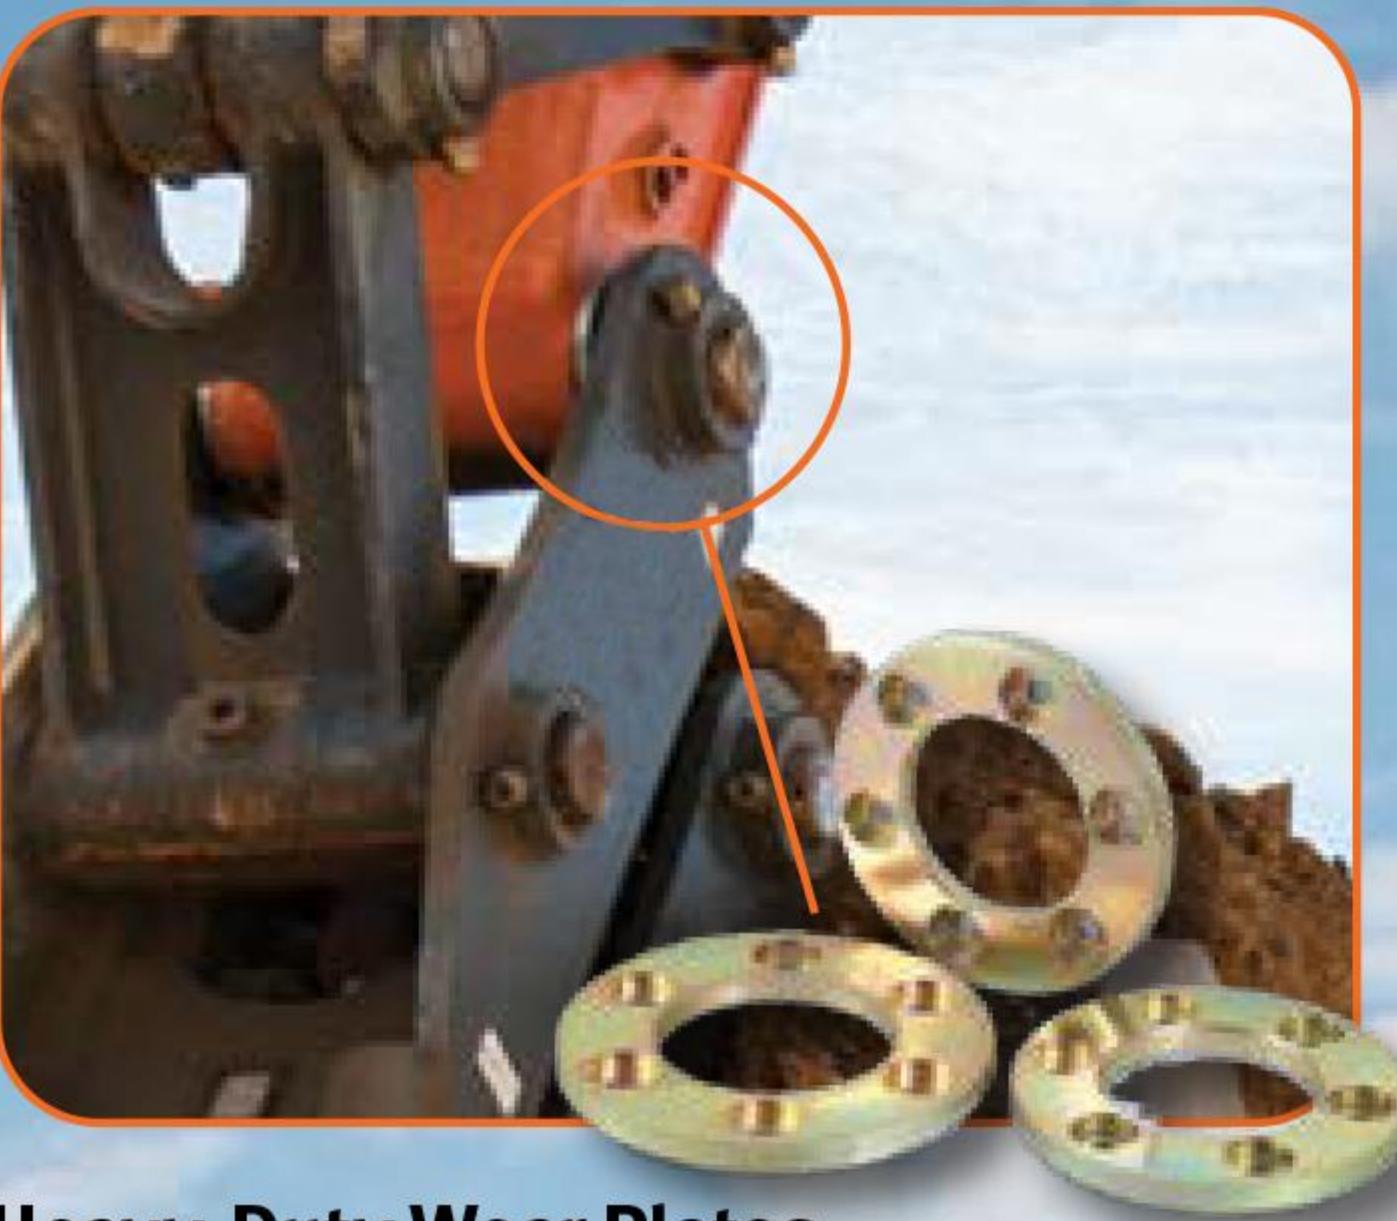

Variable Speed Hydraulic Cooling Fan

The hydraulic oil cooler on the DX300LC-5 and larger machines utilizes the variable speed cooling fan. The speed of the fan changes as required by the demands of your excavator. In tough, difficult applications, the fan runs faster for optimized cooling. When you're in lighter duty conditions, the fan runs slower to increase efficiency and reduce noise.

Automatic Belt Tensioner

A spring-applied automatic belt compensates for regular wear and maintains a constant tension on the engine accessory belt.

Heavy-Duty Wear Plates

Ultra-hard and wear-resistant, these plates at the end of your arm and H-link extend the service intervals for your bucket pin-up point. By minimizing the tolerance between the bucket and arm, they maintain high breakout forces and ensure greater productivity.

Permanently Sealed, Lubricated Track Pins

Pin links on Rippa excavator tracks are permanently sealed. They never need greasing. That means you reduce your operating costs and increase your uptime.

Recessed Drive Motors

Drive motors contained and recessed within the track width are protected from potential damage, resulting in more uptime.

Cast Ends and Pin Bosses

All the major pin points on the boom and arm are castings for extra strength in tough working conditions. Plus, additional reinforcement around the bosses and internal gussets gives a long life for the workgroup.

OPERATOR COMFORT

An operator can't push performance to the limit if the cabin isn't comfortable. Doosan knows how essential comfort is for its operators. From its great visibility to its deluxe, adjustable seat, Rippa cabins are easy to enter and exit, give you awesome standard features and bring superior comfort to the job.

Visibility

Sightlines to the work group are essential to operator performance. The large Rippa cabin provides an excellent viewing area on the front and side windows. When loading trucks or working overhead, the overhead window gives you great visibility above the machine. Narrow corner pillars, small

window joints and a wiper mounted on the pillar – instead of on the glass surface – give the operator a better view. Sun shades on the front and top windows shield operators from the sun and reduce eye strain. It's a complete visibility package that allows you to focus on your work instead of struggling to see it.

Other Cabin Features

- Improved floor space for your feet; increased cab space for your legs, arms and head
- 180-degree swinging door
- Wide entry/exit area
- Grab handles
- Standard radio and antenna
- Standard CD player and MP3 player input
- 12V power port
- Adjustable side window openings for fresh air

Quiet Operation

A complete, sound-isolating cabin seal reduces the noise inside the pressurized cab to an extremely low level. Compartmentalized components reduce noise output outside the cab. Even the cabin frame and seat are designed to absorb vibration and significantly increase operator comfort.

Adjustable Comfort

The standard air suspension seat has multiple adjustment points, allowing you to select the most comfortable position.

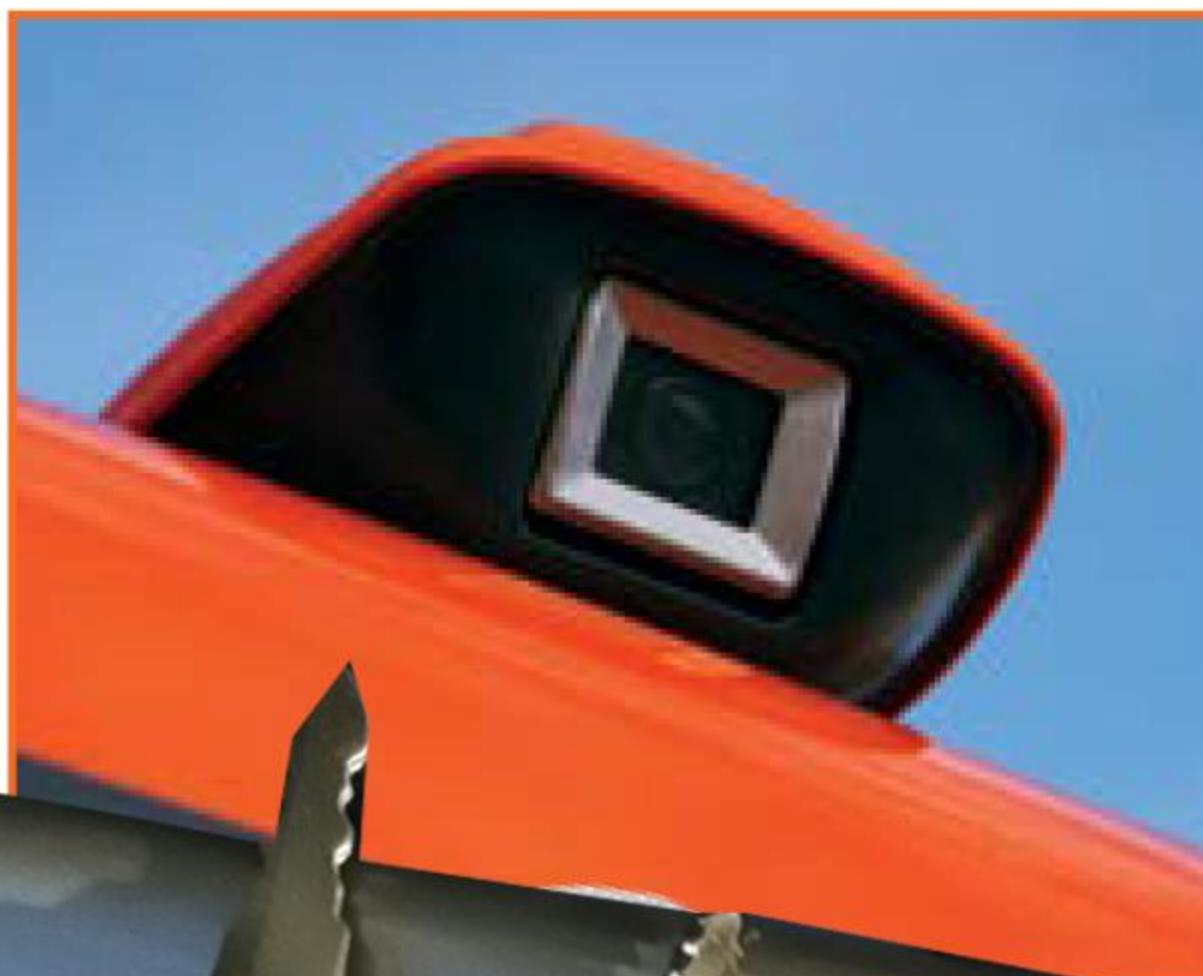

- A** Control Stand/Seat Base Fore/Aft
- B** Control Stand/Seat Move with Suspension
- C** Control Stand/Seat Height
- D** Seat Fore/Aft
- E** Seat Cushion Fore/Aft
- F** Seat Cushion Angle
- G** Back Recline
- H** Lumbar Support
- I** Headrest Fore/Aft and Up/Down
- J** Control Stands Up/Down
- K** Seat Heater

Automotive Style Heat and Air Conditioning

High-capacity heating and cooling vents and an easy-to-control temperature keep you comfortable all year long. Automatic temperature control senses and adjusts to the temperature setting. A memory function returns it to your preferred temperature if you shut the machine off and restart later.

Standard Rearview Camera

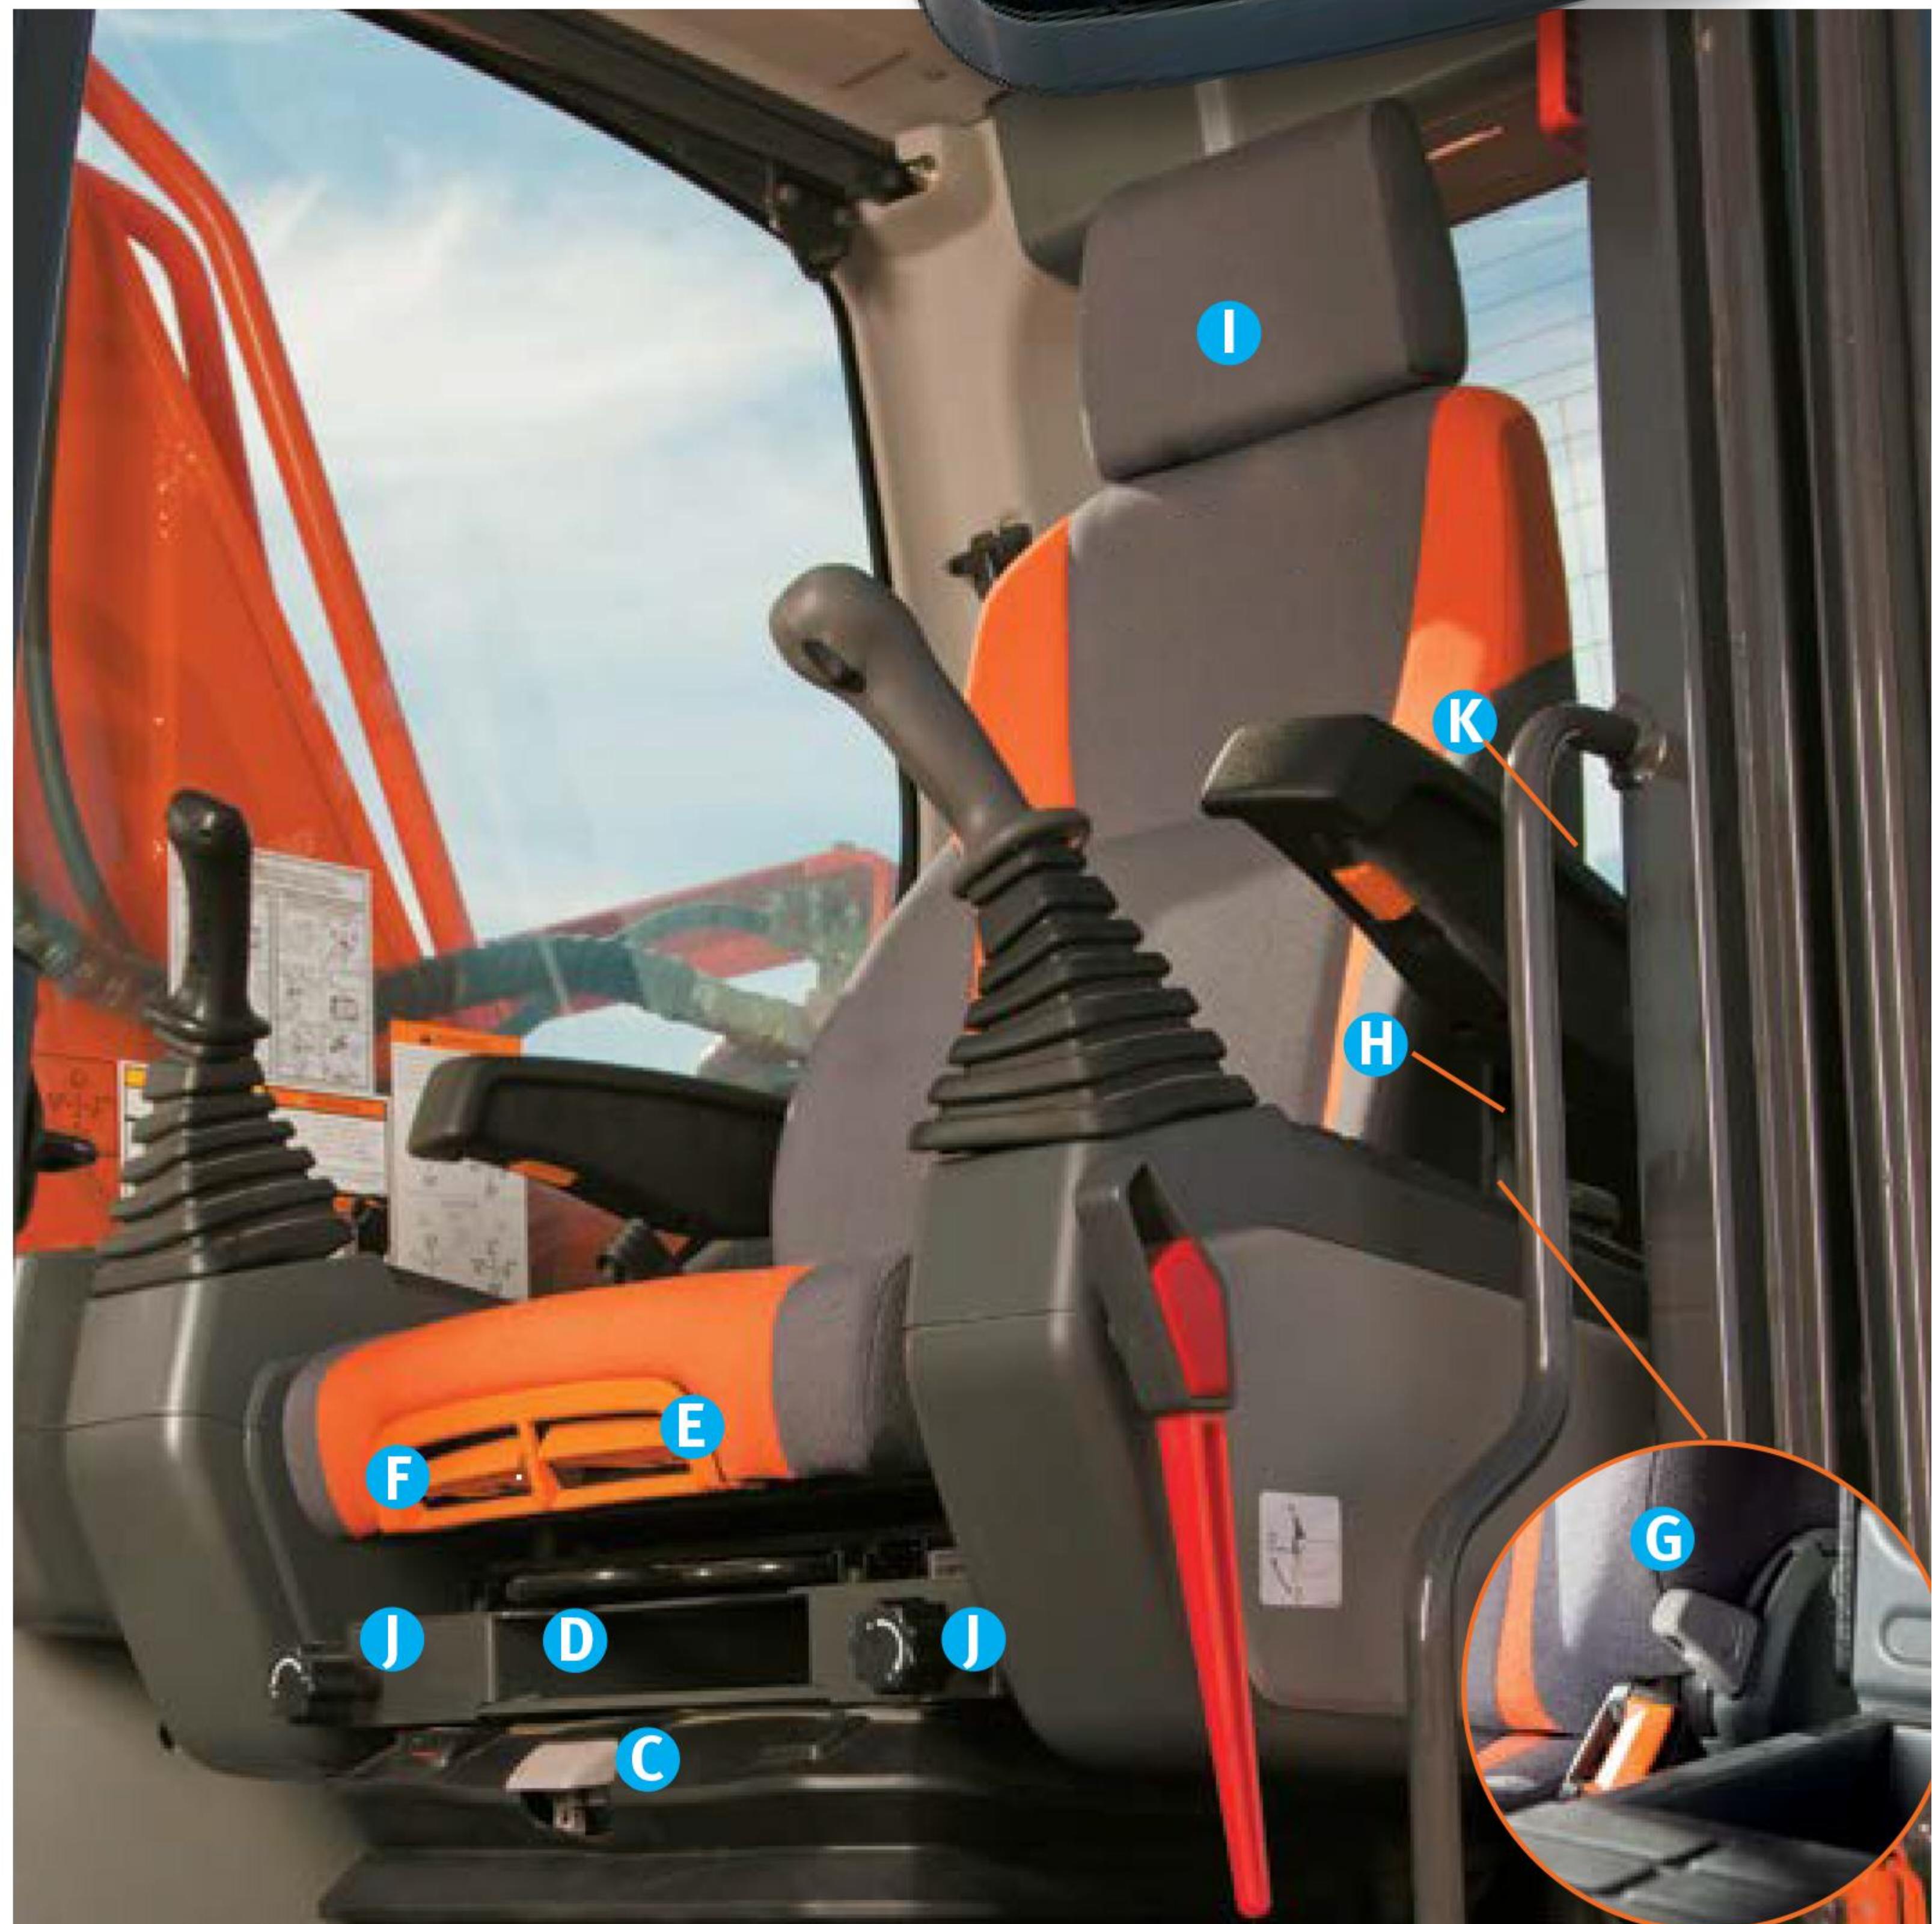

Provides the operator with an additional means to view the machine's surroundings, allowing for increased productivity.

Easy-to-Read

LCD Display Panel

An easy-to-read LCD display panel is placed within easy view for monitoring critical machine data as well as viewing errors, warnings and the rearview camera display. A big, 7-inch display also switches to a night view. The improved monitor allows operators to review key parameters while viewing the camera display.

EASY MAINTENANCE

Even the best equipment needs regular maintenance. When it's time to take care of your excavator, Rippa makes it easy with onboard diagnostic systems, easy component access plus a standard fleet management system. If you want a long-lasting machine and minimum effort to get it, Doosan delivers everything you need.

Easy Component Access

All Rippa excavators provide ground level access to all filters and easy access to regular inspection points. Access panels are easy to find and open from the top, bottom and sides of the excavator. A large engine bonnet provides plenty of room to reach the top side of the engine, while a hinged belly pan allows access from the bottom. Solid steel side panels provide access to regular daily maintenance items which makes for quick, easy service and a lower cost of operation.

Anti-Skid Plates

The star-shape punched holes in the anti-skid plates provide enhanced access during maintenance.

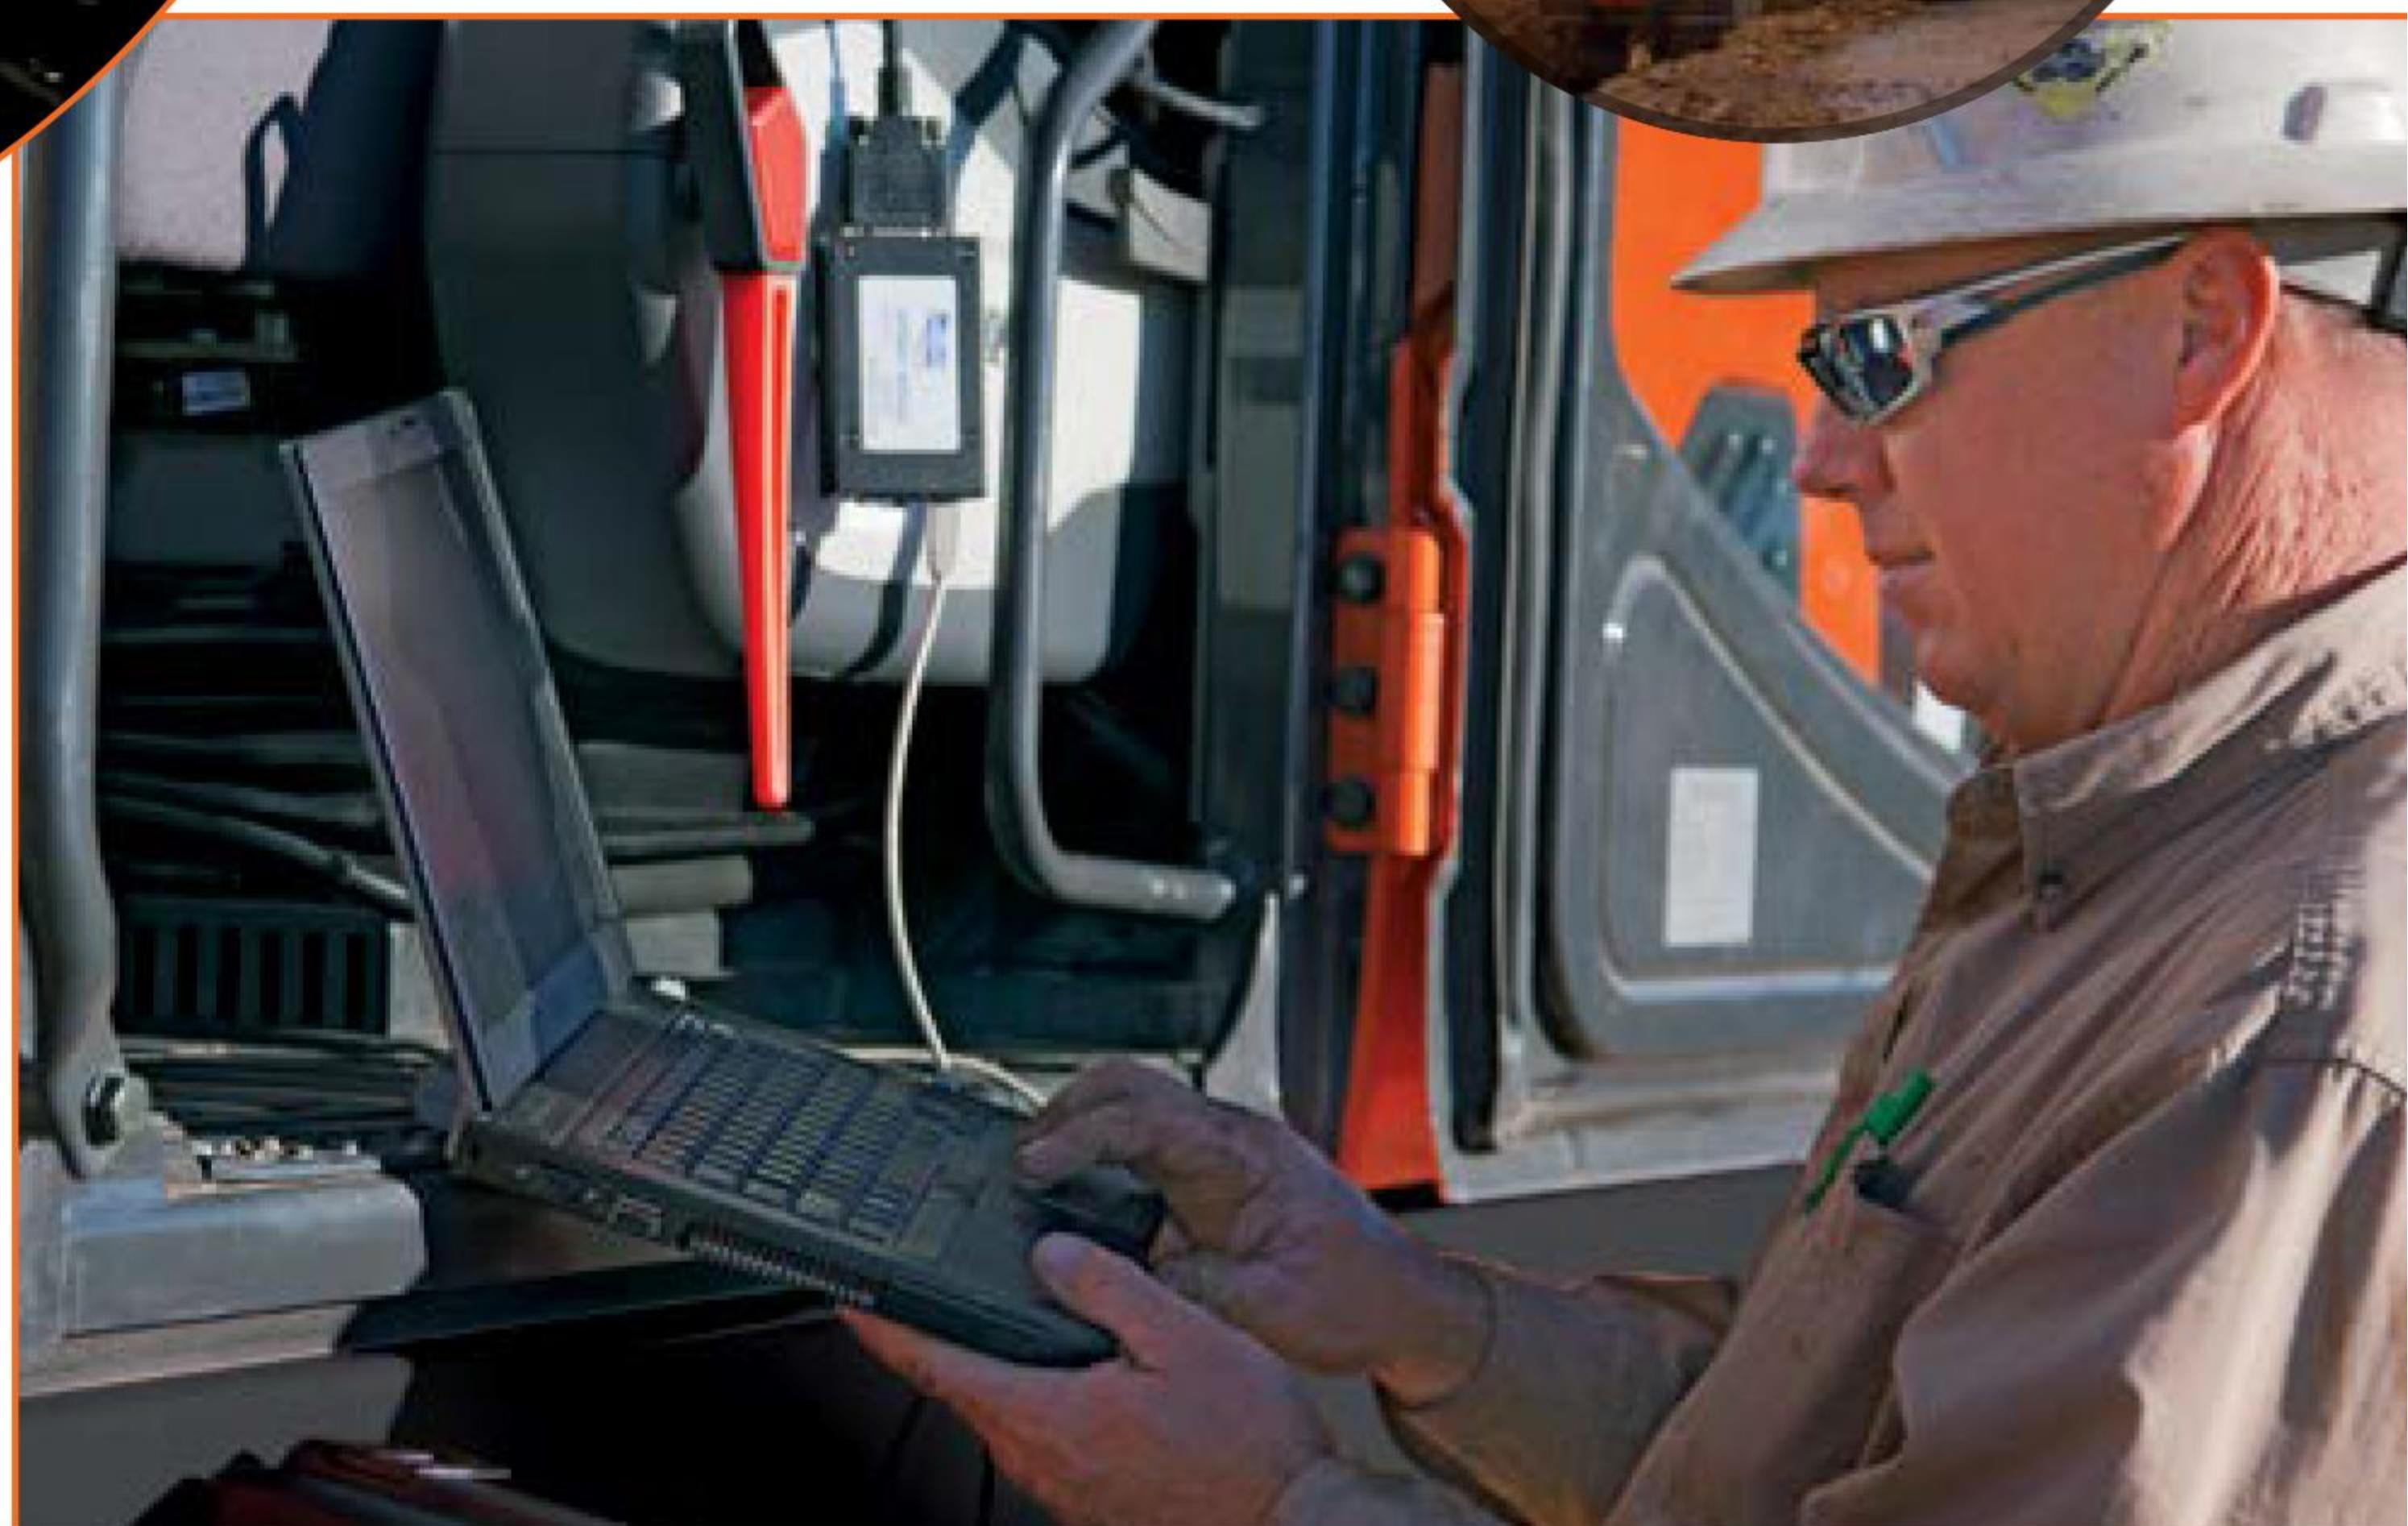

Rippa Telematics

Rippa's Telematics provides machine intelligence through a device that comes standard on all Rippa machines. The device communicates wirelessly through either cellular or satellite communication. Machine information can be viewed via the CoreTMS website, which then allows you to assess various aspects of your Doosan machine.

Key benefits include:

- Review maintenance schedules
- Maximize machine utilization and uptime
- Improve operator efficiency and training
- Monitor fuel use and efficiency
- Receive theft prevention alerts

Oil and Filter Life

Easily review the hours since the last maintenance for oils and filters. Your machine will remind you when each oil and filter needs replacing 10 working hours before service is due, assisting you in regular maintenance scheduling.

Centralized Arm and Boom Grease Points

Daily maintenance is critical – and it's simple with the centralized grease banks on the arm and base of the boom.

Emergency Stop Switch

The relocated emergency stop switch is now within easy access from the exterior of the machine.

Rippa Monitoring System with Laptop Access

The Rippa Monitoring System is a diagnostic program that gives your dealer's technician a direct communications link with your excavator. During operation, it monitors all critical data and provides a complete history of operation and a real-time log of machine failures. Armed with information like this, your dealer service personnel can fix issues faster – and you can get back to work.

Auxiliary Mode Switch

If needed, an auxiliary mode switch allows you to finish a job or move your excavator to a convenient location for service.

Self-Diagnostics

The LCD monitor helps you monitor critical systems in real time. Plus, you can access historical machine alerts right from the screen in the cabin.

VERSATILITY

Bucket

Clamp

Rippa attachments are designed to match the excavator load ratings and hydraulic performance.

Selectable Work Modes

Four unique work modes enable you to tailor your excavator's performance to the work in front of you. Two modes recalibrate machine power for digging or lifting. Two change the auxiliary hydraulic flow for specific types of attachments. Just change a few settings with the LCD display panel to quickly optimize performance and protect your hydraulic components.

Digging Your default setting delivers the performance you need for general excavation, loading and lifting. The four power modes give it a huge range of versatility for many different digging applications. NOTE: SPC only works in digging mode.

Lifting The increased pump torque, low engine rpm and automatic power boost provide extra muscle when lifting materials – like pipe or concrete barriers.

*Hydraulically Limited

- Load point is the end of the arm.
- Capacities marked with an asterisk (*) are limited by hydraulic capacities.
- Lift capacities shown do not exceed 75% of minimum tipping loads or 87% of hydraulic capacities.
- The least stable position is over the side.
- The total mass of machine includes the mass of the boom, arm, counterweight, all operating fluids and 165 lb. (75 kg) operator.
- Lift capacities are in compliance with ISO 10567.
