size generator

RT-1 Powerhouse Generator Jump Cart

The mobile, self-charging 24V DC-3300 CCA jumper cart that can immediately jump start the largest (2+ megawatt) generators multiple times over!

How does it work?

Unlock, roll and deliver a "Powerhouse" punch!

When you're "on the ropes" facing a mission critical emergency, the solution is in-house, ready to roll and with the POWER to immediately jump-start any generator. With the self-charging, 24V DC-3300 CCA Powerhouse Jump Cart on site, one person can roll it over to any size generator, plug in the 25-foot cable and "POW!" quickly jump-start any size generator. Even the largest at 2+ megawatts. Once the generator has restarted, the cart may be left connected indefinitely while the generator is running. The RT-1 Powerhouse features a built-in control panel with a power-on indicator built into the on/off switch. Plus, a red internal charger light and a green jump start ready indicator light. The cabinet houses six high powered VRLA batteries wired at a 24VDC buss and will operate from any 110V AC outlet.

Saves you time and money

The Powerhouse Jump Cart dramatically reduces the downtime due to a starter battery failure, the expense of service technicians and eliminates the need to jump out batteries for long periods. By connecting the Powerhouse Jump Cart, the problem of non-start can be easily diagnosed.

Features at a Glance

- Built-in self charging guarantees fully-charged ultimate power
- Rolling work station reduces labor costs, OSHA violations and lifting injuries
- Control handle for steering ease*
- Control brake designed for easy modulation, allowing from slight drag to full stop/lock
- Industrial-quality castor mounted wheels*
- Washable non-slip heavy duty customizable mat covers cabinet surface
- 10 ft. AC line cord
- Power-on indicator built into on/off switch
- Easy On / Off switch - Red internal charger indicator light, • Green jump start ready indicator light
- Cabinet houses six high powered VRLA batteries wired at a 24VDC buss
- Easy access doors to internal components
- Will operate from any 120VAC outlet
- Fabricated from heavy duty welded carbon steel, and is fully powder coated inside and out.
- 25-foot long jumper cable made of paired 1/0 highly flexible, stranded cable that is supplied and plugs into the cart through a large Anderson style connector

Dimensions:

34.5W x 16D x 37.25H (inches)

876W x 406D x 947H (mm)violations

Weight with batteries: 805 Lbs

* Designed to be rollable on interior flat, smooth surfaces. Not intended for use on grass, sand, gravel or any other unstable surfaces.

Top to bottom: Cabinet interior and control panel; Control handle, brake and jumper cabl
