

Volunteer Creel Survey for Lake Temagami 2022

As part of a new program, we are asking anglers to record some basic information on their catches while fishing on Lake Temagami. With your co-operation, the data collected will be released each year on May 1st as a detailed report on the fishery of Temagami corresponding to each of the 4 seasons. The report will summarize the number of fish caught by species, the percentage kept or released, the times of the year which were most productive, the average size of each species, CPUE's (Catch Per Unit Effort), and the amount of fishing pressure on the fishery itself. All of the information we gather will be submitted to The MNR and other interested parties. Over the years these reports will create an important record of fish populations, age classes, and biomass of Lake Temagami. This data can be used to better manage the great fishery we have for years to come, and also provide anglers with some helpful insight on best fishing times.

Please be as accurate as you can when filling out this survey. Although you may not have access to all of information requested below, please fill out as much as you can. The more information provided the better.

Sampler: _____ Bait (Circle one): Live Bait Air Temp: _____
 Date: _____ Artificial Wind Direction: _____
 Number of Anglers: _____ Both Wind Speed: _____
 Hours Fished: _____ Weather: _____ Bar Pressure: _____
 Time Period: _____ Water Temp: _____ Cloud Cover: _____

Legend: **WA** = Walleye/Pickerel - **LT** = Lake Trout – **SM** = Smallmouth Bass – **PI** = Pike – **WF**= Whitefish – **LH** = Lake Herring (cisco) – **B** = Burbot (ling) , Fill out a **K**- for kept or **R** for release.
