

FAQs

Is Exofreeze painful?

Exofreeze is generally well-tolerated, with most clients describing the sensation as a deep cold.

How many treatments are needed?

The number of treatments varies depending on individual goals and body composition. Consult with our experts for a personalized treatment plan.

Are there any side effects?

Common side effects include temporary redness or numbness at the treatment site, which typically subside within a short time.

How long does it take to see results?

Visible results may appear within the first session with an average of 2-3 inches lost within the very first session (this result varies by lifestyle and diet), with optimal results often seen after a series of treatments.

The Most Advanced Non-Invasive Tech

Exofreeze utilizes precise Peltier-chip cooling technology to target and eliminate fat cells without harming surrounding tissues. This makes it so that clients can resume their daily activities immediately after the treatment, making it a convenient and accessible option for busy individuals.

Exofreeze and You

Achieving your desired body shape is now more accessible than ever.

Exofreeze offers a personalized approach to fat reduction, tailored to your specific goals and body type.

Our experienced technicians will work closely with you to create a customized treatment plan that addresses your unique needs.

The Exofreeze Experience

Consultation: Our experts will assess your body composition and discuss your desired outcomes.

Treatment: Enjoy a relaxing and comfortable treatment session while Exofreeze works its magic.

Results: Experience a gradual reduction in fat deposits and a more sculpted appearance.

Maintenance: Maintain your results with a healthy lifestyle and follow-up treatments as needed.

Disclaimer: Individual results may vary. Consult with a healthcare professional before starting any new treatment.

What is Exofreeze?

Exofreeze is a revolutionary non-invasive body sculpting treatment that targets and eliminates stubborn fat cells. By utilizing advanced cryotherapy technology, Exofreeze delivers precise cooling to the treated area, triggering a natural process called apoptosis, which leads to the breakdown of fat cells.

How does it work?

The Exofreeze treatment involves the application of a specialized applicator to the targeted area. The applicator delivers controlled cooling, freezing the fat cells without harming surrounding tissues, resulting in an average of 2-3 inches lost on the very first session. Over time, the body naturally eliminates the treated fat cells, resulting in a noticeable reduction in fat deposits.

Benefits

- 8-10 inches lost in just a few sessions
- Non-invasive and painless
- No downtime
- Effective at targeting stubborn fat
- Precise and controlled cooling
- Customizable treatment plans
