

# MITIS HEALTH

Specialists in  
Medical Grade Virtual Desktops

## What is the MITIS Health Solution and how does it work?

Mitis Health offer a next generation remote reporting solution which allows you to stream hospital desktops to any remote location, like a radiologists home, without compromising quality, speed or security.

It works in a similar way to popular movie streaming services by streaming the data to a doctor in their home or remote location anywhere in the world.

### What are the benefits?

The MITIS Solution is an advanced streaming display protocol and not a traditional VPN solution, as such, you can harness some unique benefits:

- **IMAGE QUALITY** – images are Completely Lossless, No Loss in Fidelity and Exact Colour Table Replication
- **DATA SECURITY** – no DICOM studies or patient data leaves the hospital
- **CYBER SECURITY** – does not expose the hospital to virus, malware or malicious code from the home Radiologist
- **RCR and NHS ENGLAND COMPLIANT** – our trademarked Medical Imaging Display Protocol™ is the ONLY solution globally to conform to all standards specified by the Royal College of Radiologists and NHS England
- **HIGH SPEED** – no more slow transfers of large DICOM datasets, resulting in improved radiologist efficiency and faster turnaround times
- **REMOTE REPORTING** – tested over 1000s of miles/km away from the PACS/RIS Servers, so you can utilise capacity from anywhere at anytime

## Other VDI solutions vs Mitis Health

Traditional VDI solutions compromise quality, patient safety, patient data, cyber security and can reduce turnaround times.

We have designed our environment specifically for medical imaging and unlike other VDI solutions, we support the use of Primary Diagnostics.

The MITIS Health unique Medical Imaging Display Protocol™ is able to reproduce equivalence to an in-hospital reporting experience from a doctors home, wherever it may be, whilst retaining the same image fidelity, lossless imaging and colour table replication.

## Some of our feedback

“ We have felt the challenges of remote diagnosis for many years and Covid-19 has highlighted how current solutions in the market often do not address the very specific needs of a radiology department. Since using the MITIS solution we have been able to provide the high level of quality remote diagnosis with an in-hospital experience housed in a secure and easy to use solution.

MITIS Health presented our hospital with an easy to use and powerful remote reporting solution during Covid-19, when we needed it the most for our staff and patients. ”

Dr Andrew Gogbashian MBBS MRCS FRCR,  
Consultant Oncological Radiologist,  
Lead Radiologist for CT, Mount Vernon Cancer Centre

“ As a Clinical Radiologist with experience of working in a busy acute hospital setting, I understand what you need in a remote reporting solution to allow you to maintain the best care for patients, these include speed, ease of use, zero image degradation and complete data security.

It is important to know that wherever you are in the world you are able to offer the same patient care with no compromise on these requirements.

I have confidence that the MITIS Solution can provide all of this and conforms to the strict requirements of the Royal College of Radiologists and GDPR. In my view, this technology is a game changer for remote desktops and radiology reporting. This technology is the future. ”

Dr Ram Senasi MBBS MRCS FRCR, Radiologist within the NHS
