

Scientific Leadership & Advisory

FireGate Biotech Research Initiatives

FireGate Biotech is pleased to highlight the scientific advisors and program leadership supporting the company's early research initiatives. These collaborations strengthen the scientific foundation of FireGate's research programs as we advance our translational framework across multiple disease areas.

Key Program Leadership and Advisors

Dr. Yu Liang, Ph.D. — Program Lead, FG-003

Dr. Liang guides translational strategy and experimental design for FireGate's neuro-immune repair program. With more than two decades of experience in biomarker development, oncology research, and translational medicine, he has held leadership roles supporting multiple immuno-oncology and clinical development programs.

Dr. Aiping Bai, M.D., Ph.D. — Scientific Advisor

Dr. Bai provides expertise in immunology and antibody discovery. He has led immune-focused therapeutic development programs across several biopharmaceutical organizations, advancing immuno-oncology and immune checkpoint programs through preclinical and IND-enabling stages.

Dr. Andrzej Gajewski, M.D. — Scientific Advisor

Dr. Gajewski contributes guidance on clinical development strategy and translational research planning. He brings extensive experience in clinical trial operations, medical affairs, and investigator engagement across neurology, immunology, and oncology.

"We appreciate the guidance and perspective these scientists bring to FireGate as we continue developing the scientific foundation of our programs. Their experience across immunology, translational research, and clinical development is valuable as we advance our early research initiatives."

— **Daniel Rizzo**, Founder and CEO, FireGate Biotech

Current Research Framework

FireGate Biotech is currently operating in an early discovery and preclinical planning phase focused on developing its **Triplet Axis immunotherapy framework**, designed to integrate immune pathway modulation with targeted biological engagement.

As FireGate continues to advance its research programs, additional scientific collaborators, advisors, and members of the company's broader research network will be introduced at appropriate stages.

About FireGate Biotech

FireGate Biotech is a translational biotechnology company developing an integrated immunotherapy framework designed to restore immune balance while supporting tissue protection across complex disease environments. The company's research programs focus on chronic viral infection, oncology, and neuro-inflammatory disease.
