Non-users Members without a meter Pay Capital Improvements

The new water rates will take effect beginning March 1st 2023 with a new bi-monthly base water rate of \$127.50 plus a \$3.50 per 100 Cubic feet of water actually used. This will raise the average Members water rate by about \$20.00 per month. With the new rate increase we still continue to be one of the least costly water utilities in the area.

The rate increase was necessary to cover the cost the increase in the cost of water from the City of Everett. The cost of water from the City of Everett is slated to increase on January 1st of each year. This increase in water cost will therefore require the ASSOCIATION to similarly adjust our rates to supply water to our customers on an annual basis.

WASTING WATER POLICY

The Board of Trustees has also adopted a Wasting Water procedure as required for the renewal of the Comprehensive Plan. Wasting Water is defined as water on the customer side of the meter that is not corrected in a reasonable amount of time. If you feel that you may have a leak please contact the ASSOCIATION Manager for further assistance or direction. To remain in compliance with the Comprehensive Plan, the procedure adopted by the ASSOCIATION Board of Trustees is as follows:

Upon discovery of a leak on the customer side of a meter, the customer will be notified to repair the leak.

The ASSOCIATION will assess a fine of \$50.00 if the leak is not repaired within 60 days of the written notification.

If the same leak is not repaired with 90 days after notification, the fine will be increased to \$100.00.

If the same leak is not repaired within 120 days after notification, the customer's water service will be turned off until the customer can assure the leak has been corrected and any outstanding fines paid.

It is the responsibility of the customer to pay for any water that passes through the meter. This includes the water that was lost due to the leak on the customer's side.

The ASSOCIATION has a portable water leak detection device that helps determine if a leak exists. It can be used to detect if a leak is on the customer's side of the meter or the ASSOCIATION'S side of the meter.

Flushing of our water lines

Please be advised that our lines are flushed on an annual basis.

You will be notified prior to this event, which is scheduled during the early spring. Most of the flushing will occur between the hours of 9:00 am to 3:00 pm. Low water pressure may be experienced in the areas that are being flushed and some discolored water may be present.
